Lord Wolseley on the Invasion of England.

Lord Wolseley presided on Wednesday night at a meeting of the Trinity College (Dublin) Historical Society, at w ic the subject of debate was "Compu sory Military Service." In reply to a vote of thanks, Lord Wolseley said he thought an invasion of England an impossible operation, If such a thing should ever take place, he believed it would be attempted by a comparatively. small army, for a great army could never be conveyed across the channel. He estimated the greatest force that could attempt to invade England at fre m .. 150 000 to 20,000 men, and even they could not all come together. The priucipal concern of Englishmen was to render their country proof against invasion. For that purpose he believed they only required a small army, and if he were asked to estimate what that army should be, remembering that they had a large : force of militia, volunteers and yeomanry, he would say it should consist in round numbers of 120,000 men, with a first class army reserve of 80,000 to 90-000 men. It was only by means of the short service system that they were able to secure an army reserve. It numbered at present nearly 70,000 men, and by the end of this year it would consist of about 80.000 men. He has no hesitation in saying that these men would bear comparison with the soldiers of any other nation in the world. If they introduced compulsory service and required the same proportion of men, relative to the population, as they did in France and Germany, they would get from the population of London and its suburbs alone the whole army necessary for defensive purposes.

A Climatic Survey.

The announcement that the Minister

of Marine is to have a climatic survey in detail made of the Dominion will be greeted with approval by the general public, and especially by fruit growers. The character of the survey, which was indicated by Mr. Gordon Mowat in evidence given before a committee of the House of Commons last year, warrants the belief that the work will be one of very great utility. The survey is to take account of the average heat of the growing season, the length of frostless period, the rainfall, the average and exceptional cold of winter, and in fact everything else in the way of climate that has a bearing on the capacity for agriculture and the growing of every possible locality from the Atlantic to the Pacific. Parts of Europe and Asia which afford substantial correspondence in climate to portions of Canada are also to be studied as minutely as possible for purposes of comparison. It will thus be possible to indicate at once the probability of success that will attended attempts to cultivate in any particularlocality any variety of fruit, grain or vegetable that has been grown anywhere else. This means of anticipating the often slow results of actual testing cau be put to immense service by the experimenter and fruit grower, and no doubt be the means of preventing much of the waste of money and effort hitherto encountered, not only in our newer districts, but even in the long settled districts of Ontario, where local differences of climate, such as the difference of a few degrees of average heat or cold, orfive or ten days in the length of the frostless sea-on, determine whether or not the very many varieties of fruit and vegetables succeed or tail. If in any part of Eastern Canada or the Northern States, or in any given locality in Europe, any desirable variety flourishes, or any advance through planting seedlings has been attained in encroaching on the cold of the north, it will be possible for one to place his finger on every locality in the Dominion where, so far as climate is concerned, equal success may be hoped for. In the interest of settlement and greater development of resources often scare ly suspected of many districts in the Dominion, the work promises to be second to none of a strictly scientific character yet undertaken. It will do much to increase the reputation of the Estimates promptly given on all kinds of meteorological service which furnishes the climatic material to be utilized in this survey, and, besides, as a new departure in which Canada will lead, it will reflect credit on the Dominion .--
