oprictor

in this helpless and suffering condition, a friend of mine in Hamilton. Ont, called my attention to the statement of one John Marshall, whose case had been similar to my own, and who had been cured by the use of Dr. Williams' Pink Pills for Pale People. In this case Mr. Marshall who is a prominest member of the Royal who is a prominest member of the Royal Templara of Tompsrance, lad, site four years of constant freatment by the most eminent Canadian physicians, been pronounced incurable, and paid the \$1,000 total disability claim allowed by the order in such cases. Some months after Mr. Marshall began a course of freatment with Dr. Williams' Pink Pills, and after taking some fifteen boxes was fully restored to health. I thought I would try them, and my wife sent for two boxes of the pills, and it took them according to the directions on the wrapper on each box. For the first few days the cold baths were pretty severe as I was so very weak, but I continued to follow instructions as to taking the pills and the treatment, and even before I had used up the two boxes of the pills I began to feel better; my food began to relish and agree with me; I could straighten up; the feeling began to eable to get about on cruthee; my eye came back again as good as ever; and now, after the use of eight boxes of the pills, at a cost of only \$40 — see!—I can with the help of a cane only, walk all about the house and yard, can saw wood, and on pleasant days I walk down town. My stomach trouble is gone; I have gained 10 pounds; I feel like a new man, and when

stomach trouble is gone; I have gained 10 pounds; I feel like a new man, and when the spring opens I expect to be able to renew my organ and plano agency. I cannot speak in too high terms of Dr. Williams Pink Pills for Pale People, as I know they saved my life after all the doctors had given me up as incurable."

Such is the wonderful story which the Express reporter has succeeded in securing verification of in all its details, from the hospital records where Mr. Quant was treated and from the doctors who had the case in hand and who pronounced him incurable. Let it be remembered that all this hospital treatment was two and three years ago, while his cure, by the use of Dr. Williams' Pink Pills for Pale People, has been effected since last September, 1891. So it is beyond a doubt evident that his recovery is wholly due to the use of these famous pills which have been found to have made such remarkable cures in this Mr. Quant placed in the hands of the reporter his card of admission to Roosevelt

hospital, which is here reproduced in further confirmation of his statements: ROOSEVELT HOSPITAL. OUT-PATIENT. Admitted Sept 16.89 Civil Condition____ Occupation Courant -17 Park m Hotoken,

Mondays, Wednesdays and Pridays.

To verify Mr. Quant's statement our reporter a few days ago (March 31, 1892) called on Dr. Allen Starr at his office, No. 22 West Twenty-eighth street, New York city. Dr. Starr is house physician of the Roosevelt hospital, situated corner Ninth avenue and Fifty-ninth street. In reply to inquiry he said he remembered the case of HIGHEST as for Pale People, a popular remedy Mr. Quant very well and treated him some enared and put up by the Dr. Williams but that he was chiefly treated and under beliefle Company, Morristown, N. Y., the more especial care of Dr. Ware. He said he regarded this case as he did all cases of locomotor ataxia as incurable. In order that our reporter might get a copy of the history of the case of Mr. Quant from Perhaps the readers of the Express are the hospital record he very courteously gave him a letter of which the following

> Dr. M. A. Starr, 22 West Forty-eighth street, office hours. 9 to 12 s.m., New York, tors in two of the best hospitals in | March 31st, 1892. Dear Dr. Vought: If you e state of New York-The Roosevelt have any record of a locomotor staxis by spital in New York city and St. Peter's name of Quant, who says he came to the and such ingredients together to give such spital in Albany—was dismissed from clinic three or four years ago, No. 14,037, of and such effects, would give additional inas incurable and, because the case the O. D. Dept., Roosevelt, sent to me from adsented is curable, the man was denied | Ware, will you let the bearer know. It hission into several others to which you have no record send him to Roosevelt

By means of this letter access to the records was permitted and a transcript of the history of Mr. Quant's case made from them as follows:

"No. 14,037. Admitted September 16th 1889, Charles A. Quant, aged 34 years. Born U. S. Married. Hoboken."

"History of the case: - Dyspepsia for past four or five years. About 14 months parsfully six feet tail, weighed 180 pounds | tial loss of power and numbness in lower was very strong. For 12 years I was extremeties. Girdling sensation about abrelling salesman for a plano and organ domen. (November 29:h,1889, not improved, external strobismus of left eye and dilata tion of the left eye.) Some difficulty in passing water at times; no headache but some dizziness; alternate diarrhœs and constipation; partial ptosis past two weeks in left eye.

"Ord. R. F. Bi pep. and Soda." These are the marked symptoms of a severe case of locomotor atexia. "And Dr. Starr said a case with such marked symp toms could not be cured and Quant, who was receiving treatment in the out patient "There never was a case recovered in the

department, was given up as incurable." world," said Dr. Starr. And then said: -"Dr. Ware can tell you more about the case, as Quant was under his more personal treatment. I am surprised, he said, that the man is alive, as I thought that he must be dead long ago. Our reporter found Dr. Edward Ware at

his office, No. 162 West Ninety-third street, New York. He said:-"I have very distinct recollections of the Quant case. It was a very pronounced case. I treated him about eight months. This was in the early summer of 1890. I deemed him incurable. and thought him dead before now. Imagine my surprise when I received a letter from him about two weeks ago telling me that he was alive, was getting well and expected soon to be fully recovered. "What do you think, doctor," was the

cause of his recovery. "That is more than I know. Quant says he has been taking some sort of pills and that they have cured him. At all events, I am glad the poor fellow is well, for his was a bad case and he was a great suf-

Dr. Theodore R. Tuttle, of 319 West Eighteenth st., to whom our reporter is indebted for assisting courtesies, said of locomator ataxis: "I have had several cases of this disease in the course of my practice. I will not say that it is incurable, but I never knew of a case to get well; but the I are treated by specialists and I will say it is not deemed curable by any remedies known to the medical profes-

After this successful and confirmatory investigation in New York, our reporter, Saturday, April 2nd, 1892, visited St. Peter's hospital, in Albany, corner of Al-, shere, upon examination, bany and Ferry-st. He had a courteous reception by Sister Mary Philomena, the sister superior, of St. Peter's hospital, and when told the object of his visit, said she remembered the case of poor Mr. Quant very distinctly. Said she:-"It was a very distressing case and excited my sympathies much. Poor fellow, he couldn't be cured. had better take me back home and had to go home in a terrible condition my money. But I wanted to of helplessness and suffering." The house remained under his treatment for Peter's hospital, said he found only that tim I but secured no benefit. All Charles A. Quant entered the hospital on tim I had been growing worse. I become entirely paralyzed from my lat down and had partly lost control of hands. The pain was terrible; my legs as though the pain was terrible; my legs and that his case being deemed not possible and that his case being deemed not possible mach a mid not retain food, and I fell to his home, as he supposed, to die.

They much a mid not retain food, and I fell to his home, as he supposed, to die.

sufferings. Last September, while that Dr. Williams Pink Pills are not a knowing that it never fails.

other remedies or medical treatment.

A Home-Made Filter.

A simple, inexpensive and effective oil filter, which I made in 1884 and have used ever since, is shown in the accompanying sketch. It is not patented, and your readers are free to make and use it. The oil to be purified is poured into the chamber B, passes through a coarse strainer C, into the chamber D, thence through a fine strainer E, cock G, into the water space K. It then rises to

the surface of the water through the filter J, and is ready to be drawn off from the chamber L through HOME-MADE OIL the cock R as re-FILTER. The filter is made of porous material,

such as bone charcoal, about as fine as coarse sand. This is perhaps the best material for the purpose, though sponge, coarse sand, or sawdust may be used. When it becomes dirty, I take out the filling, wash it thoroughly with potash and replace it.

In the sketch, A is the cover, M is a clean-out cock, and N, O, is a 1-inch steam pipe, which forms two heating coils, one in chamber D and one in K. These coils keep the oil and water hot, only enough steam being used to condense in its passage through and drip from the pipe at O. The two upper sections are removable for cleaning, couplings at S and P allowing the pipe to separate. P is the steam inlet, and Q is a gauge glass, the use of which is obvious. It may be thought that the oil would be injured by heating, but the temperature is never very high; and I have handled all kinds of oil without the least damage to them.-Power.

Answers to a Variety of Questions. Writes a lady: "Will you kindly tell me, through your columns, if you know of any book on the chemistry of cooking? Would it not prove a subject of interest to all for a talk in your department? It seems to me as if some knowledge of the reasons for doing these familiar things, for putting such terest to the performance of them."

There are two excellent works on the subject: "The Chemisty of Cooking and Cleaning," by Mrs. Ellen H. Richards, of the Massachusetts Institute of Technology, and "The Chemistry of Cookery," by Mattieu Williams. Perhaps it will be possible, in the near future, to carry out the suggestions in regard to the scientific reasons why certain things are to done in household

A letter from a girl asks if it will be possible to have some dining-room doors painted, the old paint being so smooth that she fears new paint will not adhere. Painters say that the smoother the surface the better; so there need be no difficulty on that

A subscriber asks how she shall prepare a black walnut suite of furniture previous to painting it white. If she will rub every part with sandpaper and then shellac it, the furniture can be painted when dry.

Cement for repairing broken china, that will stand washing, is wanted. I know of nothing that will resist water, although that quality is claimed for many cements. If the china or glass be thick enough, and the piece or pieces farge enough to hold fine rivets, it can be riveted together, and wil

Fish Cakes.-Take any cold fish which is left (boiled is best), pick out all the bones and skin, pick fine, chop enough cold boiled potatoes to make twice the quantity of fish you have, beat up an egg and stir in make into round cakes and fry in a kettle

A correspondent says that she made a lot of fruit cake, using wine and orange and lemon-juice, hoping to keep it through part of the winter; but it has begun to mould. Fruit cake, she should understand, should be wrapped in paper, placed in tin boxes, and kept in a cool, dry place. She can scrape off the mould, steam the cake for an hour or more, and then dry off in the oven. When perfectly cold put away as suggested. Her mistake was in putting it in stone and in the cellar, which is apt to be

A Western girl asks why raisins fall the bottom of a cake. Raisins should not be put in a cake that has a very thin batter. When it is heated it becomes thinner, and there is nothing to sustain them. Roll the fruit in flour, and stir into the cake very lightly, and at the last moment.-Ladies' Home Journal.

VELOCITY OF METEORS. It has been demonstrated that while the greatest velocity imparted to a cannon ball scarcely exceeds 600 meters a secondabout 1,500 miles an hour; meteors from space penetrate the air with a velocity, it claimed of 40 000, sometimes 60,000 meters per second This tremendous speed raises the temperature of the air at once to 4 000 or 6 000 degrees centigrade, causing in many cases a complete destruction of the meteorite by combustion Within the last two years it has been demonstrated to the satisfaction of all sensible people that Harvard Bronchial Syrup has attained a fame and reputation never accorded to any other cough remedy Its work in all cases has been swift and sure; and the speed with which its good name has flown, is truly marvellous. Harvard Bronchial Syrup has become the family cough remedy in all well regulated Canadian homes Owing to the great purity of its composition it can safely be left where the young can use it when required It contains no poisonous

ingredients and does not like other cough preparations nauseate or sicken During this season of the year no home for Pale People. Truly it is an interesting is safe without a bottle of this wonderful stere was no hope for me, I was the would soon come to relieve that would soon come to relieve that the would soon come to relieve the stery of a most mirror of a dread-structure of a dread-structure when the first symptoms are felt. Our most prominent doctors prescribe it. PRIME SEEDS.

Spratt & Killen.

Farmers who have not yet selected their seeds for this season's planting should do so at once. We have the best in Alsike, Red Clover, Timothy, Barley, Peas, Oats, etc.--all clean, plump grains, In Field and Garden Seeds we keep only the best, and they can be relied upon.

SPRATT & KILLEN,

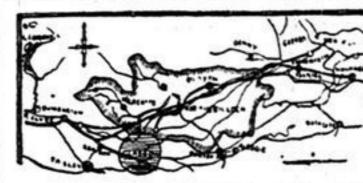

GROCERS AND SEEDSMEN.

Lindsay, April 5, 1892 -100,

English and Scotch engineers and shipowners are talking over a scheme for digging a big ship canal clean across Scotland, so that great steamers may be able to sail up the Clyde on the west coast and come down the Firth of Forth into the North Sea on the east. There is actually a canal between these two points at present; it has been there 100 years, but it is only 56 feet wide and 10 feet deep, so that it is of no use for ocean steamers. The plans now under consideration provide for an entirely new canal, two routes for which are suggested. THE LOCH LOMOND ROUTE.

One of the routes proposes to make use of Loch Lomond and Loch Long, and strike the Clyde near its mouth. On this route, however, the canal would strike a few

miles of mountainous country, part which could be passed by deep cuttings, and about two miles of it by a tunnel 150 feet high through the hill. The length of this route is 69 miles, and the cost of the canal is estimated at \$40,000,000. A more probable and more favorable

route is that shown in the map, which is reproduced from Cassell's Magazine. This line is very nearly direct between the two termini, and is only twenty-nine miles. It is figured that a canal on this line could be built twenty-six feet deep, and 100 feet wide at the bottom, for about \$35,000,000, and it is estimated that a low scale of tolls would yield an income of \$3,000,000

On this route twelve locks would be required, and the canal would cross six railways and the present barge canal. Vessels now bound from a port on the east coast of Scotland to one on the west coast have to go round by the north through dangerous currents and prevailing fogs, or else run down through the crowded English channel, and make a long circuit round the southern end of England. The proposed Forth-Clyde Canal would

lessen the dangers and save some hundreds

A Superb Machine. Another of those superb mechanisms—a

fifteen-ton locomotive steam crane-has lately been placed in one of the great steel plants of England, and presents in its construction some special points of interest. The load to be lifted is fifteen tons, at a radius of sixteen feet, and at this radius the center of the jib pullev is twenty-three feet from the rail level, but the jib is fitted with a derrick motion, permitting it to be lowered so as to be clear under a headway of seventeen feet. All the gearing, also the roller path and rollers, main crosshead, and many other important parts are made of cast steel, and the post is a steel forging. Steam is supplied to both sets of engines by a large steel vertical boiler, double riveted throughout, and arranged to work at a pressure of 120 pounds per square inch. The crane engines have double cylinders nine inches in diameter by twelve-inch stroke, these actuating the hoisting, slewing and derrick motions; the full load is lifted in single purchase, with two parts of 12 chain; the slewing gear is worked by double cones, and the derrick gear by means The lower engines for propelling the crane have cylinders twelve inches in diameter which when introduced into the pores of the by twenty inches stroke, and drive direct on to one of the crane and removing the particles of foreign matter which when introduced into the pores of the kin produce these blemishes. It is not the journals fitted to steel axle boxes, which slide in heavy steel brackets bolted to the truck frames, the load being carried by three yolute springs over each axle box.

Iron and Nickel Experiments. There seems to be no question as to the success of recent experiments in soldering iron with nickel, the adhesion of the metals, in fact, being so intense as to render their

effected at a temperature of from five hundred to six hundred degrees below the fusing point. The volatility of iron when heated to cherry redness is another fact which seems to have been established recently. In this case two plates of iron and nickel, superposed, being submitted to the same degree of heat, the iron passing into the nickel to a notable extent without soldering or adhesion of the surfaces result-On the whole surface of the sheet of nickel an alloy was formed with the iron, which, in the case of one-millimetre sheets, penetrated to 0.05 of their thickness, and contained on the average twenty-four per cent. of that metal, the proportion being naturally stronger on the surface. In any case, the exceptional welding properties which iron possesses in comparison with other metals must, it is asserted, depend on a partial volatilization at a temperature much below the fusing point.

A Wonderful Telegraph.

A printing telegraph system has been introduced in the mills of the Illinois Steel Company, Chicago, by means of which apparatus the men at the reheating pits can inform those at the finishing end of the mill as to the heat numbers of the ingot, the ingot numbers, and the number of rails to each ingot, so that the proper number may invariably be stamped on each rail that leaves the mill. In addition these numbers, the "pit" and "hold" designations are also despatched by the same means. It is stated that though the mechanism is necessarily somewhat complicated, its work is performed in a very satisfactory manner. The transmitter is in charge of one of the men at the reheating pit, and the receiving instrument is in charge of a boy, who reports on a blackboard for the use of the stamber the different numbers and letters as they are printed on the tape by the receiving instrument. The distance between the two is about three

To Get Rid of Fleas.

Place the common adhesive fly paper on the floors of the rooms infested, with a small piece of fresh meat in the center of each sheet. The fleas will jump toward the meat and adhere to the paper.

Where Europe and America are Equal. The product of tobacce in Europe is nearly equal in quantity to the average production of the United States.
