Fishery Overseer McDermott of Port Perry had several parties up before Police Magistrate O'Leary for infractions of the fishery law. A small fine was imposed in three of the cases. One little fellow was discharged with a few words of warning and advice from his worship and one dismissed without costs. Three more cases will come up Friday next.

Court of Revision.

The court of revision held the adjourned meeting on Wodnesday night. The principal husiness was the consideration of applications looking to reduction of assessment on the hotel-buildings of the town, depreciation of value be-ing claimed under the action of the Scott act. It was decided to make a uniform reduction amounting to about twenty per cent. of former valuation. In all the reduction of assessment will foot up to nearly \$18,000.

Not very long ago a change occurred in the tenantoy of n, hf. 6, con. 10, Mariposa, and the incoming tenant discovered a most ingeniously constructed fire-trap arranged just underneath the roof of the house. An auger hole had been the roof of the house. An auger hole had been bered in the roof; underneath was placed on a shingle supported by a rafter a quantity of hemp saturated with coal oil. In the hemp was placed a bunch of matches, and over the matches exposed to the envi's rays was a piece of glass—which would have the double effect of keeping the fire-trap dry and attracting the rays of the mul. A more cunningly devised plan has seldom been found. Fortunately it did not go off, or there might have been a big blaze.

A great many householders have soft water disterns in the cellars of their houses. It may not be a good practice—from a sanitary point of view. In addressing the board of health Dr. McAlpine urged that the board should give this point careful consideration—in fact should recognize it as objectionable, and so advise the people and insist on the practice being avoided in the future. Unless very well wentlated, Dr. McAlpine said, there was no cellar but what was rendered damp and unhealthy by having a tank of water standing in it, especially during winter.

A BOON

BUTTER AND CHEESE MAKERS.

The statement that the low prices now ruling for Butter are distinctly traceable-in a measure-to bad salting and to poor packing in the past is a statement which is only too true. The old style of salting butter should be abandoned.

Butter well made and salted with fine salt will command the highest prices. We have had butter delivered to us of excellent quality but ruined for table use by a too liberal application of coarse salt.

We have imported and are selling a very superior salt for the use of butter-makers. It is the best salt for the pur-pose in the market. It costs but little more than the coarse salt and enhances the quality and value.

per pound, as compared with the use of any other brand of salt. Six pounds of salt are usually required for the making of one hundred pounds of butter. One sack of Ashton's salt will make thirty-seven hundred pounds of butter; therefore, the use of it will make a sack worth thirty-seven dollars in the same calculated. The use of Ashton's Factory-Filled Salt in butter-making enhances the value of butter from one to five cents refore, the use of it will make a sack worth thirty-seven dollars, in the mere enhancement of value of product over the use of any other brand. It is not safe to take other salt as a gift.

To make cheese, two and one-half pounds of salt are required to make one hundred pounds. The extra cost of Ashton's Factory-Filled Salt above other brands will not exceed, for the manufacture of one hundred pounds of cheese, one cent and a quarter, calling the cost of Ashton's Salt double the price of ordinary brands of salt,

The enhanced value of cheese by the use of Ashton's Salt is, in the opinion of experts, one-eight of a cent per pound—equal to twelve and one-half cents per one hundred pounds. It is not safe to try to save a cent and a quarter,

in view of a gain of twelve and a half cents, in the making of one hundred pounds of cheese. Every manufacturer of butter and cheese, competent for his business, knows that a fine-ground salt, and not properly dried, runs out with the milk, leaving no flavoring or curing property behind. Ashton's Salt is effectively soluble; no other, as at present discovered, is effectively soluble. By using fine salt, that runs away, weight of the product
