Two Horrible Accidents.

A PASSENGER TRAIN CRASHES INTO AN OIL TRAIN—TANKS SPLIT OPEN AND TAKE FIRE.

ALTON, Ill., Jan. 23.—One of the most frightful accidents that ever occurred in or near this city happened at 9 o'clock on Saturday morning at Alton Junction, four miles from here, on the Cleveland, Cincinnati, Columbus & St. Louis railway. The southwestern limited train from St. Louis was 12 minutes late, and came into Wann street station at the Junction at the rate of forty miles an hour and ran into an open switch, crashing into a train of freight cars containing a number of oil tanks. Two of the oil tanks were split open and the oil caught fire, spreading to the other tank, box and flat cars, and the entire train was burned up. The passenger engineer, W. B. Ross, of Mattoon, Ill., remained on his engine to put on air brakes and was killed. Fireman Whitman escaped by jumping. The engine and the combination baggage car and smoker were damaged, and eight oil tanks, eight box cars and six flats were rapidly destroyed by the fire. The loss will probably reach \$100,000. The passengers were greatly shaken up, but none of them were seriously injured.

At noon to-day, while a large gang of workmen were clearing away the wreck, the flames reached a gasoline tank, which exploded, scattering the burning oil in all directions. The vicinity of the wreck was crowded with spectators watching the workmen, and they were drenched with oil. It is reported that nearly 50 spectators were more or less injured by the burning oil. The dead number nine, nineteen were fatally burned, and of the fifty turned and injured are Louis Deneve, Montreal; Frank Bartlett, Brantford, and Frank Barton, Sanford, Ont.

Aluminum Will be Very Cheap.

A writer in the London journal Engineering says:—

"The metal aluminum, of which the general public sees so little, is nevertheless the most abundant of all metals. Not a hill nor valley exists in the universe which does not contain it.

Those who have not made minerals and metals a special study will be startled when told that there is ten times more of this metal in the world than there is of iron, lead, copper, zinc, nickel, gold and silver combined. Besides being abundant, aluminum possesses in itself qualities peculiar to no other individual metal. It is stronger than iron, while it is malleable as copper; it is as hard as silver, while it is only one-fourth the weight of that metal; it is as white as polished steel, while, unlike that metal, it is unaffected by the atmosphere—that is, does not corrode or rust. It may well be asked, if aluminum is so plentiful, and if it possesses so many excellent qualities, why is it not more extensively used? The answer is, it is too dear. Its high price has arisen from the difficulty which hitherto has existed in separating the metal from its combinations as formed in nature. The ore of iron has only to be thrown into a blast furnace, along with a flux, and the metal flows; but it is otherwise with the ore of aluminum; it has hitherto declined to be treated so expeditiously. A cheap method of attaining the end in view has been the quest of chemists and metallurgists for years. This long-sought for process has been at last discovered by a Dr. Meyer of Berlin, by which the metal can be produced at about twopence per pound (in 1828 the price was £1,000 per pound); the price to-day is about 4s per pound.

"The time, therefore, seems not to be far distant when aluminum will take the place of iron, copper and brass in constructions where strength, lightness and durability are essentials, and it would be hard to mention any engineering construction intended for use on land or water, and it might be added in air, where these three qualities are not a necessity."

A by-law was submitted to the rate-payers of Bowmanville on January 13th to increase shop licenses from \$200 to \$1,000, with the object of making the license fee prohibitory. When the by-law was first published there were two liquor stores here, but Tufts' has been burned since. The by-law was carried by 217 majority, the total vote being 350 for and 135 against the by-law.
