It would be a very good thins for the tyrse number of drify farmers who had themselves at the out of the year with small profits, if they would averhand their ways of thiry business more than they doc that is absorbing the fossiles of their foil and later. It is the small look that sinks he ship, and invariably those looks are the strip, and invariately these teams are ababiliable to because the farmer exercises a wrong judgment, Rinely ains mentally in a hundred who keep cows for express drivy this inchange do so in a blind, mechanical way. They never set resectively to work to see it their old methods are the most profitable ones they could not be bereithe hard to get them to face themselves. They dread to take the pondil and so into a close extentation conin the right way or hat; but they must shake off this cowardice and indifference of they will never be any more encounted than they are now. There are four main feasions why most of the dairy farmers make so libbs money from their cowst entated for the business. 2nd, Summer districts making milk when it is the observed and tetting the occur so dry when it is the degreet. Sed, Refusing to to the transfer of the transfer to the transfe ow a year, busides the grain she needs, the thomsing to believe they must food wisely and strongly if they make a cow stell hor back profit. The people have been firing away for years over this ques Hon of poor sows, and they feet as discontented over seeing datrymon soing along contented with such poor datry machines as they would if they saw them mowing grass with a hand stekler. There is but one food out of that difficulty and

can get it, who would an soon think of starting a now as his own mind. To farming will pay a good profit. PARMER.
