8c.
Buy five yards of Taffeta Baby Ribbon: nearly every color to choose from.

TERRILL BROS. FENELON FALLS.

NOURISH FEET OF HORSES WELL

Canadian Breeders of Clydesdales Should Know How to Get Good Foot and How to Keep It

Horsemen should know more about growing and keep horses' feet right than they do. Canadian breeders of Clydesdales, trained as they are to recognize merit in a wide hoof head a broad strong foot built to wear and last on a hard city pavement, have learned a great deal more about the importance of a good foot than about how to get it, and how to keep it. The fine free-step of the broad-footed Clydesdale with the foot lifted jauntily, carried straight ahead and set firmly down, tells a story of something more than nicely adjusted articulation of joints and co-ordination of muscles, with lines of power identical with those of resistance. Does it not tell a story of foot steps that are free from pain and all feeling of discomfort? Going farther back, does it not mean a good free circulation of blood, and of a circulation able to take up waste matter—in fact, of a well nourished foot?

Dry hard feet tell a story of insufficient nourishment. Certain conditions may assist in producing this situation, and it is wise to correct or alleviate them as much as possible. In stables where feet appear to become dried out, attempts to correct this by stuffing the frog with wet clay have been popular. This has been a partial success at least, but it is doubtful if a horse appreciates going to bed with his feet soaked with cold mud, much more than this his owner would, although in the latter case the consequences might be more immediately disastrous.

There might be a little lost and a good deal gained if this side of the argument were kept more prominently in view by horsemen whose chargers are troubled with dry hard or contracted feet. Such means are conducive to general good health and thrift, accompanied by others well known to be useful in stimulating the nourishment of any part, by stimulating the blood circulation. Such methods as standing, "tubbing" the feet in warm water, afterwards giving a cold bath and drying thoroughly, should be well worth a patient trial for feet showing a tendency to become dry and brittle. The human fingernail when it becomes dry and brittle usually becomes thin as well. Treatment with olive oil will usually improve it in a very short time. The same could be tried on a dry brittle hoof. The use of a very light blister around the hoof head is known to be of benefit. All of such plans should appear more hopeful and more humane than standing a horse for hours in wet clay or stuffing his feet with it.—Canadian Farm.

How to Be Miserable

If you wish to be miserable, think about yourself, about what you want, what you like, what respect people ought to pay you; and then to you nothing will be pure. You will spoil everything you touch, you will make misery for yourself out of everything which God sends you; you will be as wretched as you choose.—Charles Kingsley.

USING WOOD SCRAPS

Tag Ends Left from Big Work Not Wasted Nowadays

In these days of high-priced lumber the utilization of the small pieces of wood formerly considered of little or no value assumes considerable importance. The Woodworker gives a number of uses for these scraps.

Brush manufacturers have made some headway in using waste from furniture factories, but the pieces are of so many sizes and of such irregular shapes that success has been only partial. A small porch chair shop has been able to draw a considerable part of its raw material from the waste of boat factories.

Wheelwrights save the ends cut from spokes and shape them in lathes for chisel, gimlet, auger and other small tool handles. Wagon builders occasionally make use of scraps of hardwoods for lining brake blocks. Sash and blind makers save their scraps for the match factories, or if the pieces are large enough they are worked into corner blocks, rose blocks and balusters.

Coopers recut broken or defective staves of the larger sizes and make kegs or smaller vessels of them. Small headings are economically manufactured in that way. Occasionally defective staves and headings are made into dowels. Basket makers save the cores from which veneer has been cut and saw them into thin slats for baskets and crate covers.

Some of the makers on interior finish work their odds and ends of soft woods into small boxes and the hardwood scraps are made into parquet flooring. Planing mills work scraps and broken pieces, unsalable in that form, into boxes for apples, medicines and other articles and into brackets, balusters, rose blocks and small quarter-round moulding.

FENELON FALLS MARKETS

Fenelon Falls, Friday, Mar. 15, 1912
Wheat, Scotch or Fife, 75c. to 80c.

PETERBORO BUSINESS COLLEGE
GEO. SPOTTON, PRESIDENT
E. E. Logan, Principal.

GLASSES

Will not help your eyes if they are not properly fitted. Each eye must be examined separately, and fitted with the proper lens.

Then the frame must be just as carefully fitted to the face, that it may hold the lenses in proper position.

The effect of perfectly fitting lenses may be spoiled by badly fitting frames.

We shall be pleased to talk over the matter of glasses with you any day from 8.30 a. m. to 6 p. m.
