From the Official Returns to the Bureau of Industries.

Summary From Reports of Over 3,000 Correspondents Indicates Prosperity For Farmers of the Banner Prevince-The Grain Crops Better Than at First Anticipated-Average of 25 Bushels Per Acre of Fall Wheat.

Toronto, Aug. 19 .- The following report concerning the crops of the Province has been issued by the Ontario Department of Agriculture, and deals with conditions as described by regular correspondents of the Bureau of Industries under date of the 1st of August. It is based on the returns of over 2,000 correspondents: Fall Wheat.

Much of the fall wheat just harvested was sown a week or two later than usual, owing to the rainy weather prevailing in the early part of have had any bad effect upon the general character of the crop. There was but little injury by winter-killing, and very little was plowed up in the spring. April was not favorable to the growth of the young wheat, but during the summer the crop picked up to such an extent that it turned out to be one of the best crops yet recorded in the Province, both as to yield and quality. While some returns fall short of an average, several instances are given where the crop range from 40 to 50 bushels per acre, and samples are reported going fully 63 pounds to the bushel. Much of the straw is shorter than usual, but bright. Owing to heavy rains in July some of the wheat lodged and sprouted, but not in sufficient proportion to be a serious drawback. The Hessian fly was reported in several counties, but only to a slight extent compared with recent years. The injury from other insects, and from rust and smut, has been but trifling, and this may also be said of the grain crops. A few complaints have been made of depredations of sparrows in wheat and other cereals. The cutting of fall wheat ranged from the 10th to the 30th of July, according to locality. although at the later date the greater part of the crop was in the barn. spring Wheat.

The harvesting of all spring grains this year is about a week or so later than usual, and the cutting of spring wheat was expected during the first and second weeks of August. Like fall wheat, the crop suffered from drouth in the spring, but pulled up with the more favorable weather prevailing later. While rather thin on the ground in places, the heads are well filled, the grain is plump, the average yield will be a fairly large one. There was but slight injury from insect or other pests.

Barley. A large acreage and a big yield fairly describes this crop. Cutting began about the 20th July, and was expected to run a week into August. While some barley had lodged and was discolored by rain, the bulk the crop is of the choicest quality, both in color and weight, while the average vield is one of the most generous yet reported. Most of the barley grown in Ontario is now fed to live stock on the farm, being substituted largely for peas since the latter crop has been suffering from the weevil. There was but little injury to the crop from any other source but rain.

While a few correspondents writing on the 1st of August reported the nips have done much better, and procutting of oats, most of the crop mise to be a large crop. Hardly any had yet to ripen, and harvesting was mention was made of carrots, and likely to continue for a couple of reference to sugar beets were to the and the quality of the grain good. ward, and hardly up to the average As in the case of fall wheat and bar- for the time of year. However, all ley, some individual yields will be classes of roots have still a considerimmense. The straw is comparative- able period before them in which to ly short, but otherwise of fair qual- make further growth. ity, but there has been considerable lodging owing to heavy rains during the past week or two. Rust and smut are complained of in a few localities, but only to a slight extent even

Comparatively little rye is now raised for the grain, much of that which is sown being either cut green or plowed under. The crop has been a most uneven one this season, both as to yield and quality. The season of harvesting rye ranged from the middle to the end of July.

the fact that for the past two or a few correspondents speak well been largely substituted for the comyet too frequent concerning the preif peas have been comparatively successful where grown, some correspondents, indeed, being quite enthusiastic over the prospects of the crop. There has also been a great growth of straw owing to frequent rains. but some mildew is reported. Some early fancy peas have been already cut, but ordinary field peas were not expected to be harvested for a week or two. While the acreage of peas is still small compared with that of a few years ago, the general outlook for the crop is more encouraging than for the past two years.

The growing of field beans is confined mainly to Kent and adjacent counties in the Lake Erie district. There has been a great growth of ingly good trim, having suffered from stalk, the plants have blossomed little but the horn fly, which, howprofusely, and the prospects at pre- ever, appeared later in the sent are most favorable for a more than usual. The flow of milk has arose to address the congress. He his 87th year. He was for 59 years than average yield when the crop is been large, and there will be a large was greeted with a whirlwind of apgathered in the first or second week supply of dairy products. Farmers plause. of September. In many instances supplying cheese factories appear to Lord Strathcona referred to the Belfast, Ireland, and came to Canada beans were planted late, but aside be more satisfied with results this progress which had made the discus- when quite young.

April was too cold and dry for clover, and this, together with the drouth which prevailed in May, gave the crop a very poor start. Rains in the latter part of June and in the early portion of July, however, brought most meadows along in remarkably good form, with the result that the yield of hay will be about an average, although individual returns will range from # to tons per acre. Timothy has done much better than clover this year, and new meadows, as a rule, have been much ahead of old fields. The weather was very "catchy" during haying, and a part of the crop was caught by rain; nevertheless there has been a much larger proportion of first-class hay saved than was the case last season. Some of the hay had to be cut late on account of the scarcity of farm labor and the coming in of the fall Wheat harvest, although the use of hay-loaders and other special appliances helped many farmers out. A few correspondents speak of lucerne as increasing in favor. Clover cutting began about the last fall, but this does not seem to 4th of June, and timothy was a week or two later.

This appears to be a very uneven crop this year. It was so dry at the time of planting that much of the seed failed to germinate, which made considerable replanting necessary. A number of correspondents also complain of the poor quality of the seed apart from weather conditions. Crows and blackbirds were unusually troublesome when the plants had just sprouted, and cold, wet weather later on told against the growth of the crop. Notwithstanding all these drawbacks many correspondents are of opinion that with favorable weather during the remainder of the season a fair yield will be recorded. Fodder corns were considered to be in a relatively better condition than those varieties raised for grain.

Tobacco. Most of the tobacco raised in the Province is grown in the counties of Essex and Kent in the west, and in Prescott and Russell in the east. Correspondents do not report very fully concerning this crop, but western returns were to the effect that it was rather backward owing to the late planting and cold, wet weather, although otherwise looking well. The reports from eastern Ontario were rather more favorable as to general condition, but it was stated that some replanting had to be done on account of drouth. The interest in tobacco growing appears to be less than during the past two or three

Potatoes. As correspondents wrote on the 1st of August potatoes promised to be of the best yields for years, more or less favorable accounts coming from nearly every county in the Province. The only fear expressed was that should the rainy weather continue, there would be danger of a loss from rot. At the time of writing, however, only a few cases of rot were reported, and these appeared to be of a local character. A number of the returns spoke of bugs as being very plentiful, doubtless owing to the frequent rains washing off the applications of Paris green.

Reports concerning mangels vary very much, for while some of the returns speak of the crop as being in good condition, a large number describe it as thin and natchy in places, owing to the dry weather which prevailed at seeding interfering with germination. In various parts of the Province some of the mangels had to be plowed up. weeks yet. The yield will be large, effect that the crop was rather back-

Taking the western half of the Pro-

vince as a whole, apples are not up to the average, either in yield or quality, but most of the reports from counties extending from York to Grenville speak favorably of this fruit in both respects. Some correspondents claim that the greatest injury was from frost during the period of blossom. Winter apples will be relatively scarcer that the earlier sorts. Considerable scab has been reported where the trees were not sprayed, but complaints have been less than usual concerning wormy It is difficult to sum up the exact fruit. Blight among apple trees is situation regarding peas, owing to reported in several districts. While three years the flat or grass pea has the prospects for pears, most of the returns do not favor a large, or even mon round field pea on account of an average yield. Plums, however, the depredations of the pea weevil or have had a most favorable season for "bug," and that this year a number bearing, and where sprayed have of farmers have returned to the lat- yielded generously, but where neglectter variety. While complaints are ed much injury was wrought by the curculio causing young fruit to drop sence of the weevil, it would seem as from the tree. A few complaints have also been received of plums rotting. In most quarters where grown, peaches are vielding well. more especially the later varieties. Cherries give from a fair to a light yield, and, like plums, have suffered somewhat from black-rot. Grapes will be a medium crop should favorable weather continue until ripening. Strawberries, raspberries, and other small fruits have been more or less abundant.

P stures and Live Stock. The early part of the season was most unpromising for pastures, being so dry and cold, but frequent rains later on brought meadows into the very best condition, generally speaking. Live stock are in correspond-

There is every prospect of an abundance of all kinds of fodder for fall and winter keep.

Bees and Heney. The season has been a favorable one for the apiary. Bees swarmed freely, and there has been an dance of nectar in both field forest, more especially in the case of white clover, which was more or less in bloom all summer. The yields reported range from 25 to 100 pounds per colony, but the average for the Province will be about 55 pounds, spring count. Little or no disease has been reported among bees, and at last accounts they were said to be in a thrifty condition.

Farm Labor and Wages. Full crops and the migration of farmers' sons to New Ontario and to Manitoba and the Northwest, created a demand for farm laborers Ontario that could not be met during the rush of summer operations. Several correspondents refer to the influx of British immigrants as having relieved the situation to some extent; for while a number of these, having had no previous experience in agricultural work, were a sore disappointment, many of them have given good satisfaction. Wages during harvesting ranged from \$1.25 to \$2 a day according to locality, the skill of the worker, and the urgency of the demand for help, the average rate being about \$1.50 with board. Monthly wages ran all the way from \$20 to \$40, and in a few cases as high as \$45, the prevailing quotations being from \$25 to \$30, with board While many farmers were undoubtedly hard pushed for a while during harvest, the plan of interchanging labor proved to be of great assistance o in some cases, and improved machinery is also mentioned as having been of much help in meeting the rush of work. On account of the scarcity and comparatively price of labor, a number of farmers are considerably behind in their work, and others have had to let intended building improvements lie over from the same cause.

Field Crop Ferecast. The following table gives the area and estimated yields of the principal crops in Ontario for the year 1903. The forecast of August 1st is based on returns from 2,000 special correspondents:

Acreage. Bushels, per acre 16,969,634 25.5 Spring 252.85 Wheat 709.839 2,978,641 16.6 seas." 179,277 Rye .. . 9,179 345 22.0 407,133 Peas ... 984,477 18.2 53,973

Tons. Hay-Clover ... 2,783,565 5,191,828 1.86 The fall wheat plowed up was 5,-496 acres, against 8,986 in 1902 and 75,473 in 1901.

Meet in Montreal and Discuss Many Topics of Importance.

THE DEFENCE OF THE EMPIRE

Principle of Colonial Contributions Is Endorsed-Resolutions re. the Food Supply of the Empire Adopted-Brilliant Galaxy of Delegates From Chambers of Com-

merce of Empire. Montreal, Aug. 18 .- It was a brilprinces of trade from every section of the Empire were there. It was the most representative gathering of in the policy of tariff reform which I commercial spirits ever witnessed in the Dominion, and a ravishing bit of color was contributed by the gallery of ladies. The United Kingdom, Australia, South Africa, India, the West Indies, New Zealand and Canada were there in the person of her most progressive merchants.

Upon Lord Strathcona's left sat Lord Brassey, president of the congress, the representative of a family whose name has been identified with some of Canada's big enterprises of half a century ago. Adjoining was Lieut.-Gen. F. Winburn Laurie, C.B. M.P., of the London Chamber, a Canadian, who has so long resided in London as to desire to see the colonial Empire ruled by Downing street.

Feast For the Eye.

Spreading out from beneath the shield and royal standard, beneath which they stood gathered the delegates, all occupying numbered chairs, Would you have an occular demonstration of the world wide stretch of the British Empire? Then feast your mind's eye upon the spectacle of Sir Edward Buck, the genius of far-off Cawnpore, rubbing elbows with the venerable Hon. W. Ross of Halifax. Prof. W. R. Leng of London, sandwiched in between delegates from Durban, Kimberley and other South African cities; Willis Raymond New Zealand seated in the same seat with the commercial bodies from the West Indies; the South Australian visitors crowding into the square devoted to the citizens of the Empire from Alexandria and other sections of the far removed Egypt; or the merchants of Victoria and Vancouver contending for a little more with the commercial bodies from New South Wales, Queensland and Barbadoes. Nothing could strikingly illustrate the world force of the British Empire.

Lord Strathcons.

that Lord Strathcona viewed as he Ontario street, of Chas. McCurry, in

from the effects of heavy rains in year than those in the butter line. sion of Imperial preferential trade. He said the proposal might involve

some rearrangement of the fiscal policy of the United Kingdom, but he did not think it would necessitate any return to protection or result in the burden on the shoulders of fellow-citizens of Britain being increased to any appreciable extent, if at all it would not be protection in the way in which it was usually interpreted, but duties on a limited number of articles from countries outside the Empire.

Lord Brassey. Lord Brassey, who followed, said there was one prime object for them all-that was to strengthen and consolidate the Empire. Lord Brassey is a finished speaker and knows how to secure the best effect. He is tall, grey-bearded and of ruddy complexion. With the idea of saving time, the subjects from one to sixteen were referred to a committee, to be acted on to-day, with the hope of eliminating minor resolutions. Imperial Defence.

The discussion which followed was on Imperial defence. Geo. E. Drummond of Montreal moved two resolutions, introduced by the Canadian Manufacturers' Association and the Montreal Board of Trade, favoring colonial contributions to Imperial de-

After some discussion Col. Denison, moved an amendment embodying the principle of the Montreal Board of Trade's resolution and that of the Montreal District Chambre De Commerce, which he said was an emblem of the unity of the two races as fol-

"It is resolved that this Congress hereby approve the principle that it hereby approve the principle that it | is the duty of the self-governing colonles to participate in the cost of the defence of the Empire. The col-

onies thus claim the privilege of keeping their own initiative as to the nature and mode of help which they Regular prices 20c and 18c, may agree to offer in the future to offer the British Empire." The passing of this resolution was

greeted with enthusiasm. Britain's Food.

Lieut.-Col. Denison and J. W. Woods of Toronto, moved that "In the opinion of this congress the food supply of Great Britain can be most safely relied upon by developing the output of her own territories to such Yield an extent as to make her independent of supplies from foreign sources, and to best achieve this end it is more desirable and necessary to divert as far as possible all of her 4,862,711 19.2 able-bodied surplus population who 24,203,870 34.1 will make useful citizens to the Oats ... 2,645,965 110,125,099 41.6 shores of her dominions across the The resolution was adopted.

Other Besolutions.

The resolution touching the importation of coolie labor from India was withdrawn without comment. The motion to urge the Imperial Government to request the French surtax charges to be abolished on shipments passing through French territory was adopted.

The resolution requesting the Imperial Government to grant the most favored nation clause to countries who had extended same to the colonies was passed.

Last night a reception was tendered the visitors at the Board of Trade. The city made the occasion a social event, and several thousand persons were present. Chamberlain's Scheme.

London, Aug. 18.-Colonial Secretary Chamberlain, replying to a request for a short, definite statement of his fiscal proposals, has written as follows:

"I have never suggested any tax whatever on raw materials, such as wool or cotton, and I believe that such a tax would be entirely unneliant assembly that confronted Lord cessary for the purposes I have in Strathcona when he convened the view, namely, for mutual preference fifth congress of the Chambers of with the colonies, and for enabling Commerce yesterday. Six hundred us to bargain for better terms with our foreign competitors.

"As regards food, there is nothing have put before the country that need increase in the slightest degree the cost of living of any family in the country."

CANADA'S TRADE WITH U. S.

It Mas Reached the High Water Mark-Imports and Exports.

Washington, D. C., Aug. 18 .-Trade with Canada in the year just ended reached its high water mark. Both in imports and exports the commerce between the two countries exceeded that in any previous year. Statistics compiled at the Department

of Commerce and Labor show that imports from Canada last year amounted to \$54,660,410 and the exports to Canada \$123,472,416. By Canada is meant British Columbia, Quebec, Ontario Nova Scotia and New Brunswick. About \$38,000,000 of the imports was

from Quebec and Ontario, \$10,000,000 from New Brunswick and Nova Scotia. and \$6,000,000 from British Columbia-Of the exports \$110,000,000 was to Que_ bec and Ontario, \$7,000,000 to New Brunswick and Nova Scotia and \$6,000,-000 to British Columbia.

The imports haver before reached so much as \$50,000,000 save in one exceptional year, 1881, when they barely touched that figure. In 1902 they were \$48,076,124. The exports to Canada never reached so much as \$100,000,000 until 1901, when they were \$1(5,000,000) In 1902 they were \$109,000,000. The Canadian tariff has given to the products and manufactures of the United Kingdom and most of its colonies a ceduction of twelve and a half per centin the tariff rates since April, 1897 twenty-five per cent, from August, 1898 to July 1, 1900, and since that date reduction of thirty-three per cent. It was during that period that the most rapid growth in the exports from the United States to Canada took place. The exports over the year 1897 increased ninety per cent, while the increase in the total exports meantime has been

about forty per cent, With One Firm 59 Years.
