

CHURCH SOLEMNITIES.

Not a spotless character: The sun. Homeward the sea-riker preacher rolls his steady way.

Paradoxical as it may seem, gamblers belong to the "better" class of citizens. "Do not throw away the bones of a turkey or chickens," says a receipt book.

Becher announced no change in his faith last week in so far as we have seen. This would indicate that he threatens to become settled in his views.

As the marriage of Adam and Eve was not performed by a clergyman or under any legal forms of ceremonies, it is just possible that some of us ought not to call the kettle black.

Because the trade dollar is again coming into circulation an old sinner says it is rather hard on the poor but pious people who have worked off their surplus stock on the contribution plate.

"Do you believe in spirits?" the young lady asked the old pastor. "No, my daughter," replied the old man, "I believe in spirits, but not in the spirits of heaven. I preached in Wash upon twenty years."

"If this is not the solid truth, floor me with a watermelon, and give the pieces to the Sunday school scholars," is a form of speech which is regarded in Georgia as imparting conclusiveness to an assertion.

Dr. Holmes once said: "Our brains are seventy-year clocks. As they close the case, and give the key into the hand of the resurrection." This may be why a man of 80 is apt to feel a little run down, remarks an octogenarian.

General News

VOL. XI.

FENELON FALLS, ONTARIO, SATURDAY, SEPT. 22, 1883

NO 30.

Home ward. The weary day hath ended, Long ere the stars appear, And now beneath the fading light We are homeward bound at last.

A CURIOUS CASE. After this, I made it a condition of my remaining that no more bouquets were to be brought into the room.

CHAPTER II.—(CONTINUED). After this, I made it a condition of my remaining that no more bouquets were to be brought into the room.

Women's Humor. The servant girl must go with the family on their summer vacation, or she'll make a row.

There are eighty-five thousand words in the English language, and Dr. Mary Walker used every one but three of them in the interior department handed her resignation to her.

"Yes," said the milliner, "the suicide of Mrs. Drestok is a terrible affair. Why she did it is the very day I lent her a new bonnet, and people will think the bonnet had something to do with it, and it will run a me."

"Oh, oh," exclaimed a loosely-girdled girl, the other day, as one of these (a married woman) stepped off the pier into a boat, and began to handle the oars.

ness of nature, each and all compel me to believe in the invariableness of Law. I have never seen gravitation fail under any test; I have never seen chemical affinities refuse to unite under exact conditions; and in my own experience, I have never seen certain remedies refuse to manifest their effect in some degree.

CHAPTER III. "You must think it strange," said my visitor, "that I should wish to reveal to the ears of a person I do not know, what even a bold man would fear to confide to an intimate friend.

"I do not, indeed," I replied. "The man looked at me uneasily, and digested with his umbrella. 'You see,' he continued nervously, 'I am a bit taken in by my own ideas. I have been thinking of you as a man who would not be easily put out.

"I really know nothing about Miss Garston and Mr. Lampport, except as they are mentioned in the papers. I have been thinking of you as a man who would not be easily put out.

"I really know nothing about Miss Garston and Mr. Lampport, except as they are mentioned in the papers. I have been thinking of you as a man who would not be easily put out.

over with me." "I will not go for six days," returned Mr. Garstone, stamping his foot. "You have robbed me again. You are a villain, Lampport!"

"I have robbed you?" returned Mr. Garstone, stamping his foot. "You are a villain, Lampport!"

"I have robbed you?" returned Mr. Garstone, stamping his foot. "You are a villain, Lampport!"

"I have robbed you?" returned Mr. Garstone, stamping his foot. "You are a villain, Lampport!"

"I have robbed you?" returned Mr. Garstone, stamping his foot. "You are a villain, Lampport!"

"I have robbed you?" returned Mr. Garstone, stamping his foot. "You are a villain, Lampport!"

"I have robbed you?" returned Mr. Garstone, stamping his foot. "You are a villain, Lampport!"

THE DEAD SEA CANAL SCHEME. A Stupendous Undertaking. The proposal to make a canal connecting the Mediterranean and Red Sea by means of the River Jordan and the Dead Sea is a very bold one, and should it be carried out will produce some very striking results.

The proposal to make a canal connecting the Mediterranean and Red Sea by means of the River Jordan and the Dead Sea is a very bold one, and should it be carried out will produce some very striking results.

Leadville produces 10,000 tons of ore a week. A correspondent of the British Medical Journal states that he has found the application of a strong solution of chromic acid three or four times, by means of a camel's hair pencil, to be the most efficient and easy method of removing warts.

Investigations by Herr Schelz indicate that poisoning by very small plated appliances is very improbable, even when the plated ware is used for containing acid food. He obtained less than a third of a grain of the nickel from sour milk which had remained in contact with the metal for eight days.

Grindstones are made from the more compact sandstones, varying in texture and compactness according to the work required for almost every purpose. Among these the "Newcastle" stones, from the coal-measures of Northumberland and the adjacent counties, have long been famous for general purposes; others are employed for grinding, while many varieties are used as plane surfaces for whetstones. Other qualities are used for whetstones. A German variety is famous for this purpose.

During a recent lecture in London before an assembly of army officers, inventors of small arms, and other experts, Colonel Fosbery astonished his audience by suddenly drawing from under the table a weapon which he called a "baby electric gun."

It is often observed that bricks imperfectly baked become friable at the surface, and in time are reduced to powder. This phenomenon has been attributed to the action of moisture, alterations of heat and cold, but the source of electric force by M. Parize made it probable that these are merely favor the action of the cause—viz., the development of microscopic organisms.

Having observed some swellings on the plaster coat of a brick furnace, he made one of these, and a very fine red powder came out, resulting from pulverization of the brick. Examined with a magnifying power of about three hundred diameters, this powder showed an immense number of diatoms and other microscopic organisms.

A Louisianaian says: "The time will soon come when, in our damp climate, the floors of all the stores in New Orleans and in other cities in the State will be built of strong water-proof and indestructible paper tiles. The dangerous percentage of disease will be counteracted by paper material of a suitable character. All our city cars will be built of paper. The rails of our street cars and even crossings, so liable to decay, will be replaced by paper material, suitably treated to remedy existing evils.

SCIENCE.

Leadville produces 10,000 tons of ore a week. A correspondent of the British Medical Journal states that he has found the application of a strong solution of chromic acid three or four times, by means of a camel's hair pencil, to be the most efficient and easy method of removing warts.

Investigations by Herr Schelz indicate that poisoning by very small plated appliances is very improbable, even when the plated ware is used for containing acid food. He obtained less than a third of a grain of the nickel from sour milk which had remained in contact with the metal for eight days.

A Louisianaian says: "The time will soon come when, in our damp climate, the floors of all the stores in New Orleans and in other cities in the State will be built of strong water-proof and indestructible paper tiles. The dangerous percentage of disease will be counteracted by paper material of a suitable character.

All our city cars will be built of paper. The rails of our street cars and even crossings, so liable to decay, will be replaced by paper material, suitably treated to remedy existing evils. Nearly all the furniture of our dwellings, so liable to swell or shrink in our damp climate, will be manufactured in an elegant and artistic style by means of paper material, capable of resisting effectually the sudden changes of our temperature."

FACTS AND FIGURES.

Arizona has 60,000,000 acres of grazing land. "Every dove has his cot and every dog his pants."—Exchange. Yes, and every horse has a collar and draws.
