At this, point Mr. Coulter thought he had seen as much bear as he had any use for, and made tracks for home. Aitogether there were seven, three large old ones, and two pair of cubs. The following night a party went out to look for the game, and Henry Lambert came onto the flock. At least he got sight of one big fellow and raising his rifle let fly. The effect of the report was astonishing. The rushing through the oats sounded like a tornado, and the three cubs went scrambling up trees. Therf there was some banging of fire arms, and the cubs backed down like cats. This was fatal to one, and the others got away. Harry hit his big one all right, and after tracing him a short distance into the woods came upon him dead. Wanting to get another shot at the others, Harry marked the spot in his mind, as he thought, and returned to the field, but he did not get any more shooting and when he returned in the morning was unable to find the bear. The cub weighed about a hundred pounds, and was as fat as butter. The pelt, too, was in good condition. Fully an acre of the gats had been eaten and trampled down by the bears.

LOUSY AND ROTTEN RAGS ARE SENT FROM EUROPE, USED HERE

The Revolting Material that Takes the Place of Wool in Some Cloths

In his letter about the adulteration of woolen goods Mr. Mansell, of England, who has been quoted of late in these columns, reproduces the following from a circular from the

Natural Live Stock Association

"There are several classes of shoddy. The best is made from the sweepings of tailor shops, and the emptyings of ragboxes in civilized countries. The worst, which constitutes the greater part used in America, is from the rotten cast-off-rags of beggars and the lazar and pest houses of Europe, having in them all kinds and amounts of filth and disease. These are gathered by rager, saw the body and was there when what Mr. Bell had said about the pickers from the slums and alleys and they are purchased by a certain class After short deliberation the jury of manufacturers, who, in order to "Do you think he drowned him- returned a verdict of death by drown- take the curse off the name, term the stuff "re used wool fibre." It must be remembered, however, that in most instances, when tearing this order to get two ends so that it may shoddy to pieces, preparatory to again weaving it into cloth, it is found to be so rotten and dead that nothing is produced but dust, and in order to get two ends so that it may be spun, a minimum portion of wool or cotton is mixed with it, in order that it may be held together. The next step after weaving carries it to unscruplous dealers, who sell this production to the labority men, and in fact to all classes of society for "pure wool" thus getting for a suit worth three to four dollars, three times this amount. To encourage such a fraud is simply putting the lousy rags of European paupers in competition with the sheep arti wool growers of America and elsewhere, and robbing the consumers who wear
