

TAKING CARE OF HORSES.

Much Valuable Information Given in a Brief Space.

The best feed for horses of whatever class is oats, corn, bran and hay. When a horse is off his feed, or slightly ailing from any cause not indicative of violent disease, bran mash with good nursing will bring him out all right in nine cases out of ten.

For young colts alone with grass or hay, according to the season, should be allowed. In winter half oats and corn, ground or whole, may be fed with benefit, unless the young things are intended for racing and are in warm stables, when the corn would be too heating.

Watering is of fully as much importance as the feeding. A horse is particularly as to the water he drinks, yet he may be accustomed to any water fit for human use. Running water is best. That of ponds without outlet or inlet is the worst, and should never be used.

Water should always be given, if the horse will drink, before feeding and immediately after feeding. In hot weather water frequently. Only a few quarts should be given at a time, for a heated horse will take more than is good for him.

Blanketing is always necessary when the horse is standing in the stable in winter. A light sheet is about as necessary in summer. A horse should always be blanketed when standing in a draft or in rain.

The feet are half the horse. In fact, a horse with bad feet is as nearly a worthless animal as is possible. When the horse is brought in from the road, each foot should be examined with a pick to see that no gravel or hard substance has found lodgment between the frog and shoe.

Live Stock Points. The horse is not going. The same day the report is spread abroad that a prominent New York dry goods merchant will use horse-drawn delivery wagons comes also the telegram that the bay mare Martha Wilkes, with a trotting record of 2:08, has been bought for the Prussian crown stables, and will be taken from her old Kentucky home to Prussia.

When you breed horses for sale, breed only the best, and you can always sell them. A California man has patented a new wagon tongue support. Two plates are bolted to the axle, one in front, the other at the back.

A good wash for sore mouth in sucking pigs is made as follows: One ounce of carbolic acid and 2 ounces of glycerin put into a pint of soft water. The mixture may be injected into the pig's mouth by means of a small sprayer, or even a little spring bottomed oil can, such as usually accompanies sewing machines.

Those who want to make money out of horse shows should do all they can at it while the fad lasts. It is bound to go out of fashion, like every other fad. Every fad goes out as soon as the "common people" begin to take it up.

A man of much experience in horse exhibitions says that all veterinary examinations of horses at shows should be made outside of the ring and before the animals are brought to the public eye. All that are unsound should be ruled out. This would save much time.

Gluten meal mixed with bran is excellent food for dairy cows. Mixed with cornmeal it is good for pigs.

When you can avoid it, do not let

Harness get wet in the rain or under a shower. Harness is hardened quite as much as shoes are by being wet. Keep harness clean. Never let a collar get foul and clean. Perspiration, dust and hair. A stiff by perspiration, dust and hair. A sore shoulder will be the result if you do. Keep harness soft and pliable by frequent oiling.

Horse beef is darker in color than cow beef, and the fat is yellower.

For Free Cuba.

In the Forum Clarence King publishes a ringing, passionate plea for the recognition of the republic of Cuba by the United States. He recounts at length the record of Spanish greed and oppression in Cuba. Four centuries ago, when Spain took Cuba from the gentle, manly Siboney Indians, and then tried to convert them to Christianity, their chief, Hatuei, said, "If there are Spaniards in heaven, I prefer to go to hell."

Mr. King believes the habit of despoliation and cruelty has in the course of centuries become so ingrained in the Spanish blood that Spain naturally turned the old slave driving, robber methods even against her own loyal subjects in Cuba. The governor general wielded absolute power. When in 1838 the Spanish crown was forced to accept a written constitution, Cuba and the Spanish West Indies were exempted. Today no Cuban delegate can sit in the Spanish cortes, even without a vote.

When the South American countries rebelled against Spain, Cuba refused to follow. She was loyal to Spain, and got the name of the "ever faithful." But the ever faithful has been used only to have revenue squeezed out of her. The tariff imposed on Cuba has been planned with diabolic ingenuity to enrich the Spanish merchant at the expense of Cuban trade.

At present Cuba has a population of 1,600,000. At the beginning of the American Revolution the population of the 13 colonies was only about 2,500,000, and they were as poor as the Cuban insurgents are now. As to the plain course before the United States Mr. King says: "The Cuban war hangs before us as an issue which we cannot evade. Either we must stand as the friend of Spain and, by our thorough prevention of the shipment of war supplies to the insurgents, aid and countenance the Spanish efforts to conquer Cuba into continued sorrow, or we must befriended Cuba in her heroic battle to throw off a mediæval yoke. Let us not deceive ourselves. Spain alone cannot conquer Cuba. She proved that in ten years of misadventure. If we prevent the sending of munitions to Cuba and continue to allow Spain to buy ships and arms and ammunition here, it is we who will conquer Cuba, not Spain. It is we who will crush liberty!"

There are fifteen threshing machines in the township of Innisfil—one for each concession with one in reserve in case of accident.

—A down trodden western newspaper says its delinquent subscribers are meaner than dirt because dirt is nothing more than dust and dust settles.

—Physician (with ear to patients chest) —There is a curious swelling over the heart which must be reduced at once. Patient (anxiously)—That is my pocket-book, doctor. Please don't reduce it too much.

—Provincial Librarian W.T.R. Preston, at one time liberal organizer, has been summoned to appear before Chief Justice Meredith at the Insuing Kingston assizes to answer to a charge of paying money to assist in bribery and corruption at the recent election in that city. Mr. Preston denies the charge in toto.

—Don't expect your teacher to be an angel, for very few are yet having wings; don't imagine your own boy or girl to be a little better than your neighbor's, for they are all made of clay; don't condemn the teacher if one of your kids should be introduced to Prof. Beech or Birch, for you will only cut your own nose off to spite your face; don't neglect, as you have in the past, to visit the school frequently, and bear in mind that teachers are not animals and can appreciate courtesy and kindness.

—The Swamp of Death on the seventh concession of Blenheim, where Birchall murdered Bcnwell, is still visited by large numbers on Sunday. The scene of the murder has been cleared for a space of five or six rods square, and almost every available stick has been carried off as a memento. Benwells grave at Princeton Cemetery is also still a place of interest, some senseless miscreants have been defacing the stone by picking out the letters, which are sunk in the marble.

—If you are proffered an American gold piece of the \$20 denomination these days, it will be well to examine it carefully before giving any equivalent for it. A very clever counterfeit is being freely passed on unsuspecting people all over the province. Business men in Toronto have been victimized, and a despatch from Hamilton tells of a counterfeiters' workshop. Their scheme is very clever. The sides of a genuine gold coin are thinly shaved off and affixed to a quarter or big cent. Then the combination is couched up with gold, and a very good counterfeit is secured. The cost of producing the spurious currency is about \$4 for each piece, so that the "queer" pushers have a clear profit of about \$15. The coins rings true until they begin to crack, then the deception is discovered.

—Boarding house keepers want to be on the lookout for a man 5 feet 10 inches in height, rather slim, dark complexion, clean shaven, dressed in a blue suit, black hat, talked very fast and chews his words.

A Canadian Romance. Information has been received of the final judgment in one of the most important lawsuits ever taken place in Canada. Col. Alexander Fraser, a magnate of the old North West Fur Company of Canada, who died in 1836, settled in 1788 in the North-West with a beautiful Indian girl named Angelique Meadows, to whom he owed his life at the time of an Indian massacre, when he was condemned to torture and death by a party of Angelique's tribe. She saved his life by extending to him her hand.

Fraser promptly accepted the proffered terms and suit, and, according to the practices of Angelique's kinsfolk, became her recognized husband by taking her with him to his own home. After living with his Indian wife for some time in the North-West, he returned in 1801 to Canada, and acquired the now very valuable seigniories of Temiscouata and Madawaska. Angelique followed him to Quebec in 1803, and with her children lived with him for some time in Rivière de Loup, first in the manor house which he himself occupied, and later in a small lodge at some distance therefrom, built in Indian fashion especially for her accommodation, and infinitely preferred by her to the more luxurious home of her white husband.

The suit recently determined was begun many years ago by one Beaulieu, of Rivière de Loup, a great-grandson of Col. Fraser by his Indian wife. He claimed a large share of the valuable properties belonging to his ancestor, and he rested his claim upon the legitimacy of the marriage of his grandfather with Angelique Meadows. The claimant produced a number of witnesses who had known the late Col. Fraser, and who had frequently, as children, heard him describe the rude Indian ceremonies which attended his marriage in the North-West. The defendants contested the legality of the marriage, urging that even if it had been celebrated in the customary Indian manner, which they denied, it was only a forced alliance so far as Fraser was concerned, and undertaken for the sole purpose of saving his life. The case has gone through all the courts of the realm open to it. The final judgment recognizes the claim of Beaulieu, and the legitimacy of Col. Fraser's marriage. So long has the case been in litigation, and so many eminent lawyers have been engaged in it, that in late years difficulty was sometimes experienced in finding judges to sit upon it, as lawyers, had not been retained at an earlier period by some of the parties.

Little Local Lines.

—Boarding house keepers want to be on the lookout for a man 5 feet 10 inches in height, rather slim, dark complexion, clean shaven, dressed in a blue suit, black hat, talked very fast and chews his words.

This man has been obtaining money under false pretence as well as stealing money. His method is to go to a boarding house and states that he has several men for whom he desires to secure board. He finally borrows some money from the boarding house keepers to pay express charges. He pretends to be an employe of a telephone company, and at other times is an agent for various articles.

—Who does not know women and young young girls who are continually in tears? Who always see the dark side? Who have frequently fits of melancholy without any apparent cause? The intelligent physician will know that it is some derangement of the complicated and delicate feminine organs. The young girl suffers, bodily and mentally, in silence. There is undue weariness, unexpected pain, unreasonable tears and fits of temper, Dr. Pierce's Favorite Prescription exerts a wonderful power over woman's delicate organism. It is an invigorating tonic and is specific for the peculiar weaknesses, irregularities and painful derangements of women. Careless easy-going doctors frequently treat their women patients for biliousness, nervousness, dyspepsia, liver or kidney troubles, when the real sickness is in the organs distinctly feminine, and no help can come till they are made perfectly strong by the use of Dr. Pierce's Favorite Prescriptions.

How to Destroy Mosquitoes.

"Insect Life," a late publication from the government printing office at Washington, gives the results of some experiments in New Jersey to obtain relief from mosquitoes. Sprinkling petroleum or kerosene on the surface of ponds in which the mosquitoes breed has been found effective. A film of oil on the surface of the water destroys the larva that are ready to emerge and also any female mosquitoes that may alight to deposit their eggs.

How to Sweeten Linn.

Little bags of powdered orris root are considered among the daintiest devices for perfuming bed linen and underclothes and are more popular than lavender. Orris root can be renewed in strength by the simple device of sunning it well, spreading it out so that the sun will dry it thoroughly.

How to Keep Lemons Fresh.

Lemons may be easily and almost indefinitely preserved under glass. One under an inverted goblet will keep fresh from July to December and as juicy as ever.

An American Girl Violinist.

The mother of Dora Valesca Becker had, as a child, the greatest craving to study the violin, but her wish was never realized, because her father, a wealthy Hungarian merchant, was opposed to the idea of having a girl educated in music. Mrs. Becker was therefore determined, should she be blessed with a daughter, to have her learn the violin. writes Frederic Reddall in 'The Ladies' Home Journal'. So it came about that the little Dora began her studies when only six years of age. She was born in Galveston, her father being conductor of the Galveston Singing society. At the age of 7 she made her debut at the Galveston Opera House. At a second concert, given when she was only 9 years old, she won the hearts of the people in such a manner that they sent her presents of jewelry and a beautiful violin.

Four Spiders to the Pound.

The lizard spider (Melus mygale) is the largest species of venomous spider known. He is of a bright yellow color with three red stripes on his back and a crescent of pure black on the abdomen. Full grown specimens of the lizard spider (so called because their chief food is small lizards, frogs, etc.) measure 4 inches across the back, and have legs 10 inches long. Four full grown males collected by the British exploring expedition weighed one pound four ounces. This giant of the spider family is a native of Ceylon.—St. Louis Republic.

Origin of Bottled Beer.

It is said that the origin of bottled beer in England resulted from Dean Newell leaving a bottle of ale behind him on a fishing excursion. Some days later he found it. He uncorked it "and found," says Fuller, "not a bottle, but a gun, such was the sound of it when opened."—Boston Herald.
