

cialization, steam reformers will be there to feed them.

The product gas from this process will be fed to a boiler to produce steam. The composition of the product gas, which is predominantly hydrogen, will result in a very clean burning flame with very low emissions. One of the benefits of the process is that it will displace about 6 million cubic meters of natural gas now used by the mill to raise steam for its process. This will provide a reduction in greenhouse gas emissions amounting to 11,000 tonnes per year of carbon dioxide."

The Trenton mill provides direct employment to 145 employees and over 500 indirectly and has a financial impact of over 20 million dollars annually to the local economy. Over the past 5 years Norampac Inc Trenton has supported over 50 different charities, community projects with direct contributions of over \$100,000.00.

Norampac is committed to conducting business in a manner that protects the environment, conserves resources, ensures sustainable development and seeks continuous improvement in its environmental performance.
