One of the most prosperous towns in the district is Ontario, and like nearly every other spot between the mountains and the sea in Southern California is largely peopled by Canadians. Many are persons who have removed thither for their health. On the way out we once drew the attention of the handsome porter to the fact that the thermometer registered over 70° and suggested that the fires should be banked. The reply indicated that "Tom" knew his business. "You must remember, Mr. Hughes, that you are healthy and full-blooded, and don't want much heat; while half the people going to California as a rule have only ene lung and are thin blooded. They would want the heat up to 80° and then would not be too hot.'

Single Tax.

DEAR SIR, -Single Tex and R. T. S. T. have each a short amendment to their former communications in reply to my letter on the above subject, and with all due deterrance to their great knowledge I den't think they have strengthened their case a great deal, Single Tax says, "it is estimated that the faims in the United States constitute ten per cent of the total land values of that country. but that the farmers pay 80 per cent of the total texes. There is no ciass to whom the single tex will prove a greater boon than to them" (the farmers I suppose ) Now in the first place, I would like to know who made so an abourd an estimate? The writer could not have written so short a sentence and shown how utterly ignorant he is on the subject of texation, in any other way. If the farmers pay 80 per cent of all taxes now, what would their condition be if all taxes were levied on and and all other sources of taxation exempt These men must be under the impression that all vacant and unimproved lands now are exempt from taxation, while in reality they are taxed in most cases higher in pro portion to their value than improved and occupied lands.
