DO YOU WANT

to invest a small amount each month where it will be safe and yield you good returns in 7 1/2 years?

CAN YOU AFFORD TO SAVE

2c. a day for 7 1/2 years and get \$100
1c. a day for 7 1/2 years and get \$500
20c. a day for 7 1/2 years and get \$1,000

LITTLE AND OFTEN FILLS THE PURSE.

Do you want to buy a home with the money you now pay for rent? So long as the masses of the people do not save anything out of their earnings, just so long will their spendings go into the hands of those who do save, and they are the capitalists. This is why the few own the houses and the many pay the rent.

FOR FULL PARTICULARS call on or address any of the above named officials, at Fenelon Falls. —39-lyr.

The "Fenelon Falls Gazette"

What Shall Our Young Men Do.

One of the puzzling problems of the day is how our young men are going to make a living. What employment is there for them? Once a good education would procure its possessor a fairly remunerative employment, and the possessor of a degree from a university would command a position that lifted him up high in the social scale, and put him into a desirable pecuniary position. This is all changed now, a university honor man is often glad to take a beggarly sum for his services, that in other days would hardly be accepted by an ordinary mechanic. Any clerkship or school offering three or four hundred dollars a year is eagerly sought by 80 or 100 applicants the moment it is known to be vacant, and hundreds of men in the ranks of the various professions can barely make both ends meet by their professional earnings. Speaking on this subject the Canadian Electrical News for March says:—

Every department appears to be overcrowded, and the problem of a choice of a career is becoming more and more difficult of solution. The rapid development of the past few years in the application of electricity has turned the attention of parents and young men in this direction, and there appears to be a widespread belief that this is the most promising field for the future. Mr. Henry Floy, in the Engineering Magazine for January, in an article entitled "Are we Educating too many Electricians?" gives the result of an extended inquiry among graduates of engineering schools as to the extent to which students of electricity graduating from these schools have been successful in obtaining employment at remunerative salaries. Referring to these enquiries, Mr. Floy sums up the matter thus:— Considering the table of total results, which may be taken as a fair indication of the recent graduates in electrical engineering, it will be found that while a greater per cent. of the graduates in electrical engineering secure employment, as compared with other graduates, yet the fewest, relatively, secure employment in the line of work for which they had studied, that is, in order to get employment they had to take positions in which their electrical knowledge did not count." Many get employment in electrical and civil engineering through the influence of friends. Everything is over done. The last batch who passed the civil service examinations must, in the course of things, wait till the last decade in the 20th century before their turn comes. There are thousands of teachers who will never get schools. All the professions are overflowing. The drug shop used to be regarded as a fat thing, but that also is overdone. For every vacant clerkship there are at least three hundred ready to gobble it. There is a long list of certificated inspectors of schools anxiously waiting, like Wilkins Micawber, for someone to drop out or for something to turn up. It has been customary when everything else failed, or when the person failed in everything else, to go into life or fire insurance, but this field no longer furnishes standing room, except to stand and starve. Judging from the numerous quack medicines in the way of specifics for heart failure, catarrh, kidney troubles and all other ailments which affect humanity, one would judge that a whole army of discoverers had invaded this interesting field.

The conclusion of the whole matter seems to be, that the day is over for getting large salaries without taking off one's kid gloves, and that a good mechanical trade or muscular power to do a fair day's work of unskilled labor will be more likely to enable a man to earn a living than the so-called respectable clerkships and professions. The mistake of necessarily connecting education with professional life, or that physical labor and ignorance must necessarily go together, has done untold mischief in the world, and it is time the mistake was fully corrected. Those who are not content with this must patiently wait till the new woman comes along to earn their bread for them.

A 19-year-old boy in London has just been fined \$50, with the alternative of two months in jail; for falsely representing himself to be a detective sergeant. He had been reading "The adventures of Sherlock Homes," and in the hopes of equalling him had had cards printed with the false designation, but was arrested on his first trying to investigate a case.

A Fearful Weapon.

THE GUN INVENTED BY A MONTREAL MAN CAPABLE OF FIRING 260,000 SHOTS A MINUTE.

New York, April 6.—The Herald says: A native of Montreal has invented a gun which he confidently believes, when it is adopted by all nations, will make war impossible. If all that is claimed for it be true, this gun is certainly the most remarkable piece of ordnance in existence. A description of the piece is furnished by M. Sommers of Montreal, an agent of the inventor, who recently returned from Washington after giving an exhibition of the weapon before M. Patenotre, the French Ambassador, and the military attaché of the Embassy. The most remarkable feature of the gun is that no explosive is used and that its missiles are projected by an agency the nature of which is a profound secret, which, without noise or smoke, is capable of discharging the almost incredible number of 260,000 shots a minute. The gun in general appearance resembles a field piece of the modern type. A little forward of the breach is a funnel, down which the bullets are passed into the gun as fast as two men can pour them. Underneath the gun and between the wheels is placed the mechanism by which the propulsive force is generated. The presence of the pressure gauge might be taken as an indication that compressed air is the mysterious power used. The mechanism is put into action by simply giving a slight oscillating movement to the trail by means of a lever worked by two men, the trail being geared direct to the mechanism. The power of the weapon seems to vary greatly with the length of the piece, one two feet long giving a muzzle velocity of 864 feet a second, while for the nine-foot form the amazing velocity of 3,752 feet is claimed, the bullets in each case being half an inch in diameter. The inventor insists that his principle can be applied to cannon of the largest size.

Over a Precipice.

London, April 6.—What might have proved a most serious accident occurred to-day on the railway from Llanberis at the foot of Mount Snowdon, the highest mountain in Wales, to the top of that mountain. The railway was inaugurated to-day. The first train reached the summit without mishap, but, when returning, the engine jumped from the track on that part of the line where the grade was steepest. The engine went over a precipice and was smashed to pieces. As it left the rails the coupling broke, and it was this alone that prevented a frightful accident. The engineer and stoker jumped from the engine and escaped. The cars started down the grade at a tremendous speed, but they were supplied with powerful brakes, which checked their speed and finally brought them to a standstill. In the meantime some of the persons aboard the train lost their heads, and without heeding the warnings given them jumped from the cars. They were all severely injured. A second train that was descending the mountain crashed into the rear of the first train and smashed a car into kindling wood. Just prior to the crash the occupants of the car had quitted it.

Followed by Wolves.

The Buckingham Post says: Mr. A. Page went through a thrilling experience recently, while in one of MacLaren's lumber shanties, under the foremanship of Mr. J. Miller. One extremely cold morning Mr. Page, with a number of other teamsters, was driving along a road with a big load of logs when a bloodcurdling sound greeted his ears. Shortly after, a large deer emerged from the thick forest and with a bound attempted to leap over a sleigh, but its strength having been about spent, the poor animal sank exhausted, and rested just across the load of logs. The deer was being pursued by a pack of hungry wolves. Mr. Page called to his companions, who were some distance behind. The wolves by this time had arrived, howling and fighting, upon the scene, and with horses, teamster and deer, no doubt the ravenous pack expected a royal feast, but the timely appearance of the other teamsters frightened the beasts, and they scampered off through the woods. After recovering from his fright, Mr. Page took an axe and dispatched the deer, and it was found that the hind quarters had been eaten away by the wolves.
