## The farm.

Barley is the richest grain in mindeveloping frames of growing chicker, fater tissues.

Few farmers will readily believe often been grown, and this is much larger than average yields of pointoes.

does not look as promising as is did a few weeks ago. The appearance of the plant is unfavorable, and the crop is three weeks behind last year.

The section of the same of the champion wether of the same of the champion wether of the same The sugar best root erop abroad The estimated deficiency is 18 to 20 per cent, which accounts for the material rise in the price of sugar all ever the world.

When corn is in checks with straight rows both ways, something is gained by running the cultivator from one corose of the field to the other. The frame must be set narrower than when cultivating the usual way, but the teeth will out closer to the hill and destroy weeds that would not otherwise be reached.

There is more waste in the potato erop than any other, but if the smaller and scabby potatoes are boiled and mixed with meal, for pigs, they will pay nearly or quite as well as the sound potatoes, which have been marketed at low prices the past two cattle, sheep and hoga run to lean years. Other regetables may be and some to fat; and it having been

added to give variety to the diet. For smoothing fields after planting there is no clieap device better than brush harrows, made by placing boughs from the woods laid as flat as possible, with their butt ends pro-jecting through a piece of hard wood scantling, well secured. One strong horse will draw a brush of this kind that will smooth a surface 10 or 12 foot wide.

The advent of the 13 and 17 year In advent of the 13 and 17 year locasts together this season is causing much needless slarm. The name locast is the only frightful thing about the insect. Really it is only a creada, and in its present state of ex-

ner right. It are one or me get or only Cours gottle the but or hegan to come, what Is minutes for you have everything right, and then put for dold water to reduce the temperature, their turn very alowly till the futtor gathers. Then run of the buser-milk and week your butter in the charm. It should not he in a great main, but in granulm, Alle mendard word by small where Prieries After you have their wante of it take it out on a lever hinter WORKER, and well for the cour faute, and put away without further wo k mg in a cool, clean place till you ly without any streaks, and no more. Ay doing this you will be able to command full prices and save yourself lots of grief and mor-

Fat and Lean Beef. It is pretty evident that feeders and breeders are beginning to consider the demands of the consumer, that in first class butchers meat there shall be more lean and least fair, or is other words a maximum of tallow shall give place to a fair proportion of tender and juicy meat. The consumer who now buys a first-rate ripe beef, mutton or pork, pays for three pounds of fat and bone to one of lean, and the fat being good for little clas than soap grease, the portion available for eating containing three prices. It is worth our while, perhaps, to consider the changes perhaps, to consider the changes which have taken place in the char seler of butchers' meat within 50 years of so, and how fat has neurped the place of lean,

Then, if when a steak or joint was bought, the butcher ventured to remove a portion of the fat, the buver protested, being desirons of getting as much for as possible, not only because it was scarce, but more because the fat of those days, when cooked, could be exten with relief. But now the consumer insists that the dealer shall give him as little fat as possible, as he has more of it than he knows what to do with, since when it is cooked it cannot be eaten. The difterence between the fat of 50 years ago and that of the present consists in this, that formerly fat was made up of cell tissue, the result of the then system or manner of feeding a class eral matter and is therefore very of spinule in which the flesh and good for furnishing the material so muchles were developed in a much much needed for bones in the rapidly larger proportion than the far and

Now the eystem of feeding having that a well cared for piece of strand been radically changed on account of such is the fact. Crops of straw changed, too, in its physiological berries of 200 bushels or more have make up, and has become little more than an animated frame on which to hang a maximum of fat, once a minimum of lean. Take the prize fat class, with a blanket of four or five inches of suct over his shoulders, and look at the prize fat pig, smothered ander six or seven inches of lard, and though each may weigh enormously for its age and race, the amount of catable substance in the dressed eareass does not much exceed that obtained from the carcase of an animal, in fairly good condition for slaughter, of half the

That is, the aim seems to have been to produce fat only, with small regard to the increase of lean; and this because it appears to be under stood that if an animal is fed high for a long time the result will be far out of all proportion to lean. But the fact is some races or classes of proved that when corn is abundant and cheap tallow and corresponding weight is put on cheaper than muscle or deals, breeds and races of the latter characteristic having been chosen to multiply from in preference to the former. This the consumer appears to have found out and in future will demand that his proportion of lean and fat, whether steak, chop, joint or roast.

Arbitrators Meeting

here of couling moths bred in years of abundant fruitage quickly destroy the small amount of fruit set the following spring. If the fruit is protected this year by spraying with Paris green water, next season filters will be few or no coding moths, and the large croy will grow free from worm holes.

The dash churn is passing away as a thing of bygone days, its places being supplied by the revolving for the oream in constantly griterion, with the dasher operating inside the churn. The revolving churns have no inside contrivances, the churning being done by the creative of the sides of the churn.
