We are the first here and the first here and the first here and the

As to the question, What influence has the repidity of the scoling process upon the quantity of butter produced? Mr. F. instituted numerous minute and varied experiments at the dairies of Osupgaard and Gjeddesdal, and the results thus obtained show that, whether the vessels are large or small, or placed in still or running water, the quantity of butter obtained is always greatest when the cooling of the milk cocurs the most quickly. It is, therefore, advisable to keep the temperature of the water in which the milk vessels are placed as low as possible, and it is a mistake to attempt to save ice in doing this.

As to the next question: What influence has the size of the milk vessels are placed as low as possible, and it is a mistake to attempt to save ice in doing this.

As to the next question: What influence has the size of the milk vessels are placed as low as possible, and it is a mistake to attempt to save ice in doing this.

As to the next question: What influence has the size of the milk vessels upon the amount of batter obtained? several experiments were made with vessels, 16, inches in height, and containing 100, 50, and 15 pounds of milk respectively, and allowing 8, 10, 22, and 34 hours for the cream to rise. The result was that in each instance the smallest milk vessels gave, in proportion to the milk contained in each, the largest quantity of butter, and this, whether the time allowed for the oream to rise was short or long; but ashes than on clover. Circumstances (JUNS, GUNS.

ter than the same quantity of milk cooled in the round 50 pound vessel. The difference here was evidently not great, but, at all events, the oval vessels are preferrable, as they allow the milk to cool most quickly, which is necessary for the production of the best and greatest amount of butter.

Mr. Fjord has also shown that snow gathered on mild winter days, and compressed and stored away, may be used instead of ice for cooling the water in dairies; and that a great deal of ice is wasted by dairymen in omitting to ever the floors of their ice-houses with shavings, peat or like nonconductive substances, which prevent the analysed heat of the aparts heat of the aparts from ris-

When, after a pause, Sir Penthony

quiet. Lady Stafford is the first to speak.

"I am bitterly disappointed," she says, in a tone of intense disgust. "It is a downright swindle. In spite of a belief that has lasted for years, that nose of his is a failure. I think nothing of it. With all its length and all its sharpness, it never found us out."

"Let us be thankful for that same," returns Molly, uevoutly.

By this time they have reached the outer hall, where the lamps are shining vigorously. They now shine down with unkind brilliancy on Mr. Potts's disfigured countenance. A heavy veil disfigured countenance. A heavy veil of black spreads from his nose to his left ear, rather spoiling the effect of his unique relies.

left ear, rather spoiling the effect of his unique ugliness.

It is impossible to resist: Lady Stafford instantly breaks down, and gives way to the laughter that has been oppressing her for the last half hour, Molly chimes in, and together they laugh with such hearty delight that Mr. Potts burns to know the cause of their mirth that he may join in. of their mirth that he may join in. He grins, however, in sympathy, whilst waiting impatiently an explanation. His utter ignorance of the real eason only enha

pleasantness, and placed it within all. Only 25 cents a bottle.—1025-5 Thomas Belectric Oil! Worth Ten Times Weight in Gold. Do you know anything it! If not, its time you did.

"Not much," replies Cecil, in a whisper; "but; oh! what has happened? Molly, speak."

"I am quite safe," says Molly, "but horribly frightened. Mr. Potts, are you all right!"

"I am." He is ignorant of the fact that one of his cheeks are as black as any nigger's, and that both his hands resemble it. "I really thought it was all up when I heart you scream. It was that wretched powder that got dry at the end."

"Have you both ears, Molly!" asks Cecil, with a laugh; but a sudden commotion in the hall outside, and the rapid advancel of footsteps in their direction, check their merriment.

"I hear Mr. Amherst's voice," says Mr. Potts, tragically. "If he finds us here we are ruined."

"Let us go behind the curtains at the other end of the room," whispers Cecil, hurriedly; "they may not find us there—throw the plate out of the window."

"No sooner said than done: Plantagenet with a quick movement, practice." The healing properties of the Liminary of the least money, as well as the best quality. The healing properties of the Liminary. The healing properties of the Liminary.
