HOG RAISING.

How to Feed and the Weight at Which

The subjoined practical paper was read by Geo. Robertson of Lucknow at the annual meeting of the Dominion Grange,

In hog raising the first thing is to decide which breed you fancy and every man has a fancy of his own, and outside of that he cannot give the same care and attention. We should remember that the times are changing, and we should be ready to leaning against the wall, peering down change with them. The market of ten years ago was for heavy pork. To-day it is the very opposite, hence the necessity of change, for the market is very stubborn. It matters not how many months or even years you have fed your hog, or how many bushels of grain you have fed the pleading you can do

WILL NOT CHANGE THE PUBLIC TASTE to heavy pork at the present. Hence the necessity of breeding a long and deep sided hog that will grow to considerable weight without getting too thick on the "Not that !" I said pleadingly. Why back, for a thick-backed hog, no matter what weight he may be, will cut fat when

The best hog I get is bred from a Berkshire sow and a Yorkshire or Tamworth boar. The Yorkshires come all white and liable to cripple. Feed sows liberally after the young ones are one week old and leave them on the sow as long as possible. When they are three weeks sow is not wanted to breed, I would let likely take place at the end of twelve weeks. To succeed as a feeder

ONE MUST KNOW HIS ANIMAL individually, and not be known by them-I do not think that anyone can lay down a stated ration that will give satisfaction marbled or streaky, as the bacon curer would call it. In all successful feeding growth does not mean so much a month, have been fed and bred for lean meat for orientalist, is certainly the most in-I placed the lamp upon the desk years, and any deviation from that would teresting. "LITTLE MONSIEUR."

There are but three or four ladies in France who have availed themselves of the benefits of that law which provides that women may wear male attire on obtaining a permit from the authorities, which can be had for a merely nominal fee if valid reasons wear male garments. Among these few ladies, Madame Dieulafoy, the wife of the well-known explorer and is to-day frequently seen in the literary and scientific society of Paris. Not long ago a German journalist requested an interview of Madame Dieulafoy, whom he had never seen, and received a very gracious reply to call the next day. He must evidently have been under the impression that she only wears male attire when going out, and that she, like all others Mr. D. D. McPherson M.P.P. for of her sex, would prefer the soft gowns, now so much in use by Pariswainscoting of old oak and blue cloth

maning precareco. An isolated plant having 27 electric motors and 5000 incandescent lamps is certainly more than ordinarily interesting. Such an installation is that in the United States Government printing office at Washington, D.C. Printing presses of all sizes and types from large web presses printing at the rate of 11,000 per hour down to the "eight medium Gordon presses," also cutting, indexing, stabbing, folding and casemaking machines, signature presses; blowers, rolling and sewing machines, are all operated by individual motors. These latter are operated by a onesixth horse-power motor connected direct to a worm-gear reducing motion. A reduction in some cases is required from 1800 revolutions down to 135. This office now has in use daily 117 direct-connected and 10 belted motors, varying in size from one-sixth to 30 horse-power, making a total of 383 horse-power in electric motors. Added to this fis a 30 horse-power motor in use in connection with the electric dlevator employed, making in all a total of 413 horse-power.

Transmission of Electrical Power. The world-wide renown of Niagara Falls has lent peculiar distinction to the great electric power plant recently installed there, but the American Machinist says that "in so far as the Niagara plant is a long-distance one the work done up to date has been surpassed in several instances, both in the distance covered and the amount of power transmitted." Many of the greatest electric power plants are among the Rocky Mountains and on the Pacific Coast. At Fresno Cal., a reservoir on the brow of a near-by mountain supplies the heaviest head of water yet used for such a purpose. 1400 feet, and the power is distributed over a distance of 35 miles. In some Parlor Suites, Bedroom Suites, of the western installations the water, after serving its purpose in generat ing electric power, is utilized for irri-
