

### HEAD-REST FOR SEWING CHAIR

Many sewing chairs which women love to use are uncomfortable, despite the fact that they are low and easy.

In many respects. One of the greatest troubles with these chairs is that their makers put too short a back on them and there is, therefore, no place where the person occupying them can rest her head.

It is right and proper that every thing possible should be done to make the home comfortable, and one of the things that can easily be done is to put a headrest on the low-backed chair so that when mother finishes her evening tasks she can sit in the little rocker and rest herself in perfect contentment.

This headrest is detachable and can be put on any chair. The size of the finished product and the material which is used to make it can be regulated by the necessities of the occasion.

The general shape and character of the rest is shown in the sketch. The cross piece should be upholstered, but this will not be difficult, the whole thing being of very simple construction.

### CHICKEN FEEDING

They Can Look After Their Own Wants With This Apparatus

Many amateur chicken farmers are tied down to the home for fear the chickens will have to go hungry if there is no one around to feed them. One brainy chicken farmer devised this fountain feeder which the chickens operate. His chickens have food when they want it, and never is there too much left on the ground to get mouldy and cause ill-health among the flock, and never an evening is there any grain on the ground to tempt rats.

The device is a galvanized iron supply fount which is filled with grain and which has at its base a revolving wheel mounted on extremely sensitive though very strong and durable, bearings.

A light shaft extends down from this wheel to a cylinder made of wire mesh. This cylinder is filled with grain also, but the mesh is so close it cannot fall out. The machine is so mounted that the cylinder is just the height of a chicken's head. The chickens see the grain in the cylinder and peck at it. The slightest touch on the cylinder causes the wheel in the fount to revolve and this throws out grain against an inverted cone which scatters it over the ground. As soon as the wheel stops revolving, and the weight of the grain stops it very quickly, the supply is shut off until another chicken pecks at the cylinder.

### Shoe-string Tips

The loss of the metal tips to shoe laces causes no end of annoyance when it is necessary to lace the shoes by passing them through eyelets and as most children's shoes have eyelets such annoyance is pretty general. This can be obviated by securing a piece of fine wire two inches long and passing it through the lacing about

half an inch from the end. The wire should then be twisted around the lacing as far as the cloth or leather goes and then twisted together, the ends being buried in the twist. Treat each end this way and a metal tip is given to the lacing that cannot come off.

Of the 11,000,000 natives of Egypt only 600,000 can read and write.

### Taskmaster Not Wanted

The Dolgely, Wales, Board of Guardians decided to dispense with the services of the taskmaster at the workhouse on the grounds that owing to the old age pensions and the boarding-house system, his duties at the workhouse have decreased greatly.

### JUDGING MEN'S AGES

Bachelor Claims Young Women Cannot Do It Correctly

"Women—especially young women—seem to have no capacity for judging a man's age." This is the mature opinion of "Bachelor of Forty," who has made some exhaustive tests in the matter, and has some interesting conclusions to advance. The truth of his statements, he says, can be tested by all, and he is convinced that anyone who cares to take the trouble to find out will discover that men between the ages of 25 and 50 always appear from five to ten years older to the ordinary young women in her twenties. After 50 and up to 65 men appear to these same young women as being from five to ten years younger than they really are. There is, however, a period in the middle thirties when young women seem to judge a man's age fairly exactly.

### NOVEL CHEESE KNIFE

Movable Blades Mounted on Rod That Runs Through Middle

An ingenious method of cutting cheese has been designed by a New York woman. A rod has three broad, movable blades slidably mounted upon it. The cheese—the cutter is designed for use on round cheese, by the way—is placed on a dish and the rod thrust through the center. The three blades,

KEEPS CHEESE FRESH, TOO.

being light in weight, can rest on top of the cheese. When a slice or wedge of cheese is desired it can be cut quickly and accurately by pressing down two of the blades with the requisite width between them. Another advantage of this device, and the probable reason for the third blade, is the fact that it keeps the remainder of the cheese fresh by closing the outs against the air. The blades are about the depth of the usual round cheese and two of them can be kept pressed against the cuts where the inside is exposed.

### HOW ELEPHANTS SLEEP

In One Sense Are Lightest Sleepers—Seldom Lie Down

Whether elephants ever lie down is a question which nature students are in doubt about. One authority, Gordon Cumming, made known the fact that at one time he thought he had found evidence in marks on the ground that the bulls of one herd did stretch themselves out at full length for few hours' rest at about midnight, but says Harper's Weekly, he contends that the young and the cows always remained on their feet.

Another authority, Selous, has expressed doubt whether even the old bulls lie down. He tells of one herd that was known to have kept moving and feeding throughout the twenty-four hours. "Except when rolling in mud and water," he says, "it is likely that an African elephant never lies down during his whole life."

However this may be, the most competent authorities seem to agree that this animal sleeps less and more lightly than any other. J. L. Kipling, the father of the writer, has estimated the period of slumber taken standing up to average about four hours in the twenty-four, and his estimate has been employed by the son in an amusing passage for one of his stories, "Moti Guj," wherein the sleep of the elephant is represented as consisting of an hour's fidgeting on one side and a similar period on the other, followed throughout the rest of the night "by long low, rumbling solloquies."

### The Growth of Buenos Ayres

Of all the great cities, Buenos Ayres is said to be growing the most rapidly. The most artistically built of the cities of the new world, it reminds the visitor of Madrid or Paris. This magnificent capital of the Argentine Republic had in 1800 only 40,000 inhabitants; in 1852, 76,000; in 1888, 187,000; in 1887, 429,000; in 1896, 655,000; in 1904, 951,000; the census of 1910 brought it up to 1,282,117 while the population since that time has grown astonishingly. The Mayor, in a recent public speech, said that in four years the population of Buenos Ayres, at the present rate of growth, would surpass that of Paris.

Next to the elephant, the white rhinoceros of Africa is the largest animal known.

## BUILDING CONTRACTS

We are prepared to take contracts for houses, summer cottages, etc. It will pay you to get our estimates. Doors and sash and interior finish always in stock. Planing and matching done to order.

**FENELON FALLS PLANING MILL**  
A. TEIRS, PROPRIETOR.

## All Skin Remedies Fail?

Many eczema sufferers have failed so utterly with salves and other "discoveries" that even the assurance of the physician or druggist cannot induce them to invest another dollar in any remedy.

It is to these discouraged sufferers in particular that we now offer, at only 25 cents, a trial bottle of the accepted standard eczema remedy, a simple wash of oil of wintergreen, thymol and glycerine, as compounded in D. D. D. Prescription.

Hundreds of cures have convinced us and we know you can prove instantly with the first application of D. D. D. Prescription that it takes away the itch at once. You have only to spend a quarter to get instant relief. Isn't it worth while.

A. J. GOULD  
DRUGGIST.
