### HOW TO ACT IN A RAILROAD WRECK.

What should one do when a train runs off the track? Fall on the floor and grasp the frame of the seat? Few would be apt to act thus, and yet it is the proper and safe mode of procedure, we are told by a correspondent of Railway and Locomotive Engineering. Above all things says our mentor, do not stand up and scream! Most passengers leap to their feet and do not hold on to anything; consequently they are tossed about like peas in a bag, with what results may be imagined. The writer begins by narrating an experience of his own when the train left the rails. He says:

### FARM IMPLEMENT DUTY.

The farmers of the west are demanding the abolition of duties on agricultural machinery, and tools—the implements peculiar to their business, as well as a lowering of the duties on the necessities of farm life. They are paying a duty of 2 1/2 per cent. on their machinery—the lowest duty of the tariff on any great staple commodity. If the duty on such a staple commodity is

### lowered, why should not the articles, the lumbermen, the miners, be entitled to decreased duties on their implements for work?

If the farmers are admitted to this preferential treatment, to special "privileges" as a class, is it not an injustice to all other workmen to maintain higher duties on their implements and on their necessities of life? If all are admitted to the "special privilege" class, what of the revenue?

Canada is a protectionist country. It could not be otherwise, and continue prosperous. It is an eminent goods will be manufactured WHERE THEY CAN BE PRODUCED MOST ECONOMICALLY. If goods can be produced in the United States more cheaply than in Canada, that is where the manufacturer will locate, unless there is some barrier, some method of equalizing the costs in two countries. This is the primary reason for the Canadian tariff—not only as a means of revenue but to force the manufacture in Canada of all articles which can be reasonably and profitably produced here.

It is undoubtedly true that many articles equal in quality, produced both in Canada and the United States, bear a lower cost across the border. Contributing causes to this might be cheaper material—in some lines—a bigger output, a market ten times larger than we possess, specialization. With a lower cost, the United States manufacturers, put on an equal basis with Canadian manufacturers, would force the closing of the smaller Canadian industries. The tariff is the differential, the means by which Canada preserved her industrial independence and integrity!

The lower the tariff the closer the precipice. We are not arguing that Canadian industries should receive more protection than is necessary to maintain Canadian industries on a reasonable profit basis. The consumer has to be considered, but inasmuch as the consumer is dependent on the country's commercial prosperity for a living, it is the best of policy for the consumer's sake to do nothing to imperil that pleasant condition.—Peterboro Review.

### A GROWING HOME INSTITUTION.

A few months ago The Victoria Loan & Savings Company offered for subscription, \$100,000 of additional stock at a premium of \$20.00 per share. Subscriptions could be made at any time up to the 31st of December,

### 1910. On the 30th of December the full amount had been subscribed, and about \$84,000 had been received thereon in cash. This was all done without the payment of a cent of commission or any expenditure other than the postage on incidental correspondence.

The Victoria Loan and Savings Company has perhaps as much money as a half dozen of the smaller bank agencies throughout the country. All this is handled by a manager an assistant manager, and a stenographer at a minimum of expense, consequently the splendid results to the shareholders.  
The shareholders of the company for the last three years between dividend received and the increase in value of their stock, have realized more than 10 per cent per annum. It is expected that this result will be exceeded in the future; the basis of this expectation being that the company is able to make as good returns on its investments as other financial institutions, and at the same time at an expense charge far below the average.

The subscriptions for stock received were largely from the county of Victoria, but subscriptions were received to a considerable extent from the city of Toronto, also from Windsor, Orangeville, Oshawa, Port Hope, Coburne, Belleville, Port Perry and many other places, and a subscription was also received from Professor of Political Economy in the State University of Minnesota; also one from a millionaire manufacturer of Glasgow, Scotland.

The readiness with which this stock was taken up is a great compliment to the directors and officers of the company and to the company itself. As compared with the stock of other financial institutions, the stock is still exceedingly cheap at the price sold, and we are informed that the company expect by the year 1912 to increase the capital stock to half a million dollars and to issue the latter portion of the same at probably \$140.00 per share.  
The whole history of this company shows how wise people are to invest their money in home institutions, where they know the president, the directors, the manager and all the officers, and know them to be men of character and responsibility.

Over \$11,000 is now available for a nurse's home in connection with the John H. Stratford Hospital at Brantford.
