## COLD STORAGE OF APPLES IN IOWA

Results of Experiments are Made Public—Better to Put Fruit in Storage As Soon as Picked

The result of some investigations in the cold storage of apples in Iowa has recently been made public. The fruit was held in storage at a temperature of 34 degrees during one winter, and 23 degrees the following winter. Firm, hard, well-colored fruit kept best. Northwestern Greenings of this type remained in good condition a month longer than poorly colored, early picked fruit. Fruit stored immediately after picking was in better condition and lasted longer after removal from storage than samples which were harvested at the same time and kept in an open shed for two weeks before being placed in cold storage.

No advantage was found in wrapping the apples in paper, except with the more tender varieties. With some varieties, such as the North-western Greening, no difference was noted between the different ways of packing. Wealthy apples kept best in boxes, bruising was greater in barrels and shrinkage was greater in slat crates than in either boxes or barrels. Practically these same results were obtained some years ago by the federal bureau of plant industry.

## RIGHT AGE OF BIRDS

For Egg Production—Some Fowls are Too Old

There are people who have the right variety of fowls, who house and feed them properly, and yet who cannot obtain eggs early in the winter because their fowls are too old. It is seldom that it pays to keep hens for laying after they are two and a half years old; not that they will not give a profit, but that younger fowls will give a greater profit. A great many poultrymen who make a specialty of winter egg production keep nothing but pullets, disposing of the one-year old hens before it is time to put them in the winter quarters. Early hatched pullets, if properly grown, ought to begin laying in October or early November and continue to lay through the winter. Yearling hens seldom begin laying much before the 1st of January and older hens not until later. It is the November and December eggs that bring the high prices. The laying breeds should begin laying when about five months old; general purpose breeds at six months, and the meat breeds at seven or eight months.

## SERMONS BOILED DOWN

The best place to feel for the needy is in your pocket.  
 The cross Christian is not bearing the Christian's cross.  
 Many mistake the worship of customs for the custom of worship.  
 People who are hungry to be martyrs make a good many miserable.  
 Love may seem to serve blindly, but the service illumines the world.  
 Many a saint would stoop in service but for fear of losing his tin halo.

## EXCLUDE WASTERS

Practically Worthless Birds Should be Got Rid Of

It is extremely important to give birds that are destined to be the future breeding stock as much freedom as possible, in order to develop fully the qualities that are so essential a factor towards success. This can only be accomplished when the ground is not overcrowded nor the birds cramped in their roosting quarters. It is quite impossible to say just how much space is necessary to maintain fowls healthy and strong, since so much depends upon the variety, the nature of the soil, the time of year, and several other considerations. The health and productiveness of the birds are the only satisfactory guide. Those who have plenty of space at their command need not perhaps trouble themselves about the matter although they would be well advised to do so, but to those whose space is limited this question is one of great importance. I have often and often seen a small poultry yard greatly overstocked, with the inevitable result that none of the birds were thriving well. Had half the number been kept in all probability the actual, not the proportional, supply of eggs would have been greater. In very many cases quite half the stock consisted of practically worthless birds, which were consuming food, occupying space, and involving labor, and thus reducing the profitability of the remaining fowls.

There are several ways of classifying fowls, but there is none so useful as by means of their economic qualities. In this manner we have four great classes, namely, the fancy breeds, the table breeds, the laying breeds, and the general purpose breeds. Fancy fowls are those which are bred and selected for their outward characteristics, such as feather markings, comb, wattles, shape, etc. Such birds may or may not possess good economic qualities; as a rule the internal characteristics have been sacrificed for the external. Table birds are those which possess a large breast development and flesh of an excellent flavor and texture, but generally speaking they are comparatively poor layers. The laying breeds, on the other hand, are very prolific, but possess poor edible qualities, while the general purpose fowls are those which combine both laying and table properties. They are better table fowls than the laying breeds, but produce fewer eggs, while they lay more eggs than do the table varieties, but they possess inferior edible qualities.

## TIGHT COLLARS

A well-known doctor considers it remarkable that no one seems to have laid stress on the fact that such slight obstacles to the free circulation of the blood through the vessels of the brain may adversely influence the health of those who are in the habit of wearing tightly-fitting neck clothes.

The fact appears to be well known to veterinary surgeons, who tell us that neck constriction through badly fitting harness is a causative factor in "stagers" in horses. It seems to be equally well known that dogs suffer a great deal through having to wear tightly fitting collars. Is it too much, then, he asks, to argue that those of us who wear our own collars too tightly buttoned may find that practice some explanation of symptoms ascribed to other causes?

## GLASSES

Will not help your eyes if they are not properly fitted. Each eye must be examined separately, and fitted with the proper lens. Then the frame must be just as carefully fitted to the face, that it may hold the lenses in proper position. The effect of perfectly fitting lenses may be spoiled by badly fitting frames. We shall be pleased to talk over the matter of glasses with you any day from 8.30 a. m. to 6 p. m.
