natural supply can be supplemented by artificial means. One objection to a cultivated orchard is that the ground is often muddy in apple-picking time. That is true, and has

especial force where such a fine quality of mind is produced as in this district. Another is that there is a danger of the place at the residence of Mr. and roots being damaged. They often are, and in that case Mrs. Henry Samells, Cadmus, Ont., infinitely more harm than good is done. But that is a when their daughter Mary Alberta matter for the common sense and skill of the man who owns the orchard. When sod is being broken up, the first mony. plowing should be shallow, for it will not do to destroy too formed many roots at once. The depth may gradually be increas- Blackstock. ed to its maximum which need not be more than four or of Sonya and Miss Effic Hobbs of five inches. A disc harrow will break an ordinary sod Mr. Norman Philip of Lindsay and W. sufficiently for the first cultivation.

Shall the orchard be plowed? Ask the man with the roots a great protection from frost. In northen regions strains of Mendelsohn's wedding strains of Northead by Mice Northead b big orchard. The answer will depend on whether you ask it must be undistured on that account. Its benefit is twohim on this or the other side of Lake Ontario. During a fold: it protects the roots and for reasons mentioned above led the parlor leaning on the arm of leavest trip through large fruit-growing sections on both countails the growth of the trace. recent trip through large fruit-growing sections on both curtails the growth of the tree so that its new branches her grandfather, Mr. Jno. Miller of her grandfather, Mr. Jno. Miller of her grandfather, Mr. Jno. sides of the lake we noticed that the Canadian and the Yankee hold opposite ideas on that subject. These ideas were comes. South of the lake they care little for the frost. In dressed in pale blue, trimmed with obtained both by observing his practice and listening to mands some caution in going about it. The sod should not mands some caution in going about it. The sod should not mands some caution in going about it. Along our frontier nearly all the orchards are in sod; in be broken in the fall or the sudden exposure of the roots the ceremony all repaired to the din-New York state the most and best of them are carefully to cold will likely prove disastrous. In the spring is the ing-room to partake of a sumptuous cultivated. From a 25-mile journey through almost continuous peach, pear, and apple orchards, we came to judicicious cultivation of the orchard would produce good

# EDITORIAL NOTES

THE WAR horse is the latest addition to the bunch of creasing interest. It will be a wonder if the rapid revolution taking place in modern agriculture does not extend imal adds a much-needed dignity to the Humber hog, the to the orchard. More and better fruit may ripen on this ram Dan and the calf with the cough. It is to be hoped F. Henderson Cambridge-st. was the discussion. In this district scarcely an orchard is cultivat-

On general principles it will be admitted that it is bet Cornwall was 19½-cents per square foot. Another town is assisted by her sister Mable and the ter to cultivate every part of the farm. Any uncultivated getting them for 11 cents. Lindsay had some laid for 91 groom by Mr. Claude Preston. White plot will be a nursery for noxious weeds that cannot be-but they had to be built again next year. Cornwall had silk organdie was the bride's gown and vellow organdie and black trimwholly confined to that space. No doubt many a man better take the 191 cents offer. After all the cheapest walk

It is to be hoped that although the commissioners did ute enemies of animal and plant life are propagated and not grant it at the time, they will not lose sight of Supt. protected in it; but more especially is it the case in winter. Begbie's request for an increase of salary. It is a reason-Then its wilted bulk forms an admirable protection for able, well-founded request. By comparison with the salthese creatures; in it is the hope and fulfilment of their aries paid for other town services, that received by the supresurrection. Beneath its folds the thrifty mouse finds winter quarters and with complacent vigor makes winterrings an expert man in a department requiring special scientifie about the tree trunks. If the orchard is well cultivated he knowledge. His duties extend throughout the entire year, must cofine these winter operations to the trees in the are heaviest when the weather is most severe, and upon their It is a golden rule of modern agriculture that a culti- and success of the town's greatest property. He is not ture. Very likely few orchards in this section escape danger commonplace foremen are getting more money. To no by drought. Growing grass sucks up the moisture that man to whose skill and fidelity is wholly committed the should go to the trees and when the soil is parched the well-being of a \$100,000 plant, would any private corporaheavy sod keeps out the summer showers by which the tion offer the paltry sum that is paid to Mr. Begbie. The trees should be revived. If the ground is cultivated and smallest sort of percentage on the splendid increase in the stirred frequently its surface will be covered with a few plant's earning power under his management, would give inches of mulch that both readily admits and jealously the superintendent a good many times the increase he asks. retains the moisture. Every farmer who attends or reads If on no other basis than the actual extension of the mains about Institute meetings, is familiar with his friend the during the past two years, Mr. Begbie's request should be mulch. Then the soil of the orchard under cultivation can instantly granted by the commissioners. The fact is the be kept in a perfect state of fertility. This will be aided whole matter of remuneration should be gone into by that
