Trent Watershed Survey.

From Conservation.

That practically all the pine in the Trent valley has been removed, that the whole area has been burned over at least once, and that as the result of fires 150,000 acres are practically a desert, are conclusions set forth in a report entitled Trent Watershed Survey, recent published by the Commission of Conservation. The Dominion Government has a special interest in this particular region, as the capital invested in the Trent canal amounts to upwards of \$10,000,000, and the removal of the forest cover has an important effect on the water supply.

For the most part the land is non-agricultural, and disastrous consequences have followed its settlement by farmers. Enough second-growth timber is present, however, to warrant a policy of conservation, which should be carried out under Dominion, Provincial or Municipal control. A fire-protective organization should be perfected, and the whole area carefully administered with a view to perpetuating the forest resources.

The report, embodying these conclusions, was compiled by Dr. C. D. Howe and Mr. J. H. White, of the Faculty of Forestry, University of Toronto, and has an introductory discussion by Dr. B. E. Fernow. It consists of 156 pages, and is illustrated with 32 half-tone engravings and 3 maps.

Women's Institute Meeting.

A very pleasant and well attended meeting of the Women's Institute was held on Friday afternoon, March 20, at the home of Mrs. George Rutherford. The President, Mrs. Jas. Lamb, occupied the chair. After the minutes of last meeting were read and adopted and the roll called, a good musical and literary programme was given. Miss Richardson of Peterboro rendered a piano solo, which was highly appreciated. Readings were given by Mrs. Thos. Poulson, Mrs. Dr. Gould and Miss Maud Patten. It was regretted that the member who was to have led in the subject "Success from different Standpoints" was absent from the meeting. The subject was taken up, however, and was handled in a satisfactory manner by Mrs. Dr. Gould. The President and several members also gave suggestions on the subject. A musical committee for the month was appointed, consisting of Mrs. Dr. Gould and Miss Lilly Patten. It was decided to hold the next meeting at the home of Mrs. Walter B. Jordan, the subject chosen being "What makes a successful Institute," to be led by Miss B. Abbott. After the close of the meeting an informal musical programme of vocal and instrumental selections was given by Mrs. Dr. Gould and Miss Richardson, which gave much pleasure to all. The hostess afterwards served dainty and generous refreshments, which were enjoyed during a social half hour spent pleasantly by the members before leaving.

Address and Presentation.

A number of friends and neighbors assembled at the home of Mrs. T. H. Rutherford on the evening of the 18th inst. and presented Mrs. Rutherford with a handsome cut glass fruit bowl, cream pitcher and sugar bowl. Miss Mabel Rutherford was also presented with a cut glass butter plate and Miss Ethel with a beautiful cut glass vase. The following address was read:

Mrs. T. H. Rutherford and family.
Dear Friends:

We, a company of your friends and neighbors, wish to express our deep sorrow that circumstances have caused your removal from our midst. We wish to express our unceasing friendship and interest in your well-being.

We hope that the past, with its light and shadow, its fellowship and cheer may become to you and to us, one of the hallowing influences of our lives, may that friendship be like the altar fire which never dies out. We wish you every blessing for the future trusting that joy will await you in the coming days and that you may become a blessing to those among whom you will yet be called upon to live.

We leave these small tokens of our unending friendship, may they ever remind you of the bright hours spent in our neighborhood and of the hallowing influence of true lives. Signed on behalf of the friends and neighbors.

After the presentation refreshments were served and a pleasant evening spent.

Millinery Openings.

Spring is here. If in doubt look in the millinery windows. There you may see flowers, flowers and still more flowers—that might have been grown in a fairy garden, so dainty are they. Then, especially if you happen to be of the feminine persuasion, curiosity takes you inside and there you find the promise of the windows fulfilled. For the Spring openings in the local millinery rooms are on. Who could resist the impulse to "try on" the many delightful creations of the milliners' art? Flowers in tiny bunches, or in masses, or trailing hither and yon; beautiful ribbons skillfully made into fascinating knots attached to the hat at the most unexpected but perfectly correct angle; trimmings of tulle—even a filmy butterfly made wonderfully enough to puzzle the government entomologist. No matter—the hats are delightful, and for a while at least you may be as gay as you please, although later, if of quiet taste, you may choose one of the more sedate models. Perhaps a handmade hat of silk, or one of the pretty ready made styles. Following is a description of a few of the most representative in the showing of Mr. Wm. Campbell's.

A very smart black tailored hat made of tagel straw with a fine pleating of voile and a twist of tango ribbon around the crown, also a large tulle butterfly on the back.

Also a very becoming and artistic hat made in a poke shape of sax and black taffeta, with covering of silk braid and trimming of sax blue corded ribbon made in tailored bow daintily finished small flowers at side and back.

A very neat and girlish hat made in java straw, having a trimming of blue satin streamers and small wreath of beauty roses around the crown, very much admired by the young girls.

Among the most striking and desirable models in Miss Washburn's show rooms are seen:

One of the newest hats of the season, was a plaque or chinese hat in natter blue hemp tagel. This plaque has an around bandeau raised high at the back. Twine color lace and natter blue velvet ribbon were draped across the front of the hat and brought over to bandeau at the back, where velvet was tied in a loose bow with one long sash, end caught in with flowers in harmonizing shades.

A striking model was a small wattleau shape in madonna blue braid, the drop bandeau at the back was trimmed with blue metallic ribbon, small roses and forget-me-nots, a band of ribbon and flowers across the front, completed this charming hat.

A very striking hat was a white sailor faced with black leghorn, the upper brim overlaid with black accordinian pleated lace, a wreath of small roses around the crown a sequin butterfly poised on the brim at back completed this pretty model.

A very up to date model was a black moire turban draped high at side, and had for its only trimming a tied ostrich mount, finished with a jet ornament.

Personal.

Mr. and Mrs. F. D. Booth have removed to Lucan, Ont. Mr. Booth's place in the Creamery is being filled by Mr. Ronald McIntosh, Professor of Husbandry Dairying, who has recently returned from Kingston after creditably passing his examinations there.

A telegram was received by Mrs. Lord a few days ago announcing the dangerous illness of her brother, Judge McLean of Battleford, but later news reports the Judge as improving.

Mrs. F. N. Rutherford left on Monday for Detroit.

Miss E. Nie, returned on Saturday after visiting relatives in Palmerston.

Miss Richardson of Peterboro, is visiting her aunt, Mrs. Thos. Poulson.

Free Drainage Surveys.

Farmers! Have you a field on your place that is too "wet, cold and sour"? Drainage will reclaim it and make it one of the best fields on the farm. Drainage does four things. First it removes the surplus water and makes it possible to cultivate and seed about three weeks earlier in the spring than on the same land when undrained. Secondly it makes the land from ten to fifteen degrees warmer than if not drained, and this warmth germinates the seed properly and gives a good stand of grain. Thirdly, it lets plenty of air down to the roots of the plants, which is necessary for satisfactory growth. Fourthly, it makes the soil more porous, and this in turn causes the soil to store up more water for the use of the crops in time of growth. Frequently the increase of crop in one year pays for the drainage, and seldom or never does it take longer than three years, so that drainage pays from 33 per cent to 100 per cent per annum on the money invested. Have you difficulties in drainage? The Department of Physics of the Ontario Agricultural College will assist you on application. They will make you a complete survey of the area to be drained, or run a single line of drain, and when done furnish you with a finished map showing location of drains, grades, sizes of tile, etc., a detailed guide for the thorough drainage of the land in question. No charge is made for the services of these drainage advisors, nor for the map, only the applicant pays the travelling expenses in connection with his survey, amounting usually to not more than a couple of dollars.

Drop a card to the Department of Physics, O.A.C., Guelph, for the regular application form.

Experiments with Farm Crops.

The members of the Ontario Agricultural and Experimental Union are pleased to state that for 1914 they are prepared to distribute into every township of Ontario material of high quality for experiments with Grains, Fodder Crops, Roots, Grasses, Clovers and Alfalfas, as follows:

1. Testing two varieties of Oats, two plots.
- 2a. Testing O. A. C. No. 21 Barley and Emmer, 2 plots.
- 2b. Testing two varieties of two-rowed Barley 2 plots.
3. Testing two varieties of Hulless Barley, 2 plots.
4. Testing two varieties of Spring Wheat, 2 plots.
5. Testing two varieties of Buckwheat 2 plots.
6. Testing two varieties of Field Peas, 2 plots.
7. Testing two varieties of Spring Rye 2 plots.
8. Testing two varieties of Soy, Soja or Japanese Beans, 2 plots.
9. Testing three varieties of Hurling Corn, 3 plots.
10. Testing three varieties of Mangals, 3 plots.
11. Testing two varieties of Sugar Beets for feeding purposes, 2 plots.
12. Testing three varieties of Swedish Turnips, 3 plots.
13. Testing two varieties of Fall Turnips, 2 plots.
14. Testing two varieties of Carrots, 2 plots.
15. Testing three varieties of Fodder and Silage Corn, 3 plots.
16. Testing three varieties of Millet, 3 plots.
17. Testing two varieties of Sorghum 2 plots.
18. Testing Grass Peas and two varieties of Vetches, 3 plots.
19. Testing Rape, Kale and Field Cabbage, 3 plots.
20. Testing three varieties of Clover, 3 plots.
21. Testing two varieties of Alfalfa 2 plots.
22. Testing four varieties of Grasses, 4 plots.
23. Testing three varieties of Field Beans, 3 plots.
24. Testing two varieties of Sweet Corn, 2 plots.
25. Testing two varieties of potatoes, 2 plots.
26. Testing three grain mixtures for grain production.
27. Testing three grain mixtures for Fodder production, 3 plots.

Each plot is to be two rods long by one rod wide, except No. 28, which is to be one rod square.

Any person in Ontario may choose any ONE of the experiments for 1914 and apply for the same. The material will be furnished in the order in which the applications are received, while the supply lasts. It might be well for each applicant to make a second choice, for fear the first could not be granted. All material will be furnished entirely free of charge to each applicant, and the produce will, of course, become the property of the person who conducts the experiment. Each person applying for an experiment should write his name and address very carefully, and should give the name of the County in which he lives.

BURGOYNE'S BIG SALE.

Burgoyne's big annual sale commences Wednesday, April. Great bargains in all departments. See bills.
