For, on the corner pressure. A strong tes of oak bark is of the Dakwood and Fonelon road, just often used to wash the galled part. mention the town limits. There is need. Alons mixed with oil used upon harness of in the south riding not only a great is until to knop fate from gnawing it. of large deaths for the purpose of death. ness out of their reach. Plies greatly sands of seres annoy horses, some being very sen We take from an American exchange said that a strong too of hickory leaves, the subjoined general remarks on drain- put on with a spongeand renewed daily,

Nothing is probably better understood sheet will keep them away, and is often among farmers than, as a rule, that wet a great comfort to the horse. Darken soll is a cold soil. If a wet soil is a cold ing the stables during the day time will well, and weld almply because it is wet, it help keep out the flies. The cleaner the is very easy legic to say dry the soil and stables, the less annoyance at the house ntimes and astracts from the it will become warm. This, too, is always from thes. The duty of deciding which of seems strange that so simple a process Among the camentials are pure water, though known and practiced centuries good food for the cows, and clean man age to a very limited retain, is but very | agement of the milk and cream in every escently datming general attention, and process, from the time of drawing th o to, as a means of improving his being reduced to something like a practical from the mider until the butter is

stead and antiquette beats Swamps, indeed, and stagnant pools "Calves should have a run in a go to however, to sensed against and pends of water have, of necessity, phere of grass. The value of a cow debeen carried away through drains, or pends so much on the first year's growth more properly open ditches. But it has that the calf should have the best of been reserved for a comparatively late upod, that the mature animal may be the testings to simest all classes and "Figs that are ready for the early maket will require a generous feeding from

The wet condition of the soil, is how the start. The attention that they reever, only a part of the problem. A wet vetre now will determine very much soll is also a difficult soll to manage on the profits of the placery. A run to secount of the baked condition to which grass, or, better still, clover, will do it is always liable under a hot sun. This them much good, but a good supply of spenders it less friable, requires a vastly bean and most slope must not be for greater expenditure of labor and time gotton. The frame of the animal is after all the labor has been expended,

To day soil by under-drainage is also playment in the vegetable garden, and these difficulties, for a warm, day soil will selfor or never bake, and is more productive than the cold and wet. As this is a question of practical science, let us briefly esemine a few simple laws on which the facts 1 have stated rest and by which the results mentioned are brought about.

First 11 is a well-known fact in Salt boxes are easily made, and
