

About Preserving Eggs.

Preserving eggs so as to have them fresh and in good condition for several months is a difficult matter. Eggs can be preserved, but when they reach the market they cannot compete with those that are newly laid. There is a freshness in the appearance of the newly laid egg that cannot be counterfeited, and though eggs may be preserved (prevented from decaying), they will not be what is termed fresh.

It is not so much a matter of process as in the kind of eggs. Eggs from hens not with males will keep three times as long as those that contain the germs of chicks. In the incubators eggs that contained no chicks have remained for three weeks at a temperature of 103 degrees, coming out in a condition not unfit for use in custards or cakes, and having no odor, while fertile eggs would become rotten as soon as the germ was dead. The main point, therefore, is to take the males out of the yards, as the hens will lay as many eggs without their presence as with them, while the keeping qualities of the eggs will be extended to a much longer period.

The next point is to keep the eggs in a cool place, such as a cellar. If they can be kept at 50 degrees above zero, so much the better, but 60 degrees or even 70 degrees will answer, though the cooler they are kept the longer they will remain fresh. Place the eggs on racks or trays, or in any position which will permit of turning a large number at once. Turn them half over twice a week. There are just the three points to remember, and they are: First, keep the eggs cool; second, turn them twice a week; third, use only eggs from hens not with males.

We are aware that there are many other methods, such as storing eggs in lime and salt, placing them in solutions, greasing them, etc., but the above is the best method known, and the eggs are not stained or changed in appearance. No method will answer if fertile eggs are used. To be successful one should not buy eggs, as a decomposing egg among a lot will affect the whole, and stale eggs will find their way into the basket despite all precautions when eggs are collected from neighbors.

Poultry Raising Mortgages.

A Maine woman tells, in *Farm and Home*, how she lifted a \$500 mortgage from her home by gardening and poultry raising. She had common chickens, and sold eggs and market poultry. She had five \$100 notes to meet, paying off one note each year with interest. At the end of five years she had her home cleared and money in the bank. Besides, she had made various improvements during this time, schooled and clothed her children, paid taxes and insurance, etc. She said she made up her mind to succeed, and she did, although her friends advised her at the start to "let her home go for what she could get for it," as she would never be able to pay off "that big mortgage." This is but one of many instances where fowls have proved themselves mortgage lifters. Of course this woman had the advantage of a garden; besides she did sewing and other work. But it goes to show that poultry culture, rightly understood and followed, is a great help in replenishing one's purse in time of need. What this brave woman did can be done by anybody who has the will.

The First Year.

The editor of this department conducted a series of experiments some ten years ago with pullets of different breeds. One thing he remembers very distinctly, and that is the product of these pullets by the time they were one year old. The pullets were all hatched between the 8th and 15th of April. So soon as they showed signs of getting ready to lay they were put in pens, each pen with a small house, and they never left these quarters for more than a year. The pullets were of three varieties, Single Comb Brown Leghorns, Silver Wyandottes and Barred Plymouth Rocks. They were kept close together and fed and cared for alike. The Leghorns began to lay in September, and by the time they were one year old had produced an average of eighty-four eggs each. The Wyandottes began to lay when seven months old, and at one year old had averaged seventy-two eggs each. The Plymouth Rocks began to lay when eight months old and when one year old had averaged sixty eggs each.—*Stockman and Farmer.*

No Best Breed.

There is no best breed, but there is a best breed for certain purposes. The attempts to produce an "all-purpose" breed of any kind has never succeeded, as the building up of such a breed is the tearing down of another. What is gained in one respect is lost in some other direction. Each breed has been bred for some particular purpose, and if it fulfills expectations in that respect it is sufficient.

MRS. HEELEY.

MONEY TO LOAN.

I have recently had a considerable, though limited, sum of money placed with me for loaning on farms at

Five and a-half per cent.

Parties wishing to borrow on these terms should not delay to make application. Large amounts of funds, at slightly higher rates, according to security. In most cases solicitor work is done at my office, insuring speed and moderate expenses.

Allan S. Macdonell,
Barrister &c., Lindsay.

**LINDSAY
Marble Works.**

R. CHAMBERS

is prepared to furnish the people of Lindsay and surrounding country with
MONUMENTS AND HEADSTONES,
both Marble and Granite.

Estimates promptly given on all kinds of cemetery work.

Marble Table Tops, Wash Tops, Mantel Pieces, etc., a speciality.

WORKS—In rear of the market on Cambridge street, opposite Matthews' packing house.

Being a practical workman all should see his designs and compare prices before purchasing elsewhere.

ROBT. CHAMBERS.

North of the Town Hall.

CAN I OBTAIN A PATENT? For a prompt answer and an honest opinion, write to **MUNN & CO.**, who have had nearly fifty years' experience in the patent business. Communications strictly confidential. A Handbook of information concerning Patents and how to obtain them sent free. Also a catalogue of mechanical and scientific books sent free.

Patents taken through Munn & Co. receive special notice in the *Scientific American*, and thus are brought widely before the public without cost to the inventor. This splendid paper, issued weekly, elegantly illustrated, has by far the largest circulation of any scientific work in the world. \$3 a year. Sample copies sent free. Building Edition, monthly, \$2.50 a year. Single copies, 25 cents. Every number contains beautiful plates, in colors, and photographs of new houses, with plans, enabling builders to show the latest designs and secure contracts. Address **MUNN & CO., NEW YORK, 361 BROADWAY.**

David Chambers,
General Blacksmith,
Francis-st., Fenelon Falls

Blacksmithing in all its different branches done on short notice and at the lowest living prices. Particular attention paid to horse-shoeing. Give me a call and I will guarantee satisfaction. 45-ly.

Proprietor.

Go Try It Yourself.

ONE MAN WHO DISCOVERED THAT QUEER THINGS WE ARE.

Two men were riding down town one morning recently in an elevated train. The man with the silk hat made a discovery, and he questioned his friend thus:

"Are you right-handed?"
"Yes," said the man in the top-coat.
"Right-legged, also?"
"Right-legged, no."
"Sure?"
"Why, of course I'm sure. I have more power and accuracy and dexterity in my right arm and hand than in my left arm and hand. But as for my legs, I can and do use one the same as the other."

"How about your ears?"
"Same as legs."
"Eyes?"
"Each equal to the other in all respects."

"Sides to your jaws?"
"Why are you asking me such questions? If there's a joke in prospect, let's have the laugh now."
"No joke. All sincerity. Wanted to know how well you knew yourself. See you're very slightly acquainted. Just watch yourself for a few days. The proper study of mankind is—good bye, here's my station. You'll be the most surprised man—" "Step lively, please," called the guard—"in the world." And the inquisitor just managed to get out upon the station platform as the iron gates banged behind him.

"You're right," said the man with the top coat, a couple of mornings later. "Told you—"

"Dead right. I've kept tab on myself. Noticed when I used the telephone I always put the receiver to my right ear. Tried my left ear and got all mixed up. Found I always put my left foot first into an elevator, and always took the first step with it when I went up or down stairs. Started to go down some steps with my right foot leading and nearly had a tumble. Then I'm right-jawed. I always chew my food on the right side of my mouth. Never thought of it before, but things do not taste as good on the left side. They do not taste as much, either. Queer, isn't it, how the sense of taste will become more highly developed in one part of the mouth than another by use and force of habit? I'm left-eyed. You know, I'm interested in botany and use a microscope a great deal. Well, I invariably look through the instrument with my left eye. For ordinary purposes, my right eye seems to be as keen as the left one, but I found that it was not at all satisfactory when I applied it to the microscope. I'm right-handed, left-eyed, right-jawed, left-legged and right eared. I suppose I'm right or left in a good many more things, but I haven't had time to discover them yet."
"What queer things we are!" said the man with the silk hat.—*New York Tribune.*

Fried the Water-melon.

I called on a young married couple recently whom I esteem and who furnish me with a good deal of marketable material, too.

The wife is a hysterical kind of a little body with a razor-edged sense of the ludicrous, and I soon saw that there was an item looming up on the weather bow.

So, after I had seated myself, I said:

"Well, out with it."
"Charley, you tell her."
"No, no, I can't. You can do it justice."
"Not as you can. Do please, tell her."

"Well, Polly," said the husband,

"we've got a new servant. She's a German this time."
"And what has she done?"
"She started to boil the eggplant, but that's nothing. Ida showed her how to cook that. She'd never seen one."

"Last night while I was dressing I heard a wild yell of laughter and I knew that something had started Ida off."

"I rushed out into the dining-room and she was prostrate on the sofa, one mass of screams and giggles."

"She sprang up and seized my hand. 'Charley,' she said, looking me wildly in the eye, 'I've never told you a lie, have I?'"

"Never, I am sure," was my earnest reply.

"And you believe me always, don't you?"

"Always," said I soothingly.

"And you won't think I'm telling you a lie now, will you?"

"Certainly not."
"Well, dear," she exclaimed with an effort, and almost turning purple in the face, "s-h-e's f-r-i-e-d t-h-e w-a-t-e-r-m-e-l-o-n!"

"And so she had."

This is a true story.—*New York Recorder.*

It would be an undignified waste of words to criticise the Chicago poet who hypes "warble" with "door bell."
