Wax beans make a delicious salad Cheose your beans, remove the strings, twice as much oil as vinegar.

Free and Easy Manners.

When girls assume a swaggering manner upon the street, use coarse expressions, and greet each other with a rough "Hello," they cannot expect much deference from their male friends. A lady's manner always controls that of a gentlemen; and if sh, does not respect herself he will not respect her When boys and girls, young men and maidens, are allowed to fall into the absurdities of low foolish, meaningless talk, it seems to dwarf them intellectually; they can fin nothing of interest or importance to say and therefore make up for sense by filling every sentence with needless exclamations, exaggerations, or misused adjectives. It requires much patience to be compelled to listen to half-a dozen folks and hear the strange inappropriate use of language. They will assure each other that it is "awful" warm, or the concert "awful nice; the ser man "horrid" dull ; a young lady is "awful pretty," but her dress "horrid ugly ;" the teacher "horrid strict;" such a young gen tleman who called had an "awful awell" team of fast horses. If young people coul hear themselves as others hear them, might result in their reformation.

much broader field in which to manifest it self in the narrow circles of home than their relations, insists upon the former.

Distnctination to Marry. "It is true," said a young lady, "I scarce.

ly know a girl who wants to marry. They are learning something that will interest them as well as support them, two roles in which husbands just now fail. The truth is we are all scared away from any desire to

acquaintances or beaux; who could sontemplate them as husbands? I have always thought that if I could find a young man at all like my father I could love him and marry him, but that school of men has vanished from the younger ranks.

Women of the Future. The young men of the future have got to look sharp. In the seminaries and college whose doors have been opened to girls it is notable fact that the girls this year have got away with the honors, by a large ma-Hot wood ashes applied to a stove when jority. As there is no institution thus open ed which will close its doors against the girls, young men would do well to take their lesson in time. The girls have knock ed the doors open to stay, and, what more, they are there to make good use their opportunities.

GIRL'S WONDERFUL ENDURANCE

Living For Three Weeks Without Food.

A remarkable instance of endurance and of the possibitity of living without food for three weeks has, the Melbourne (Australia Argus says, recently come to light. On the 12th of May a girl named Clara Crosby twelve years old, was lost in the bush in the Lilydale district, about twenty-five miles from Melbourne. The locality in which she disappeared was wild and mountainous, and after several search parties had unsuccessfully scoured it, it was concluded that she had perished in some inacessible spot It is probable, however, that she would have been found promptly had not erroneous information been given to the search parties that she had been seen proceeding in a certain direction. On the and the near presence of rubber in any lost, two men, who were looking for a strayheard a faint "Coo-ee." The men searched. and soon saw the little girl tottering towards them in an ulster, without shoes or stockings on, and in an emaciated condition. She was, however, strange to say, quite sensible. When she lost herself she was proceeding from a house where she had Better than an iron spoon for mixing been staying to her mother's, in the neighsponge for bread, and for similar uses is a borhood, and she subsequently gave the fol-

"I got out of the paddocks on to the road other end flattened like a thick knife blade, all right, and went on a long way; but I did not see mother's house. I followed In a damp closet or cupboard, which is some sheep, and they ran away from me. liable to cause mildew, place a saucer full I lay down and had a little sleep by a path of quick lime, and it will not only absorb in some long grass, and then I went on all dampness, but sweeten and disinfect the again. I got to a house where there was place. Renew the lime once a fortnight, or cart in a shed; but there was nobody at home. I didn't stop till I got into some rushes, which cut my legs, and came to a creek with a tree across it. I lay down in the rushes for the night, and in the morning I crossed the creek on the log. Near the other side a branch broke, and I fell in put the knob in, and let it cool. It will be to the water, but managed to cling to the bank. Close by I saw a hollow tree, and The Scientific American states that plush | was tired and wanted to sloep, so I went in goods and all articles dyed with aniline col- there. When I woke up I could not look ors, faded from exposure to light, will look for my way. I went down to the creek five bright as ever after being sponged with times for water at first. I used to sleep a chloroform. The commercial chloreform lot, and as soon as it was night it was day, will answer the purpose very well, and is and when it was day it was night quick again. On moonlight nights I heard people If children are hungry between meals firing guns, and I heard them knocking "stay the stomach" and not interfere with did not hear me. I used to sing Salvation one would come for me. The cows used to come and look at me, but I could not get jam or preserve, and they are as healthy any milk. I tried to chew a bit of bark but spat it out, as I thought it would pols-

on me, and I got weaker every day." Australians are familiar with the agoniz break in inch long pieces and cook in salt ing experience undergone by people lost in and water. While still warm cover them the bush, and know that in such cases with a dressing of oil, vinegar, salt and adults, as a rule, do not maintain their menpepper. Be sure and remember in mixing tal balance, and that the difficulties of their salads the old saying. "A spendthift for position are consequently greatly enchanced, oil, a miser for vinegar, a wise man for salt | This little girl, however-who, by the by, and a mad man for mixing." Use at least | was not accustomed to country life-was actually able to preserve a mental record of the exact number of days during which she was "out of humanity's reach."

The Dead Sea.

The Dead See is an old and decrepit salt lake in a very advanced stage of evaporation. It lies several hundred feet below the level of the Mediterranean, just as the Caspian had not passed through any stage of decomlies several feet below the level of the Black Sea : and as in both cases the surface must once have been continuous, it is clear that the water of either sheet must have dried up to a very considerable extent. But while the Caspian has shrunk only to 85 feet below the Black Sea the Dead Sea has shrunk to the enormous depth of 1,292 feet below the Mediterranean. Every now and then some enterprising De Lesseps or other proposes to build a canal from the Mediteranean to the Dead Sea, and so re-establish the old high level. The effect of this very revolutionary proceeding would be to flood the entire Jordan Valley, connect the Sea of Galilee with the Dead Sea, and play the dickens generally with Scripture geography, to the infinite delight of Sunday school classes, Now, when the Dead Sea first began its in dependent career as a separate sheet of water on its own account it no doubt occupied the Refinement of feeling and perception has a | whole bed of this imaginary engineer's lake -spreading, if not from Dan to Beershebs, in any rate from Dan to Edom, or, in other the wider sphere of society, where there is words, along the whole Jordan Valley, from so comparatively little to cause friction. the Sea of Galilee and even the Waters of And she who is not a lady in her deport- Merom to the southern desert. Sydney or Melbourne.

THE FARM.

Milk ! Milk ! Milk !

The question with most farmers in a ciilized community is, not how much milk can a cow be made to give, but how much will she give on ordinary feed. This surprisingly few farmers know much about. They think, perhaps, that they know, but their knowledge is based upon a slender line of facts. A cow has a big, fleshy, showy udder, and milks fairly. She is set down as a big milker and as a profitable cow perhaps, reckons d as the most profitable cow in the herd. Near her stands a little cow with a moderately sized udder, and giving a fair mess of milk, which she keeps up in quantity all through the season, and which in quality and real value makes her yield fully equal to the larger product of the big showy cow. The farmer does not know this fact, and may never find it out, unless he takes pains to learn it by a system o weighing, and testing the milk of different cows. We have never known a herd to be carefully tested in this way, when the esti mates of the proprietor and his men, who do the milking and handling of the cows, have not been proved to be incorrect-often greatly to their surprise.

The system to be followed in testing is about as follows: The milk of each cow drawn separately, and as soon as drawn, the milker takes his pail (which should be of tin), to a good scale, and weighs it, putting down both the gross weight and the net weight, after deducting the weight of the pail. The pail should, by the way, be weighed twice a week, for variations constantly occur. Pails are washed and frequently scoured, so after a few days a slight reduction in weight will be almost always noticed. name written plainly, and scratched in or obtained will be invaluable; but this is not to come toward him. The boy fired

to allow liberated gases to escape, as is usual

The amount of sawdust made by portable steam sawmills that have been travelling mendation. through the timber sections of our country has encouraged farmers to utilize it for farm purposes, but the opinions of its value are not agreed. It has been asserted some that its absorptive powers were excel lent, and that for bedding purposes it served an excellent purpose, and it has been largely used in that manner. But by some it is claimed that ordinary damp sawdust is able to set him above the want of hourly Street, Buffalo, N. Y. will absorb but little. One who had tried assistance. the experiment claimed that sawdust that position, when spread upon mowing land, had killed the grass, although saturated with urine and juices of the manure. If this

is so it is a matter of interest. We had always supposed that if sawdust was used as an absorbent and was well mix ed with manure it would become charged with the chemical change of the manure in its decomposition, and so become available with the manure. It is a singular fact that sawduat is very slow of decomposition when left to itself, and this has been verified by one who placed a large quantity in his barn yard in the supposition that it would come out in a little time [suitable for manurial they attack, but the phantom of their own purposes, but which, much to his surprise, after remaining there about one year, was placed there, and of no possible use as a and talents cannot prevent the discovery of fertilizer. QUEER WEDDINGS.

"Thought He'd Just Fetch Her Up to the

A popular preacher was "taking tu ns" with the hired man in running a lawn-mower over his front lawn. He had paused to catch with a handkerchief a salty pearl of perspiration that threatened to drop from his nasal tip to the cavity beneath, and to remark about "all flesh being grass," when slouchy-looking man stopped at the gate and asked if the preacher lived there.

"I want to be married," he explained "and right away, too." The preacher promised to get ready at once, and go to meet the bride with the groom.

"You needn't mind puttin' on nothin' or goin' nowhere.' said the man "But where's the bride!"

"She's right here. I left her in the allon Heagland, about two miles from the ley till I could find you. She's a backward village of Rockaway. He is very excitable sort of gal, and there's no use trying to get and hot tempered, although not addicted to her to no church or into no parlor. But the liquor drinking.
