Selecting Fowls at the market.

An experienced eye can tell a young chicken at a glance, for it has several points of distinction from one that is old. If there are spurs and comb, they are small and undeveloped; the legs are bright and soft instead of dull and scaly as when old, and there are practically no pin feathers on a very young chickthe number being in proportion to the age. The young chickens are usually not very fat, and there is more bone in proportion to the meat than on old ones. When a chicken is more than a year old, it is called a fowl and is in prime condition for roasting until it is from 2 to 3 years old.

Corn Fed Pullets.

lavers should not be fed much corn. ket, but for developing pullets it is 1. ang in essential elements. Wheat, oats, sorghum seed, green food of any kind; with liberty to hunt for and capture insects, are the things needed. They require no elaborate bills of fare. Any good sound grain in full rations except corn will do the work effectually. Corn fed pullets will become fat and lazy and will lack in muscular growth, strength and activity.—Texas Farm and Ranch.

How to Make a Pretty Birthday Cake. If you want to make a pretty birthday cake for a child, select some recipe that is not very rich and make a layer cake. For the filling make a frosting colored a bright pink with cranberry juice and put a thick layer of the frosting on the top and around the sides. You can make it still more attractive by putting the date and name of the child on the top layer in white frosting. To do this make : tiny cone of stiff white paper, pin it and fill with frost- son, establishes cattle raising for the kind of pen to do the writing. It makes a pretty spot on the birthday table to set around the cake as many burning wax candles as the child is years old.

How to Keep Eggs Indefinitely.

in a cool, dry cellar.

When eggs are cheap, get a large butter tub and put in a layer of coarse fine salt, as the grocers call it, at the bottom two or three inches deep, then place the eggs, the large er in the salt, being careful not to let other or the sides thickly with salt and

ACTOR ON GANADA.

Jacob Astor Used to Transact Large Part of His Business in Montreal.

John Jacob Astor, the founder of the Astor family of New York, once had an establishment in Montreal. Astor was born in Heidelberg, in 1763. At the age of 16 he set out for London to seek his fortune, from whence, after a residence of four years, he migrated to America. It had been his intention to pursue in the new world the musical instrument business, a knowledge of which he had acquired while employed with his uncle in London; but learning from a fellow passenger, on the way cut, of the fortunes to be made in the fur trade, the bent of his busiress pursuits was changed. Settling in New York-which at that time, 1783, was in a state of deep financial de-Pression, caused by the seven years war of independence, just brought to a close-Astor, that he might the more surely gain a knowledge of his chosen business, hired to a Quaker fur trader for the small wages of \$3 per week, retaining the right to dispose of the small stock of musical instruments that he had brought out with him. It was not long before the energetic young German set up for himself. This was, indeed, in a small way, for he traveled through the country bear ing his pack on his back. To him the wilds of central and western New York, the haunt of fur-bearing ani mals, was a source of untold wealth, which he soon serned to great profit. But his energy was such that he soon extended his operations into the greater wealth producing wilds of the frozen north and the pathless west. This bringing him into competition with the more extensive Canadian trade, so long centred in Montreal, he determined to "carry the war into Africa," and attack the Canadian fur lords in their stronghold. With this end in view he established a branch in Montreal for purchasing direct from the Indians and trappers. According to law he was not allowed to ship his stock to hie headquarters at New York. All shipments from the colonies had to be sent direct to Great Britain. therefore leased from Frobishire the warehouse on Vaudreuil street where his winter's purchases were stored until they could be shipped by the first vessel sailing to London. Astor came regularly to Montreal to look after his Canadian trade, often stopping a month at a time. While accumulating wealth fast he was still thrifty, for he gave the hotel the go-by and lived in his warehouse, occupying the formed by turning the gateway into a window. The outward appearance of the Astor warehouse has remained almost unchanged since the days when in it he competed for the Canadian fur trade with the all-powerful Hudson Bay Company. About the beginning of the century the colonial shipping laws were relaxed and colonists cauld enter into direct foreign trade. Thus Astor, finding little further need for keeping up his Canadian branch, closed up and conducted his western tusiness wholly from New York.

GILBERT PARKER.

He Has Captured the Ear of the Great Metropolis of Britain.

Gilbert Parker, the Canadian novel ist, was entertained at Quebec on the occasion of his visit there. Mr. J. M Lemoine, speaking of Mr. Parker, said: More than once it has been the privilege of Canadians to meet in order to pay honor to a compatriot who had won his spurs on Canadian soil. This evening we meet to join hands and en, while an old fowl has a great many, say godspeed to one of us who has achieved distinction in a far more laid hold of the murderous virus of arduous race beyond the sea-one who has met face to face that censorious, critical British public, one who has stood without awe in presence of that deep prejudice, shall I say the word, that rooted hostility, until of late years, to literary labor bearing the colonial stamp. Mr. Parker, a colonist, has asserted himself fearlesly, successfully, in the very citadel of British During pullets intended for winter thought. In the length and breadth of the British Empire his name now is grand food for fattening fowls for one to conjure with. You know he has captured the ear, won the good will of the great metropolis of Britain, as well as the admiration of the other younger branch of the English race on this side of the Atlantic. Until lately, among many gifted colonists, one specially, as our literary ambassador abroad, represented Canada, the gifted, versatile Grant Allen, a Kingston boy once, now a renowned hovelist of urally caused anxiety among his col-London. Toronto now has sent forth, second ambassador to represent abroad | the proposal of the president. the charm of Canadian life, its manyour most cordial greeting, and ask you with brimming glasses to drink pride, Gilbert Parker."

On the Cattle Ranches. The fact that nearly 20,000 fat cattle averaging \$40 a head have been shipped from the western ranges this sea-

ing; then let it run in a thin stream old country markets as the leading infrom the small end, which you use as a dustry of the territories. Compared with grain growing or any other branch of farming, cattle ranching stands out pre-eminently as the safest, easiest and most profitable thing that a man in this country can turn his hand to. There is in fact no occupation or industry in Canada that to the industrious man of small capital offers

such advantages. The 4,000 head of stockers that have been shipped in from the east this formed; they exhibited no fever, nor season furnish an indication of the eggs touch each possibilities open to the rancher. Two he tub. Cover year old stockers were laid down in paired. No wonder that "breeders of Calgary this fall at \$23 to \$25 a head. another layer Many of these were sold in small lots the tub is full, to men with bands of 25, 50 or a hun- 1881 close upon 34,000 animals had been leaving space at to, ... add a good, dred or two head. These eastern catthick layer of salt; then cover and put the being unaccustomed to wintering 1883 to nearly 500,000.-November Reout will have to be fed during

lars a head, but next season they will be in shape to be sold as three-yearolds at \$40 each. Yearlings can be bought for \$16 to \$17 now, and after running on the range for a couple of years can be cashed at \$40 each; and all this, be it noted is done by the grass of Southern Alberta, which for its remarkable fattening properties in both winter and summer is peculiar to this section of the northwest .- Cal-

MANX SUPERSTITIONS.

Peculiar Ideas Entertained by the Natives as to Witches and Witchcrait.

It is curious that in the Isle of Man the term butch or witch is applied to either sex. As a proof of this we may mention that a writer in the Mona's Herald newspaper of January 24, 1844, in commenting on a famous witchcraft case which had recently been adjudicated upon, remarked: "According to popular belief if the witch swears he has not done it, and does not wish to do it, he cannot witch again." Another curious and novel idea is that it was supposed to be possible to manufacture a witch. The method of doing so was given to our informant by an old man about the year 1875, who said that he had it from the victim herself, then an old woman. An old woman had practised witchcraft and charms during a greater part of her life had grown very feeble, and so, being wishtul to endow her daughter similar powers, made her go through the following performance: "A white sheet was laid on the floor, and beside it was placed a tub of clean water. The girl was made to undress and go into the water, and, after thoroughly washing herself, to get out and wrap herself in the sheet. While she stood in the sheet she had to repeat after her mother a number of words, the exact nature of which, as she was in an abject state of terror, she had forgotten, only remembering that their general purport was that she swore to give up all belief in the Almighty's power, and to trust in that of the Evil One instead. The old woman died soon afterwards, but the girl made no attempt to practise the attributes with which she was supposed to have been endowed." If cattle were supposed to have been bewitched, it was customary, till quite recently, to burn one of the herd, usually a calf, both for the protection of the others and to detect the bewitcher. For it was supposed that while the animal was being burned he would be certain to appear on the spot, and if he could not get the animal's heart into his possession he lost his power in the future. It was believed that if cattle which died of disease were buried one would be lost for each one so treated. Dust was also efficacious in such cases. Thus, Train remarked that "if a person support have the evil eve passed by a herd of cattle, and one of them were taken suddenly ill, the owner of the cattle dust from his shoes, if possible, or, if not, from the ground he had just trodden, and apply it to the sick heast without anyone endowed with the evil eye having passed near it, it would probably be cured by the dust from the threshold of a person close by who was notoriously a possessor of the evil eye."-The Antiquary.

PASTEUR'S BOLD EXPERIMENT.

His Demonstration With the Splenic Fever Virus a Memorable Triumph of Genius in Science.

become an open one to Pasteur. He Court House and Gaol yards, Lindsay, Wood to be delivered not later than 1st July next, in lots of net splenic fever and succeeded in rendering it not only harmless to life, but a sure protection against virus in its more concentrated form. No man. 'n my opinion, can work at these subjects so rapidly as Pasteur without falling into errors of detail. But this may occur while his main position remains impregnable. Such a result, for example, as that obtained in the presence of so many witnesses at Melun must remain an ever memorable conquest of science. Having prepared his | attenuated virus, and proved by laboratory experiments its efficacy as a protective vaccine, Pasteur accepted an invitation at Melun from the president of the Society of Agriculture to make a public experiment on what might be called an agricultural scale. This act of Pasteur's is, perhaps, the boldest thing recorded in the book. It natleagues of the Academy, who feared in her gifted son, Gilbert Parker, a that he had been rash in closing with

Fourteen days cows, vaccinated and unvaccinated. were innoculated with a very virulent virus; and three days subsequent more than two hundred persons assembled to witness the result. The "shout of admiration," mentioned by M. Radot. was a natural outburst under the circumstances. Of 25 sheep which had not been protected by vaccination, 21 were already dead, and the remaining four were dying. The 25 vaccinated sheep, on the contrary, were "in full health Cutput of Factory last year over 63,000 pounds and galety." In the unvaccinated cows intense fever was produced, while the prostration was so great that they were unable to eat. Tumors were also formed at the points of inoculation. In the vaccmated cows no tumors were even an elevation of temperature, Sealed Tenders will be received by the undersigned while the power of feeding was unimcattle overwhelmed Pasteur with ap-

view of Deviews

Fresh air, plenty of sleep, good digestion, mental tranquillity, proper clothing and social diversions are requisite agents in securing roundness of contour. The value of water can hardly be es-

timated. Become a hard drinker if you wish to get fat. Take a drink of water on rising. This rinses out the stomach. If constipated, add a pinch of salt. Cocoa, nalk and an average amount

of coffee are all right. Eat something every night before retiring. Take a nap every day. Avoid irritating subjects. Bones and a bad temper are almost synonymous. Go to bed early and only rise when you feel that you have slept enough. Let meat occupy a secondary place in your diet. Take frequent warm baths. If you do not care for vegetables, cultivate a taste for them. In fact, live to extract all the sweets of life, and you will find yourself on the road to success.

How to Use Newspapers In Sweeping. For sweeping a room neatly there is nothing like newspaper aid. Take a page of newspaper at a time, wet it in hot water and squeeze it until it ceases to drip. Tear into small pieces, or the size of your hand and cast them all over the carpet. Then sweep, and most of the dust in the room will be gathered into the paper. On matting use larger pieces of paper, pushing them ahead of the broom to take up any fluff there may be before beginning the regular sweeping.

How to Make Soda Water.

Soda water goes by that name because soda used to be employed in its manufacture. Nowadays marble dust is used instead. The substance is placed in a metal tank of great strength, into which sulphuric acid drips drop by drop. Marble dust is a compound of lime and carbonic acid. The action of the sulphuric acid liberates the carbonic acid from the lime in the shape of gas. The carbonic acid gas makes its way out of the tank and is passed through water to purify it. Finally it is forced into ten gallon receptacles containing water. This is done under great pressure, the receptacles being continually agitated meanwhile on a sort of cradle so as to enable the water to take up as much of the gas as possible.
