

Equal Rights Amendment Bracelet

The League of Women Voters, along with several other groups, is launching a national Equal Rights Amendment ratification campaign this coming fall. The first part of the campaign, which was announced publicly in late October and is available now, will be the sale of an ERA bracelet.

The purpose of this bracelet is to create a continuing awareness of the issue and the need for the ratification of the Amendment. Proceeds from the sale of the bracelet will go toward getting the Amendment ratified.

The League of Women Voters felt that this was a cause students at A.C.C. would be interested in supporting and would appreciate contribution.

Students can show their support for ratification of the Equal Rights Amendment by wearing the ERA bracelet. The bracelet is made of nickel silver with the letters E.R.A. pierced into it and can be worn by both men and women.

The cost of the bracelet is \$3.00 prepaid, including postage. Students can order from:

Beltsville, Md. 20705

Enrollment Increases

There have been some definite increases in certain academic areas according to the 1971-73 "student regular enrollment on campus" figures.

Areas that reflect this increase the greatest, include the Fisheries Technology Program, the Forestry Technology Program, and the Business Administration Programs. Their student increases have been the following:

	1971 Student Enrollment	1972 Student Enrollment	1973 Student Enrollment
Fisheries Technology	12	21	36
Forestry Technology	37	58	70
Business Administration	95	95	145

Students prove to be developing a trend toward the business and technological areas. When questioned, Mr. Valli revealed that he thought this trend could be a result of the major emphasis we've experienced in nature; natural resources, control of pollutants, and environment. Both Fisheries and Forestry fit into these categories. Students appear more interested in the world around them, and therefore, steer into fields directly related to the environment. Also, according to Mr. Dierking, 80% of the students enrolled in the Forestry Program come from Metropolitan areas. Maybe they just want to get away from it all!

Business, also, is popular at A.C.C., with large numbers of students in all of the various areas. Mr. Valli feels that because of the great demand for experience in the business field, and also due to the great number of special business courses offered, and the present jobs available, students realized this value and are utilizing A.C.C.'s benefits in this respect.

"We are meeting a need by offering these speciality courses in business," concluded Mr. Valli.

Other small increases involved in this academic enrollment have been in the areas of Liberal Arts and Science. These slight increases have been in the fields of Undecided Transfer and Art. The figures appeared as the following:

	1971 Student Enrollment	1972 Student Enrollment	1973 Student Enrollment
Undecided Transfer	231	240	256
Art	5	19	20

In summing up the overall picture of student enrollment, Mr. Valli reasoned that apparently students are shying from the academic areas of teaching and engineering because of the low employment levels, and the fact that less are needed in this field. He also felt that possibly in the future, we may develop a need for qualified persons in these areas because of this present trend.

Where Have All the Cheerleaders Gone?

A question many would ask themselves if they attended the tryouts of the A.C.C. cheerleaders. A question which also might be applied to the lack of spirit at the college basketball games.

Suddenly, with those high school years in the background, fewer girls try out for cheerleaders, fewer people attend games, and also fewer cheer for their team.

If a scale were made up comparing the turn out of students in each event at A.C.C. to that of the years in high school, a considerable decrease would be shown. Instead of twenty to thirty girls trying out for cheerleading, there are only nine this

year (six last year); instead of the bleachers being filled only one or two rows are taken, and instead of the crowd "raising the roof" with their cheers, the gym echos only with silence.

What has happened between that space in time when a student graduates from high school and enters college? Are students "too mature" to cheer now that they are in college or is it that people today are too wrapped up with "larger issues" to remember the joys once shared in those little pleasures of life?

LOST AND FOUND DEPARTMENT ESTABLISHED

If you've ever lost anything at A.C.C. you might have had some trouble locating the Lost and Found Office.

Until this semester, when Dr. Stoutenburg set one up (the exact date is not known), there was no established lost and found department.

In the past lost articles were collected

in the Business Office. Articles from '68 to '71 have still remained unclaimed.

Now if you have lost or found articles you can contact Mr. Allbritten's office.

Some of the lost articles will also be posted in the "Splinter". In claiming an article, one must show some identification of ownership.
