The paid up capital of this institution is one million dollars, behind which there is a reserve fund of another million dollars. After payment of eighty thousand dollars in dividends to its shareholders and the writing off of ten thousand dollars from bank premises account, the profits for the year amount to \$147,819, which is equal to 14.78 of its capital. The hundred dollar shares of this Bank are to-day worth one hundred and ninety-two dollars.

Figures such as these demonstrate in ne uncertain fashion what success a young bank can achieve under capable and judiciously conservative management and warrant the trust of the Canadian people in this young financial giant.

Perhaps the best way to make money out of stocks is to have nothing to do with them.

No man ever admitted that his rheumatism was the result of wading around through swamps after duck.

You can put on a roof that will last a hundred years and be the right kind of a roof every minute. Or you can put on a ten-year roof that will probably leak after the first rain

hits it, and keep leaking till it is rotted away. Either roof will cost you about the same in

money at the stare. But the "Oshawa"shingled roof will be FIRE-PROOF-literally; and wind-proofactually; and lightning-

mill-man say if you asked him to guarantee cedar shingles for even ten years? He certainly would make remarks! And even the best cedar-shingled roof will be

leaking badly inside of ten years. Seven out of ten of them leak the first time it rains. No woodshingled roof is fire-proof for a minute, and the first high wind that catches a loose shingle-whoosh! goes half your shingled roof over into the next township.
