North Shore New Field for Scott, Builder of Homes

Arthur Scott has just completed his new home on Fuller Lane and expects to move in immediately. It is of English type, built of stone and brick, located at 176 Fuller Lane.

Mr. Scott is one of the charter members of the Sunset Ridge Country Club and has been associated with the firm of V. J. Curtis and company for the past eight years. He has constructed several apartment and store buildings on the north side of Chicago, and is now building three homes in Wilmette at 47th Street and Spencer Avenue. He expects to devote his time in the future to home building on the north shore.

Mr. Scott has been attending the University of Illinois, and a daughter who will commence her first year in the New Trier High School in the fall.

The books are now open for box reservations in the new grandstand at the Illinois State Fair, and applications are being received by W. W. Lindley, general manager.

A telephone call or visit to our offices will quickly put you in touch with information regarding particularly choice living quarters available for October possession.

NEW HYDRAULIC STONE NOW USED IN BUILDING

Reconstructed Product Is Water and Fire Proof and Self Insulating

Much interest in building circles is centered in the product of the Hydraulic Art Stone company, a hydraulic reconstructed stone for general building purposes, which is waterproof, fireproof, self-insulating and which it is claimed may be used equally well for foundation work or for above ground construction.

It may be had in a variety of colors and styles of face, including a splendid imitation of the granite marble. It material equally suited for limestones, houses and apartments, factories and clubs, as well as for decorative purposes. It may be used in a solid wall or as a veneer.

Concrete, subjected to a most terrific hydraulic pressure, after the removal of the reconstructed stone has been treated to render any of the scores of possible designs required by the builder, eliminates the need of the stone, were required for the formation of natural stone, which is equivalent to less beautiful and it is claimed less substantial than the reconstructed stone.

The new plant, producing this product is being started at a large quantity to meet the ever increasing demand, is located at Hill Park, near Prairie View, on Route No. 22, nine east through Hill Park, then west to Hubbard Park.

F. E. Davenport, of 464 Graham Avenue, Wilmette, is in charge of sales of this company. He has been in the reconstructed last March, having purchased some of the late to meet the demand in order to keep in with the requirements of the units.

Unauthorized Use of "Realtor" Is Branded a Fraud

The real estate profession is protesting to the public that it is not to be designated the self-proclaimed "realtor" but is a member of the National Association of Real Estate Boards, a body of qualified and professional persons making such unauthorised use of the term will be liable to revocation of their real estate license and to a ruling of A. C. McNulty, assistant secretary of state in charge of the administration of the New York real estate license law.

Field court decisions in six states have upheld the exclusive right of the National Association of Real Estate Boards and its member boards in 657 cities to the use of the membership designation "realtor," coined for the association to indicate active members of its constituent boards in good standing.

The state commission administering the New Jersey real estate license law some time ago made a ruling similar to the New York ruling.

Butterfield Rd. Is Made Official State Route

Butterfield road has been officially put on the state aid system as state aid road No. 25, according to Frank C. Wells. This is the route of one of the three "super highways."

The first steel rails rolled in America were rolled at North Chicago, Ill., in 1865.
