Watch Repairing.

If you take your watch to a poor watchmaker and it does not keep time, who is to blame?

Don't Blame The Watch.

Don't lay your watch aside with the idea it can not be repaired. The repairs, if skillfully done, are often trifling. Send it to

GEO. W. BEALL,
Watchmaker, Lindsay,

And he will return it to you in as timekeeping order as when new. If spoiled he will tell you so, frankly, and return it without any charge.

Steamer "Greyhound"

SEASON 1897.

Will commence her regular trip on MONDAY, MAY 17th, and will continue during the season.

WILL LEAVE

Fenelon Falls at 7.15 a. m. and 2.30 p. m.
Lindsay at . . . 10.00 a. m. and 5.30 p. m.

ARRIVE

Fenelon Falls at 11.45 a. m. and 7.00 p. m.
Lindsay at . . . 9.00 a. m. and 4.15 p. m.
Call at Blyth and Pleasant Point when signalled.

Fares to Sturgeon Point, Pleasant Point and Blyth, single 20c., return 25c. Fenelon Falls, single 35c., return 50c. Season and Family Tickets at a reduced rate.

WM. SADLER, Purser.
WM. FEE, Captain.

Winter Wheat Experiments at the Agricultural College.

One hundred and eighty-nine plots have been devoted to winter wheat experiments this season at the Ontario Agricultural College. Owing to the late harvest and the exceedingly wet season, no winter wheat bulletin can be issued this year in time to be of much practical service before the period of winter wheat seeding is reached.

In an experiment with ninety-one varieties of winter wheat, grown under similar conditions in 1897, it is found that the seven varieties which stand highest in yield of grain per acre are the same seven varieties which have given the largest yield of grain per acre among eighty-six varieties grown on the experimental plot for four years in succession. The following list gives the names of these seven varieties with the average yield per acre for four years, and also with the average yield per acre for this season.

VARIETIES.	AVERAGE YIELD 4 YEARS.	YIELD 1897.
Dawson's Golden Chaff,	53.4 bus.	53.4 bus.
Early Red Clawson,	50.6 "	58.4 "
Egyptian,	50.2 "	62.3 "
Early Genesee Giant,	50.1 "	57.0 "
Reliable,	49.2 "	50.1 "
Golden Drop,	49.0 "	57.5 "
Imperial Amber,	48.8 "	56.2 "

Although the comparative order of the yields of these seven varieties are not the same in 1897 as in the average of four years, still the fact that they gave the largest yields in both cases among all the varieties tested is a very important feature in the experiment.

Land upon which peas were used as a green manure in 1896, produced a considerably larger yield of winter wheat per acre than similar land upon which rape or buckwheat had been used as a green manure, or which had been worked as a bare summer fallow. This experiment was conducted in duplicate, but for only one year. It is being repeated this season in a similar way.

Large plump seed sown in the autumn of 1896 produced 3 2-3 bushels per acre more than the small plump seed; 6 4-5 bushels per acre more than shrunken seed; and 42 2-3 bushels per acre more than the seed which had been broken with the machine in thrashing. The same number of winter wheat grains were used in the different selections, and the experiment was conducted in duplicate.

In the average of four years' experiments in cutting two varieties of grain at five different stages of ripening, the

results show that the grain cut before maturity does not give as large a yield as that which was allowed to become fully ripened. The details of this experiment can be more fully studied when they are printed in the annual report of the College for 1897.

The average results of an experiment conducted for five years in succession, in sowing winter wheat at different dates in the autumn, show that the seedings of September 2nd and 3rd gave 3-4 of a bushel per acre more than the seedings of September 7th and 9th, and 7 1 2 bushels per acre more than the seedings of September 17th and 20th. It is found that it is not usually advisable to sow winter wheat in the vicinity of Guelph later than the 9th of September.

PREVENTION OF SMUT IN WHEAT.

An experiment in treating seed wheat for the prevention of smut has been conducted for two years with quite satisfactory results. Infected seed wheat not treated for smut produced a crop containing an average of 2146 smut balls per bushel of grain; while that treated with Potassium sulphide produced an average of 109 balls of smut; that treated with copper sulphate, 12 balls of smut, and that treated with hot water 9 balls of smut per bushel of grain. The hot water treatment, which is one of the cheapest and most effectual remedies, consists in immersing seed wheat for fifteen minutes in hot water at a temperature of 132 degrees F. The water should not go below 130 and not above 135 degrees. Not only is the hot water very effectual in killing the smut spores, but it frequently improves the productive power of the seed, as shown by the increased yield of grain per acre. Every farmer in smut infected districts should treat sufficient seed to insure the harvesting of clean grain for seed next year.

DISTRIBUTION OF GRAIN FOR TESTING PURPOSES.

The following three sets of winter wheat varieties will be sent free by mail, in one-half pound lots of each variety, to farmers applying for them, who will carefully test the three kinds in the set which they choose, and will report the results after harvest next year. The seed will be sent out in the order in which the applications are received as long as the supply lasts.

Set No. 1.—Dawson's Golden Chaff, Early Genesee Giant and Early Red Clawson.

Set No. 2.—Dawson's Golden Chaff, Pride of Genesee and Poole.

Set No. 3.—Dawson's Golden Chaff, New Columbia and Imperial Amber.

Each person wishing one of these sets should write to the Experimentalist, Agricultural College, Guelph, mentioning which set he desires; and the grain, with instructions for testing, and the blank form on which to report, will be furnished free of cost to his address, until the supply of grain for distributing becomes exhausted.

C. A. ZAVITZ,
Experimentalist.

Agricultural College, Guelph, Aug. 14.

Probably one of the smallest estates which the Surrogate of King's County, New York, has ever been called upon to attend is that of John R. Sullivan, who died March 19th last. The estate consists of fifty cents, which the testator bequeaths in equal shares to a sister, now dead, and two brothers. The will is regularly drawn, and all the legal requirements have been conformed to.

William Purvis, of Potsdam, N. Y., was the victim of a remarkable accident a few days ago. While he was oiling the machinery in M. H. Brown's butter factory his arm was drawn on to a cylinder set with seventy-one fine saws. It was but the work of an instant for them to slice off his arm into seventy-one pieces before the machinery could be stopped. The man survived the mutilation, and the surgeon who re-amputated his arm near the shoulder thinks he will live.

A peculiar action for slander and damages has been taken in the London courts. The plaintiff is the proprietor of a pork-pie shop in south London, and he alleges that the defendant, a trade rival, came into his establishment one Saturday evening when it was crowded with customers and flung down a dead cat on the counter, with the words, "There, that makes the dozen!" The result was an immediate clearing of the shop, which has remained empty of customers ever since. Heavy damages will be claimed.
