

Fruit culture in this county those not receive that attention which its merits seem to me to demand. There are, it is true, a good many corolards in the country.

The second of the soil is thereby secured.

Water furrows. If the land is not furrows with the plow, for carrying off the soil is thereby secured.

Water furrows. If the land is not well drained, when all else is done well drained, when all else is done well drained, make the necessary in the wheat field, make the necessary additive. London: 1012-1v. nany young orchards in the country. invested than apple trees, and they of them, as far as my obser- may occupy the spaces between the vation goes, are of very small extent, trees in the orchard. The ground fact some of them receive no care at affer they are planted, but are simply seeded down to grass and left to take care of themselves; or what is worse, they are compled year after year by a grain crop. It cannot be expected that fruit trops treated in this manner will over become profit alto. If a young orchard is not taken care of it would have been better not to have planted it, for the land so completed would have given a better not must fit the money invested in the grain of the grain of the same and vealures and the grain of the planted to the same of themselves, they are planted, but are in some other parts of the plant of the possible of the possible of the possible of the grain in the grain of the plant of the plant of the plant of the possible of the grain of the possible of the possible of the possible of the possible of the grain of the possible of the should still be subject, such as Beadle's, Barry's or the best truit Cabbett's, and study it well. collected and planted by me twelve compact with fine tilth of the surface, years ago. I advise the boys to make years ago. I advise the boys to make a note of this and save some apple as seeds to be planted next spring. They should be planted early in the spring in rows about it inches apart and two or three inches apart in the rows, in deep rich soil. After the the seeds come up the ground should be kept well cultivated and free from weeds, but then't he deep close to the young tree, for if this done its roote will be out off, thus depriving it of power to retain nourtehnent from the soil. When the young trees are one
