

A NIGHT OF WONDER

Furnished to Hundreds of People—Some of the Astonishing Atoms of Nature Explained.

The Cleveland Microscopical Society recently held their first annual reception at the assembly room of the Board of Education. It was a most interesting affair, and while the main theme was the microscope, and while the main theme was the microscope, and while the main theme was the microscope...

A very highly magnifying power could not be shown, owing to the constant tremor of the tables and the insufficiency of illumination. Dr. C. B. Parker, however, in one of the microscopes on the table, magnified an object about 3,000 diameters, but not with perfect satisfaction.

It is probable that not more than 100 instruments attempted more than 500 diameters. Sixty-four microscopes of all sorts and sizes were there, ranging from the "Jumbo" of Dr. Layton, two inches and a half in height, to the magnificent instrument shown by Dr. Y. Moore, which was also a microscope of the last century exhibited. The list of subjects is a long one, and it is especially hard to select any to describe, as they are all so interesting.

The first one worthy of mention was shown by Dr. V. B. Renzer. It is the circulation of the blood in the web of a frog's foot. The unfortunate batrachian was caught last October, and has been imprisoned ever since, being fed every two weeks on a piece of beefsteak.

ABOUT AS BIG AS A PEA. The usual method of keeping them still while being examined is to chloroform them or inject carbon hypodermically, a South American poison, but the use of this under the influence of morphine very successfully.

Professor John Bolton showed some very beautiful feather crystals of gold and a tongue of a whalek by polarized light that would well bear the name of "rainbow." Dr. George C. Russell showed how the trichina curled up in the muscle of man. Dr. Nodine had a large number of sections of the human eye that were exceedingly interesting.

Mr. H. C. Gaylord dealt a severe blow to the cause of temperance by the subject of his microscope, which was the organisms filtered from the water supply. There was a confused mass of all sorts of wiggly tails and "whirlwinds," which were unappreciating enough to have sprung up anew when it was known that they are unable to live when the water has infused in it a little alcohol, or, in vulgar parlance, "has a fly in it."

Mr. M. Rogers, who had the next table, confirmed his statement by showing the terrible Cyclops Quadracornis infesting Lake Erie, which dies happy when it is caught in the water supply.

Too Nice for Real Work.

The Philadelphia Times lately had the following sensible, though not very new remarks: "The boys now growing up seem to be too nice for real work, and they seek positions as clerks and book-keepers, and such light places, where they seem to care little for the pay so long as the work does not muddle their hair and soil their clothes."

That's so, and as true of Canada as of the States, but then, are the young fellows expected to blame for the want of things? Not by a long way. On the contrary, they are often victims to be pitied quite as much as fools to be condemned. In the first place, the education they are getting imposes them for dirty, laborious toil. It leads them to a life of idleness, and when they are often victims to be pitied quite as much as fools to be condemned.

The Importance of England of her American Colonies.

By the middle of the eighteenth century the colonies had indeed come to be a factor of importance in the affairs of the world. It is a fact that is often forgotten, but it is a fact that is often forgotten, but it is a fact that is often forgotten...

That's so, and as true of Canada as of the States, but then, are the young fellows expected to blame for the want of things? Not by a long way. On the contrary, they are often victims to be pitied quite as much as fools to be condemned.

Intellectual Precocity.

One characteristic of the ordinary boy is his want of what is called moral thoughtfulness. He lives in simple obedience to school traditions. These may compel him, at one school, to wear a cap, and at another, to wear a coat and hat and boys who are slow at learning still manage to get on.

That's so, and as true of Canada as of the States, but then, are the young fellows expected to blame for the want of things? Not by a long way. On the contrary, they are often victims to be pitied quite as much as fools to be condemned.

REVEREND WILLIAM STOUT.

A sufferer for 23 years—An Interesting History of His Case. In the autumn of 1859 an indolent, painless swelling was observed by my friends to be rapidly growing on the left side of my neck. I was freely applied during the following winter, but swelling continued to increase, until it reached the size of a large apple.

That's so, and as true of Canada as of the States, but then, are the young fellows expected to blame for the want of things? Not by a long way. On the contrary, they are often victims to be pitied quite as much as fools to be condemned.

Snakes and Destroyers.

The loss of life in India due to the ravages of venomous snakes is almost incredible. Yet consumption, which is as wily and fatal as the deadliest Indian reptile, is winding its coils around thousands of people while the victims are unconscious of its presence. Dr. R. V. Pierce's "Golden Medical Discovery" must be used to cleanse the blood of the scrofulous impurities, for tuberculous consumption is a form of scrofulous disease.

That's so, and as true of Canada as of the States, but then, are the young fellows expected to blame for the want of things? Not by a long way. On the contrary, they are often victims to be pitied quite as much as fools to be condemned.

FOR THE KIDNEYS, LIVER AND URINARY ORGANS THE BEST BLOOD PURIFIER. There is no way by which any disease can be cured, and that is by removing the cause—wherever it may be. The great remedy is the only one that can be relied upon to cure nearly every disease caused by deranged kidneys or liver.

AMANDA K. ENNIS, Fulton, Mich. That silence is one of the arts of conversation is allowed by Cicero, and he says "There is not only an art, but even an eloquence in it."

When you visit or leave New York City, save Baggage Express and Carry Home, and stop at Grand Union Hotel, opposite Grand Central Station. The hotel is situated at a cost of one million dollars, reduced to \$1 and upwards per day. European plan. Elevator. Restaurant supplied with the best. Horse cars, stages and elevated railroads to all departments. The hotel is situated at a cost of one million dollars, reduced to \$1 and upwards per day.

Vegetine. I am now using it freely in my practice. It is a goodly remedy for the heart. The value of the matter in controversy does not exceed \$1,000. This is another surprise perpetrated by the late Legislature.

There are 40,000 women in New York City who support themselves. THE CANCER MEDICINE. Mr. H. R. Stevens—Dear Sir: This is to certify that I have used your Vegetine for Cancer, and that it has done me more good than any other medicine I have ever used.

SPRING MEDICINE. Vegetine is Sold by All Druggists. WHITE LIGHORN EGGS FOR HATCHING—Gain and Purity guaranteed. \$3.00 per 12; far less guaranteed. L. GREENWOOD, Norway, N.O.

AMBER SUGAR GANE MACHINERY. New Paragon School Desks. B. BEATTY & SONS, WELLS, ONT. 22 Early Amber Cane Seed imported from the Southern States. Send for Catalogue and Prices.

WATCHMAKERS. Before buying a watch, see the "Whitcomb" made by AMERICAN WATCH TOOL CO., Watlman, Mass.
