## LINK-BELT AUTOMATIC COAL STOKER

Location of New Home

Map, sketched for this news-magazine, shows location of demonstration home at 910 Chippewa lane, Wilmette.

## Local Concern Supplies Wood for New House

Lumber for the new demonstration home at 910 Chippewa lane, Indian Hill Estates West, Wilmette, which is to be thrown open for public inspection beginning this Saturday afternoon, was supplied by Hoffmann Brothers, 1208 Central avenue, Wilmette, who have been in business in the community for more than half a century.

Backed by a franchise from the Weyerhaeuser lumber interests, one of the largest lumber concerns in the world, demonstration house features include four-square certified Douglas fir joists, straight and strong, low-moisture content lumber, free from knots, western red cedar siding and shingles, and western pine trim.

In addition to the exterior material furnished, the Hoffmann firm supplied weatherproof sheathing, insulation, and woodwork, the latter being of Williamsburg type colonial design.

The same local firm announced that, through the Weyerhaeuser company, it was prepared to aid in financing the construction of local residences through FHA loans.

Advantage of having a material firm aid in the home financing was emphasized by the company officials.

## Home Will Be Open Saturday Afternoon

(Continued from page 54)  
every detail and we feel at a price considerably below its actual worth. It has been done with the sole thought in mind of presenting the prospective owner the maximum in value architecturally, from the construction standpoint, from a market standpoint and last but most important, from the location of his prospective home, taking into consideration the adjoining properties, its possible future neighbors, the company back of the property that he purchases, the type of streets within the section, the maintenance and how far it extends, schools available, churches and shopping districts, how the property looks and its utilities perform under adverse weather conditions.

## Automatic Stoker With Anthracite Coal Found Best Method of Heating

Contributed

One of the phenomena of present-day social life is the pronounced trend towards coal as a favored fuel for home heating.

A few years ago four times as many oil burners as automatic coal stokers sold than other types of portion has been rapidly going down, so that now the rate of installation is approaching the point where there will be more automatic stokers sold than other types of automatic burners.

While automatic heat with bituminous coal has been very popular in Chicago and the North Shore suburbs for several years on account of its economy, uniformity and cleanliness, the use of automatic anthracite stokers is a more recent development.

### Fire Never Out

It is almost unbelievable to many that one can enjoy the same automatic heat advantages from anthracite coal as with oil or gas, yet such is actually the case. In fact, automatic anthracite heat has the further advantage of doing away with a decided drawback of other types of heating. With this type of burner the fire is banked between firing periods, not out entirely as with oil or gas burners; consequently the floors do not begin to cool off immediately after the fire has popped off. With a stoker the fire is never entirely out during the heating season.

With new methods of coal preparation now standard equipment at the mines, you can buy either anthracite or bituminous coal that is clean and dustless, and which burns completely without smoke or smudge. In this connection, it is interesting to note that W. C. Huggins, who designed, built, and offered to the public the model home at Indian Hill Estates, has his anthracite bins painted white, so that the cleanliness of this type of fuel is obvious.

The Link-Belt automatic anthracite stoker, which has both automatic feed from the coal bin and anthracite ash removal, was built and installed by one of the world's great engineering organizations - located in Chicago.

## Skokie Valley Company Does Excavation Work

Excavation work for the demonstration home, built by W. C. Huggins and company at 910 Chippewa lane, Indian Hill Estates West, Wilmette, was done by the Skokie Valley Coal and Material company, 2640 Lake avenue, Wilmette. The home is to be open to the public beginning this Saturday afternoon.
