SPICERS OF CEYLON.

Their Golden Webs Will Ensuare

Birds and Lizards.

Far up in the mountains of Ceylon there is a spider that spins a web like bright yellowish silk, the central net of which is five feet in diameter, while the supporting lines or guys, as they are called, measure sometimes ten or twelve feet. The spider seldom bites or stings, but should any one try to catch him bite he will, and, though not venomous, his jaws are as powerful as a bird's beak.

The bodies of these spiders are very handsomely decorated, being bright gold or scarlet underneath, while the upper part is covered with the most delicate slate colored fur.

So strong are the webs that birds the size of larks are frequently caught therein, and even the small but powerful scaly lizard falls a victim. A writer says that he has often sat and watched the yellow monster-measuring, when waiting for his prey, with his legs stretched out, fully six inchesstriding across the middle of the net and noted the rapid manner in which he winds his stout threads round the unfortunate captive. He usually throws the coils about the

head until the wretched victim is first blinded and then choked. In many unfrequented dark nooks of the jungle you come across skeletons of small birds caught in these terrible snares.

ENGRAVED PICTURES.

Their Romantic Origin Dates Back t the Fifteenth Century.

The art of engraved pictures da 's it romantic origin to the chamber of a Florentine goldsmith, Maso Finiguerra, in the fifteenth century, about the time that Gutenberg was struggling with his printing from movable types. Before that day pictures were drawn or painted by hand. Finiguerra was a celebrated worker in metals, and, being commissioned to make a pax of gold engraved with a coronation of the Virgin, he sought to test his design by filling in the lines with a preparation and Eve," "Little Horse," "Melancholia" and "St. Gerome." "Melancholia" is a strange composition of extraordinary originality, and has been a mystery for over four centuries. This bit of yellowed paper, possibly pulled from the plate by Durer's own hands, has lost none of its fascination.

NO SENTIMENT IN SIGHS.

For More Breath.

The sigh, which from time immemorial and by all the poets whoever sung has been regarded as a matter of sentiment and connected with the emotions, is declared by physicians to be as purely a physical phenomenon as is the sneeze or cough. A well known Philadelphia doctor, speaking of this the other day, explained that the sigh is nature's method of making one take a deep breath. When the lungs have been getting insufficient air a sigh is the means by which they are replenished, or when the air has been impure the sigh which one often takes in stepping out into the open air is from the same cause.

The doctor admitted that people sometimes sigh from sorrow or other mental ill, but maintained that this is partly because it has been accepted as the expression of grief through ages as long as kissing and handshaking have been accepted as signs of affection or friendship. Another reason why a sigh follows a sorrowful thought is that such thoughts are often concentrated and intense enough to cause insufficient breathing. When the lungs suffer for a certain time from this insufficiency the sigh follows. Sighs are often caused, too, says the same authority, by certain sorts of indigestion.

An Ancient Recipe.

An ancient recipe for making a sweet perfume for the ladies runs as follows: Take storax, calamite and benjamin. of each half an ounce, laudanum one ounce, musk two grains, and put them together in a fair brass mortar, which you must first warm so hot in the fire that with the heat thereof and beating with a little pestle it may work like wax, which, being thoroughly wrought, you may make it in little cakes or balls and so lay it up.

A Marine Fire Alarm, Many ships have a pipe running from the hold to the deck. It is a precaution against fire. If even a triffing fire occurs in the hold smoke will ascend the pipe and upon issuing from

the top will be noticed by some of the crew. Checking it would then be comparatively easy. In the absence of a pipe, though, a fire might begin and remain unnoticed until it assumed such proportions that conquering it would be almost impossible.

Rivers (stopping to sharpen his pencil)-How do you spell the plural of "dodo?" With or without the "e?" Brooks (who isn't quite sure)-You don't have to spell it. There's no such blamed bird now. It's extinct.

Something better always makes its appearance when the old and wornout things fail .- Andersen.

INSECT ANATOMY.

Wonderful Breathing Apparatus of Wasps and Hornets.

If we take any moderately large insect, say a wasp or a hornet, we can see, even with the naked eye, that a series of small spotlike marks runs along the side of the body. These apparent spots, which are eighteen or wenty in number, are, in fact, the apertures through which air is admitted into the system, and are generally formed in such a manner that no extraneous matter can by any possibility find entrance.

Sometimes they are furnished with a grain. pair of horny lips, which can be opened and closed at the will of the insect; in other cases they are densely fringed with stiff, interlacing bristles, forming a filter which allows air and air alone

But the apparatus, of whatever character it may be, is always so wonderfully perfect in its action that it has been found impossible to injure the body of a dead insect with so subtle a medium as spirits of wine, although the subject was first immersed in the fluid and then placed beneath the receiver of an air pump.

The apertures in question communicate with two large breathing tubes. which extend through the entire length of the body. From these main tubes are given off innumerable branches. which run in all directions and continually divide and subdivide, until a wonderfully intricate network is formed pervading every part of the structure and penetrating even to the antennae.

AN ANCIENT TELEGRAPH.

used by Grecian Generals In the Time of Aristotle.

Telegraphy as a means of conveying information to a distance by means of signals, etc., was used by the Grecian generals in the time of Aristotle. This early mode of telegraphing consisted of two or more earthen vessels, exactly similar in shape and size and filled with water. These vessels were each provided with faucets of exactly the same caliber, so that an equal amount of water could be discharged from each in a given time.

In these vessels several uprights were fixed, each with disks attached. on which were certain letters and sentences. When all was in readiness the party desiring to communicate with another started a signal, which was continued until it was answered by another which signified "go ahead." of oil and lampblack, which threw the When that signal was given both turnpicture into relief. By chance the face | ed the faucets, and the water comwas laid face downward on a piece of menced to escape. friend is so likely to be overworked."

MODES OF THE MOMENT.

Raised ribbon embroidery gives a touch of supreme elegance on silk of

cloth Eton or empire jackets. Gowns of silk gauze striped with satin are often accompanied by little embroidered boleros of taffeta the color of the satin stripe.

Innum able princess or one piece frocks in figured organdie and other forms of muslin appear, lace trimmed and showing insertions.

Quite the newest thing in colored muslins is the gown of plain tint with a flowered border. Very quaint and charming effects may be produced in these softly colored fabrics.

Bright colored silk jackets are a strong fancy of the season, with white cotton or linen gowns. They are accompanied by hats, parasols, girdles or sashes and often shoes and stockings of the same order.

It looks now as if skirts might become as fussified as waists are at present before many months. Long lines have had a strenuous use, and the vogue of the tunic is increasing, not decreasing. Overskirt semblances are very plentiful among smart summerwalking skirts.

I had lost all my longing for tea.

Then I thought of the size of his fee. And if when I should die they would take me to lie In the shade of the old apple tree.

Soon the doctor was looking at me.

Sir Asmilius Irving. The Dean of the Bar of Ontario was Knighted in the King's Birthday. Sir Aemilius is an old man, but he carries his eighty-three years remarkably well. He has been a barrister of Upper Canada since 1849, and as Treasurer of the mouth of Narragansett bay, is said to Law Society has seen two generations pass through Osgoode Hall. For many years Mr. Irving had a place among the counsel in all the big provincial cases, and his services in the matter of accounts in dispute between the Dominion and Ontario have been invaluable He sat for Hamilton in the Commons from 1874 to 1878 as a Liberal. His connection with the Liberal party was by birth as well as inclination. His father, the Hon. Jacob Aemilius Irving. served as an officer of dragoons during the Napoleonic wars, and was present at Waterloo. He came to Canada in 1834, and after the union of 1840 pat in the Legislative Council. He was a

friend and ally of Baldwin and Lafon-

taine, and it was in the atmosphere of

Reform that Aemilius Irving grew up.

Lunar Athletics. The "man in the moon" must surely regard with amused contempt our much waunted athletic records. A good terrestrial athlete could cover about 120 feet on the moon in a running broad jump, while leaping over the barn would be a very commonplace feat. He would find no difficulty in carrying six times as much and running six times as fast as he could on earth, all because the moon attracts bodies with but one-sixth of the force

of the earth.

Vegetable Rennets. Those who would like to make cheese on a very small scale are often trou bled to get proper rennet to produce coagulation of the milk. A scientist says that if the leaves of the common butterwort are placed in a strainer and the milk fresh from the cow is poured over it the milk will soon become thick and has a most delicious flavor. The yellow bedstraw also possesses the properties of curdling milk, and the natives of Cheshire prefer it as a ren net to all other sorts. The leaves and flowers are put in the strainer, and the mlik is slowly poured over them. The

We like best to call SCOTT'S EMULSION

a food because it stands so emphatically for perfect nutrition. And yet in the matter of restoring appetite, of giving new trength to the tissues, especially to the nerves, its action is that of a medicine.
