

Farm and Garden

DUTCH DRAGGING.

It Makes Convenient Corners and is Really Simple.

Dragging "Dutch fashion" is nothing new. I learned it more than twenty years ago. Still, it may be new to some and prove of value. Its advantages are that it drags neither lengthwise nor square across the furrows and makes easier corners than the ordinary diagonal dragging. Plain Dutch fashion is shown in diagram below. Commence by "striking out" from A to B. Turn to the right and go back on the left side of first track till you reach

PLAIN DUTCH HARROWING.

edge of field near A. Drive across the first track and back on the opposite side to the other end. Cross over and back on opposite side again.

Continue crossing over at each end inside your last track and outside the last track along the sides. When half done the piece will look like first diagram, and the next trip would be from C to D, to E, to F, to C. When done the last trip would be from G to H, and the piece will have been dragged twice diagonally in opposite directions. This works well on pieces that are nearly square or not more than twice as long as wide. Of late we have found that it is economy in plowing, cultivating, etc., to make our lands as long as possible. On these Dutch dragging did not work as well, as it was too near lengthwise the furrows, so we hit upon what we call "crazy Dutch," shown in second diagram. We "strike out" zigzag across the piece two or three or more times, according to its length compared to width. The picture shows three times—viz: From A to B, to C, to D. Turn to the right and go back on

VARIATION ON DUTCH FASHION.

left to first track to C and drive across it. Go on right side to B, then up left side to A. Cross over and back on left side of B. Drive straight across the first two tracks, turn to the left and go on right side to C, where you will cross the two tracks again, and go on left side to D. Always go straight ahead till you get to the edge of the field before you make a turn.

When half done it will look like the picture, and the next trip would be from E to F, G, H, I, J, K, L, E. When done the last trip will be from M to N, O, P. This looks complicated, but it isn't half as hard to do it as it is to tell about it. At least it seems that way to me just now. In striking out we never measure a piece, but guess at the angles. However, the truer you get it struck out the better it works out in finishing, concludes "Uncle Reuben" in writing the foregoing to the Rural New Yorker.

Oat Byproducts.

There is a class of byproducts from the cereal mills of Iowa that merit greater attention on the part of our feeders. In this class are the oat feeds, flours, middlings, shorts, and possibly the bran, too, may be used. These feeds are well up in protein and have appreciable percentages of fat, which render them particularly desirable as hog feeds, and possibly their use may with profit be extended to horses. This is specially true of the flour, middlings and shorts. The bran, however, has too high a content of crude fiber to give it a very great value as a flesh producer or to render it palatable to the feeding animal. These are comparatively new feeds, and their practical worth has not been definitely established, but from their chemical composition it seems evident that experimentation with practical feeding tests will fully demonstrate their ranking well with similar wheat products, if not outclassing them.—Louis G. Michael.

STOP!

And think of what you are losing if you are not a customer of Terrill Bros. These May days are days of special offerings. Every department is bristling with money-saving opportunities. Then you are given a cash register check with every purchase, which are redeemable in any kind of merchandise you wish to select. We like a small per cent. on large sales better than a large per cent on small sales. That's why we save you money. Become a customer to-day. Save your checks.

Prices like these coupled with a certainty of good goods should induce orders.

Boots and Shoes.

Boys' Clothing.

Mothers know how hard boys are on their clothes, and the number of suits they get them in a year, but we ask you to try

"The Lion Brand"

for boys, and you won't be buying as many suits as you have been. Lion Brand is the best made boys' clothing in Canada, and the cost is very moderate. Why not have the best?

Cheapest General Store in the County.

It's like throwing money away to destroy one of our cash register checks.

Trade at Terrills' and save your checks—they are valuable.

Scenes in a Union Depot.

Ebbacaygeon Independent.

Miss Luella Z. Drake, reader and lady baritone, presented an Entertainment at the Town Hall on Friday evening that was pleasing and amusing. With over forty local assistants, Miss Drake gave a performance after only two rehearsals which disclose to a surprising extent the talent which exists, and what can be done under skilful and energetic direction. Miss Drake is a clever actress and a singer with wonderful control of an unusual voice, which she displayed in her number "I love you all the time," taking both masculine and feminine parts. The Automobile song was a pretty feature, Miss Drake giving a surprise by bringing out Mr. W. Henderson as a vocalist. They sang together, while little girls twirling white parasols gave the auto effects. The entrance of nine chorus girls, the same number of young men, and a lot of others filled the Depot with a splendid tableau. It is then that a widow finds she has lost her ticket and purse, and the Chorus Company give a performance to help her out of her difficulty. The young ladies dressed alike in brown and white, brown dress, white blouse, and brown hats and veils, presented as charming a picture as could be produced by any village in Ontario.

MAY 7.

Wood Ashes as Fertilizer.

Wood ashes are obtainable wherever wood is burned in large quantities. The potash contained in them is water soluble and easily leaches out. Wood ashes are excellent as fertilizer, and none should be allowed to go to waste. Do not apply at base of plants, but spread broadcast about bushes or trees.

Alfalfa Seeding.

Ohio authorities state that alfalfa may be seeded at any time after spring frosts are over until the middle of August, provided the seed bed is in proper condition. It was found that upland clay and sandy first and second bottom lands have produced the heaviest maximum and average yields.

Clean food and clean drink are absolutely necessary if you would have healthy hogs.

Good care will do much to prevent disease. Remember that prevention is always easier and safer than cure.

The successful hog man has many little things to look out for. Disease always begins in a small way.

Sows should be weeded out as well as cows. Keep only good milkers.

House and Lot for Sale.

MRS. MARY HAYES,
Fenelon Falls.

Penetanguishene Herald:—It is said that at least four hundred and fifty thousand meteors fall from the heavens and strike the earth every hour during the year; and yet when a man goes home with a damaged hat, and tells his wife that he was struck by a meteor, she will not believe him.

FOR THE WEE ONES.

Little Helps in Bringing Up Some of the Spring Crops.

In making this pig feeding device I use a large packing box six or eight feet long or as long as I can get it. The box should be about four and a half feet high and made of good thick boards. I take the boards from the top so as to make an opening. I also make an opening in one side of the box like

FEEDER FOR SMALL PIGS.

whole length about two and one-half feet high; then make a trough the length of the box and place it next to the other side and make as many stalls as there are pigs, so that each one will have a stall of its own to feed from. This is a very good way to feed small pigs, as each one has an equal chance at the trough, and the sow or other older pigs cannot get in to interfere with them. I find that by the use of this rig I have no runts.—Florence Fletcher, Ohio.

Coop For Little Chicks.

This is a very light and cheap chicken coop that is easily made and is very convenient. Make two frames and

hinge them together, as shown, and cover them with waterproof building paper. Two triangular frames are used for the front and back. The front frame is slatted across, and the back frame is covered with paper. Both triangular frames are fastened to the main coop with staples and hooks. These coops may be folded together and packed away in little space.—Farm Press.
