Professor H. H. Dean Prepares a Course On "Dairying"

HERE is a Course of Education that will appeal to every progressive farmer. It is the experience and knowledge of the most successful dairymen in various parts of the world put into such a clear and simple form that it may be readily understood and applied with profit by Canadian farmers.

This course is the crowning achievement of Professor Dean's life—the result of twenty-two years' experience as a teacher, scientist, investigator and practical dairyman. Prof. Dean is one of the most eminent dairy professors in the world, being professor of dairying at Ontario Agricultural College, Guelph.

This course is a gift that the Publishers of "Canadian Farm" are making to their subscribers. It cost considerable more than you imagine, to secure the rights to print this notable series of articles in "Canadian Farm." It is the biggest thing that any agricultural publication has ever pulled off.

Each week for ten weeks, this series of articles will be continued in "Canadian Farm." Each article will be well illustrated and intensely interesting.

Can You Answer These?

Just as an experiment see if you can answer the following questions. Then you will have some idea as to whether there is anything in the course for you to learn.

1. What is the general outlook for immediate improvement in dairy cattle in Canada?
2. What are the three main theories relating to origin of species?
3. What is the limit of milk production in a dairy cow?
4. What are the strong and weak points of the Ayrshire breed? The Jersey? The Holstein?
5. What is the reason for the high percentage of butter fat in Jersey milk?
6. What is the "upward principle" in breeding? (This principle is more important than heredity.)
7. Why is it important to look out for "sports" and "mutants" among cows? How would you discover them, there being no noticeable difference in appearance?
8. What is Nutritive Ratio? Why is it so very important for dairying purposes? What are the German, American and O.A.C. Tables of Nutritive Ratio?
9. What is a correct balanced ration for a cow giving 60 lbs. of milk daily?
10. What do the terms "Record of Performance" and "Record of Merit" mean as applied to dairy cattle?
11. What is one satisfactory system of ventilating a dairy?

You will be able to answer these questions and scores of others when you've completed the course—read the series of articles faithfully. Just think how largely you will increase your knowledge. Knowledge is power—power to make larger profits.

World's Leading Dairy Farms Visited

Much of the material for the course was gathered from visits to the leading dairy farms of the world in England, Scotland, Holland, and the islands of Guernsey and Jersey. There is but one other way to obtain this information. That is, to go abroad yourself and visit these model dairy farms. It would be well worth your while, too, but it would cost you a thousand dollars or more.

Among other things, this course explains the marvelously efficient methods pursued by the "Model Farm" of North Holland where the finest Holsteins are kept.

Two Breeding Systems

This course on "Dairying" also tells about two widely different, yet successful, systems of breeding for milk-producing cows as followed on two Guernsey farms for over forty years. Canadian dairymen should certainly have this information.

But to go into full particulars about this course is impossible in this space. To state the matter briefly, it covers almost everything from the origin and development of dairy cattle and the various breeds to modern dairy stock management. The subjects of "Feeding" and "Breeding" are alone worth many dollars to the man who will apply what he learns.

5-Year Subscriptions Free

The Course aims to meet two classes of readers: First—Those who are interested in dairying, but who do not care to answer the examination questions. Second—Those who will write on the examination questions at the close of the course. Five year subscriptions to "Canadian Farm" will be given free to the subscriber residing in the Maritime Provinces who makes the highest marks, to the one residing in Ontario and Quebec, and to the one residing in the Western Provinces. You have as good a chance as anyone to win a five years' subscription.

"CANADIAN FARM"

Baker Lumber Company's Mill Destroyed by Fire

The yards of the Baker Lumber Company were the scene of another disastrous fire late Saturday evening, when the large saw-mill was totally destroyed, nothing whatever being saved. Cause unknown.

As evidence that the building had been burning for some time before even an alarm was sent in to the fire hall one of the two tall smoke stacks became so baked with the intense heat that it toppled over before the arrival of the firemen. The alarm was first sounded by the night watchman, Mr. W. Bradshaw, almost precisely at eleven o'clock, and the fire brigade were soon on the job. The run over was a long one for the team, but despite the heavy going in the mud the animals made an excellent run.

In a very short time the adjacent vicinity was highly illuminated by the leaping flames and the heat at times was intense. Luckily, however, the wind was blowing in a south-easterly direction, thus saving the lumber yards to the south of the mill. The yards immediately surrounding the mill had been cleaned and put in proper order for resuming work next season, so that the flames were confined to the mill structure only. The long, old and somewhat rambling frame building was soon a mass of flames and burned fiercely like a huge bundle of dry chips.

In a very short time the mill yards, the C.P.R. tracks and other adjacent properties were crowded. A dense crowd of people viewed the flames in awe as they leaped through the structure leaving a fiery path of huge timbers and girders, the roof and tall smoke funnels strewn in a promiscuous manner and tangled in the distorted and warped machinery.

What a conflagration! What a ruin! A mill which has been standing some 25 years, with additions thereto, a couple of weeks ago in full working order, with every saw buzzing, every wheel turning, smoke belching from the smokestack and over a half a hundred men actively engaged; to-day a charred mass and conglomeration of wood and twisted machinery with the bread-winners of several homes out of employment. Owing to the use of constant years the various saw frames, carriages, cutting boxes, etc., in the mill were saturated with old oil and musty with mill dust; this combined with the shingles and sawdust made an easy path for the fiery monster, thus accounting for the quick downfall of the building.

The combined efforts of three or four fire brigades could not have stopped the destructive onward sweep of the flames. The fire had gained too great a headway. The water pressure was also very poor. However, the firemen worked hard and prevented the surrounding property from going up in smoke.

Foreman W. Ashley and President Baker were on the scene early and did everything possible to assist the firemen in fighting the flames. A number of the mill hands were also about carrying buckets of water and keeping watch on the surrounding buildings.

The water tank on the hill, which supplied water to the boiler when the mill was in running order, was empty, and was soon ignited by the flying sparks, but saved by the firemen from being destroyed. The mill office was also saved from the flames. Houses on the nearby streets were closely watched, as the sparks were flying thickly in all directions. However, owing to the recent rains the buildings were still damp and were not easily set on fire.

The firemen remained on the job all night until 7.30 o'clock Sunday morning. The water pressure was very low, which was no doubt due to the small 4-inch main on St. Paul-st. Two streams of water were used, but the pressure was very discouraging.

As stated before the cause of the fire is unknown. The mill closed down two weeks ago and not a speck of fire was in the engine. Besides the sawdust had been all cleaned out from around the various machines, and the surplus oil removed. Night Watchman Bradshaw to a Warder man stated that he was leaving the office on his rounds and intended visiting the mill and recording the time of his visit on the night clock. On leaving the office he was surprised to notice clouds of smoke issuing from the two tall smoke stacks and on the spur of the moment thought that the engineer had put a fire in the company's steamer, the Marie Louise, which was standing at the dock. In the next moment the entire south end of the mill was in flames. He immediately sounded the alarm.

It is understood that over 12,000 M. Baker, president of the Baker Lumber Co., is undecided whether to rebuild or not. The loss of the mill, and especially the machinery, is a very heavy one. The machinery was an excellent working order and besides a large number of valuable tools were destroyed in the fire. The loss to the Baker Company is estimated at fully \$20,000, while the insurance amounts to only \$9,000.

The loss to the town is also a serious one, the weekly pay roll totaling up in the hundreds, so that the citizens of Lindsay, and more especially the merchants, hope to see the mill rebuilt.

It is understood that over 1200 barrel heads were consumed in the fire, having been stored in one end of the mill.

The Baker mill has been standing for some 25 years, and originally being owned by a gentleman called Rodd. It was afterwards purchased by the Rathbun Company, and in time became the property of the Baker Lumber Company. When in full working order in the summer months over seventy hands were employed in an about the mill.

WHICH DO YOU PREFER?

Here are two brand new styles for Fall. The heavy double-breasted ulster with collar that is convertible and buttons up without any harness into a perfect auto or close fitting collar. The shorter button-through model is neat and stylish and makes a smart street coat but for most people is not as serviceable as the ulster.

We show these models in the newest cloths, which, by the way, are mostly brown mixtures. This season we are showing an especially good line of overcoats at

\$15.00

We also have them at \$12, \$18, \$20 and \$25. See our windows for examples.

Had Bad Sore Four Years Replied to Question as To Temperance

ZAM-BUK HAS HEALED IT!

Mrs. Wilson, 110 Wickson-ave., Toronto, says: "About four years ago a sore spot appeared on the right side of my face. This spot increased in size until it became about half an inch in diameter and very painful. I went to a doctor, but the ointment he gave me did not have any good effect. The sore continued to discharge freely, and was most painful. I had it cauterized, tried poultices, and all kinds of salves, but it was no good, and I continued to suffer from it for four years!

"A sample of Zam-Buk was one day given to me, and I used it. Although the quantity was so small, it seemed to do me some good, so I purchased a further supply.

"Each box did me more and more good, and, to my delight, before I had been using Zam-Buk three weeks, I saw that it was going to heal the sore. In less than a month it was healed!

"I know a lady in the east of the city, whose husband suffered for years with an open sore on his leg. On my recommendation, Zam-Buk was tried in that case. The other day, when I saw her, she told me that it had healed the sore completely.

"My daughter, who lives in Lethbridge, Alta., has also used Zam-Buk with the same satisfactory result. I think it is, beyond all doubt, the finest healing balm known."

Such is the opinion of all persons who have really tried Zam-Buk. It is a sure cure for eczema, piles, abscesses, ulcers, scalp sores, ringworm, cuts, burns, scalds, bruises, and all skin injuries and diseases. 50c. box, all druggists and stores, or post free from Zam-Buk Co., Toronto, for price. In case of skin disease use also Zam-Buk Soap, 25c. tablet.

County Matters

Mr. Jas. Steele, Warden of Victoria County, leaves this week for Ottawa to interview certain members of the Dominion Government in regard to the requisite improvements necessary to Pigeon Creek bridge.

"Prizm Brand" Ready Mixed Paint
McLENNAN & Co.

of their parents. To encourage low herding and foster hypocrisy are two of the effects of prohibition in States like Maine of Kansas. To stop drunkenness one must not appeal to external force, which is powerless, but to the man's intellect and will. If a man can kneel to a priest and make a pledge to abstain from drink for one year or for five — if the motive guiding his promise is supernatural, initiating the suffering Christ—there is some hope of the drunkard's reformation.

PRIZE BIRDS.
