

LOWRY POPULAR N. U., SELECTION

New Grid Captain Real "Iron Man"

An aggressive and cool-headed football player who is a junior at Northwestern university, a young man who does as well in the classroom as he plays at the center position on one of the best grid teams in the United States, has been chosen to pilot the Purple machine for the coming year. He is Timothy G. Lowry, commonly called "Tim" on the Northwestern campus, and he is among the best students in the university.

Tim hales from Chicago and his home is at 1634 Kenilworth avenue. He is a Senn high school product where his name is written large on the scroll of honor but while Tim loves to recall his high school days, the thing he probably is most proud of is this: For two years he has played at center for Northwestern, in all, ten hard, grueling conference games, and never has been taken out of a game for disability or failure. He has played every minute of every game and as captain next year is anxious to complete a three-year period with it unsullied by untimely departures during a contest.

Lowry is over six feet high and weighs 185 pounds when in perfect condition. Besides playing football and making high grades in his classes, last winter Tim found time to participate with credit, in several varsity wrestling bouts at Patten gym. He is president of the Greek club at Northwestern and is fond of ancient classics. He is a blonde lad of attractive appearance, genial and friendly with his pals at the Wrangler House, which is his fraternity home. Steadily, according to the coaches, Lowry has advanced until some of the critics picked him this year as the all-conference center, although the majority voice was for Claypool of Purdue.

Whether Lowry becomes an all-conference center next year or not is not bothering him. What he is anxious to do is his best for Northwestern both as a student and participant in athletic sports, without special regard for honors or public recognition.

REAL ESTATE CONCERNS BACK CAPITAL PROJECT

Legislation by the present Congress to make possible scientific enlargement of the historic plan for the city of Washington is urged by the National Association of Real Estate boards in a resolution which has just been transmitted to all members of Congress. Real estate boards in more than 500 cities making up the membership of the association are asked to express to their own senators and representatives their support of the measure expected to come before the present session to provide for such an expansion.

The enlargement would carry out under present conditions of city growth the best of the original plan which George Washington had before him in laying out the city. That plan, conceived by the distinguished Frenchman, L'Enfant, has made Washington the first American city to have a city plan, and one of the most beautiful capital cities in the world.

Early passage of legislation providing for the best enlargement of the city's plan and for the extension of its parks is urged by the association lest the present rapid growth of the city in the absence of such a plan make its later adoption impracticable or impossible.

"Wherever we may live we feel that Washington belongs to all of us," the resolutions state. "The realtors of the United States have a deep interest in the proper physical development of our national capital and desire to express their support of any action which Congress may take which will make Washington a more beautiful city."

Wilmette Youth Prominent On Harvard Debating Team

Dwight W. Chapman, of 900 Elmwood avenue, Wilmette, a sophomore in Harvard college, and graduate of New Trier high school, was a member of the debating team which met the Amherst college team at Amherst Monday evening, the Harvard Debating council has announced. This meeting with Amherst was the first of the series of intercollegiate debates in which the Harvard team will take part this year.

Chapman is prominent as a debater at Harvard, being an active member of the Harvard Debating union.

Universality

UNIVERSAL telephone service must be universal in scope—it must reach anyone, anywhere. But it must be universal also in cost—it must be within the financial reach of everyone, everywhere.

Years of research have been required to provide the telephone instruments, switchboards, wire and supplementary apparatus which afford inter-communication between housewives, shopkeepers, farmers and millions of other American telephone users.

But these facilities do not in themselves make America's telephone service a universal service. Telephone engineers have spent years of additional study in order to build, maintain and operate this nationwide system so economically that the cost of service may be kept at all times well below its value to the telephone user.

Upon the two fundamentals or extensiveness in scope and economy in cost the Bell System has built the most universal telephone service in the world.

During the past few years much of the telephone plant in Illinois, originally erected at pre-war costs, has worn out or been outgrown, and has been replaced, at post-war prices for material and labor. This has added greatly to the average investment per telephone

In Appreciation

of the Prestige and Public Confidence
Enjoyed Throughout a Score of Years
the REO MOTOR CAR COMPANY
Offers Its New

Twentieth Anniversary Sedan

at \$1595 (Lansing plus tax)

It is not customary for a motor car manufacturer to offer a full-sized, attractive closed car on a time-tried, standard chassis of the finest quality at the cost of an open car.

But the Reo Motor Car Company has built well and prospered—and has had the unwavering confidence and esteem of thousands of Reo owners since the first year of its existence.

Appreciation of these good friends and of the good fortune that has marked every one of its twenty years has prompted Reo to celebrate its Twentieth Anniversary in this unusual manner.

And this is the only answer to the "How can they do it?" which greeted the announcement of the Reo Twentieth Anniversary Sedan at \$1595.
