Cleveland, O. *

and what little remained

"-Mrs. A. Collins,

They Can Be made With Little Trouble and are Very Useful.

There are two designs of salt boxes that were recently furnished the Rural New Yorker by one of its correspondents:— The object is to have a box holding a quart or more salt on the bottom, so arranged that when placed out of doors it will be accessible

One is nearly a foot square and eight inches deep at the back, and six inches in front, which is only partly inclosed. The lid E projects one inch in front. The whole arrangement is firmly attached to a post or building. The salt is placed in B in sight of the stock, which soon learn to push up the hinged cover with their noses, and help themselves

whenever they so desire. The other figure shows a different style, as the door is attached to the top, and is simply pressed against when salt is needed. It is best to fasten the door back, as shown, for a few days until the animals know what the box contains, and then it can be allowed to swing in position. Any one using these or similiar boxes will be suprised at the frequency with which stock visit them, and the sight will educate the farmer to be more liberal with salt in future.

Farm Notes and Jottings.

Orchard grass is consinered superior to timothy, but it does not yield as much hay. About one pound of London purple to 200 gallons of water is a sufficiently strong solution for an insecticide.

Sheep will need but little feed from the barn now if grass is plentiful, and a saving of grain may be made in that direction. It will pay to thoroughly examine every ear of corn intended for seed. Corn from fields infested with rust last season should be

ustralian settlers complain that there has been a great increase in destructive insects since the English sparrows arrived and drove out the native birds. All fallen fruit, whether very young or

nearly matured, should be destoyed in order

to prevent the propagation of insects as During the warm days of summer the mapure will "fire-fang" unless plenty of absorbent material be used, or the manure turned over occasionally.

The hoe will compensate for lack of manure in the garden sometimes. Nothing improves vegetables like a good hoeing of the soil and cutting out the weeds.

Peas may still be planted for a later supply. Use the dwarf kinds and keep them well cultivated, as the grass will easily crowd them out during warm weather.

Cows will not refuse stagnant water when thirsty, and as such water contaminates the milk the matter of a plentiful supply of fresh

water is an important one. Trim back the raspberries and blackberries if it has not been done, in order to induce the growth of laterals, though the matter should

have been attended to earlier. Should fowls that have been afflicted with roup shows the effects of the disease during the summer the difficulty of effecting a cure is too great, and the flock should be destroy-

Stock need salt when green food is plentiful more than at any other time. The lack of salt sometimes causes injurious effects from green food that might be avoided by its use

If it pays some farmers to raise the dairy cows that are purchased by dairymen who sell their calves, it should pay the dairyman to raise his own cows, especially if he does so with the aim of improving his herd.

Prof. Hunt of Illinois determined by actual experiment "that the gain for the amount of food consumed decreased during fattening." Also, "that an insufficient food supply for two weeks caused a very considerable loss in feeding thereafter."

Gilt-edged butter depends for its quality not only upon the breed and feed to a certain extent, but more so on the skill of the dairy-The first requisite is cleanliness, which begins at the stable and ends with the packing of the butter for market. Grain may be fed liberally to cows when

they are in full flow of milk, but if the cows are drying off previous to calving it is better to withold all grain if the animals are in good condition, in order to avoid milk fever at calving time. Plenty of grass is sufficient for dry cows, grain being unnecessary. By keeping the surface of the soil loose

the loss of moisture by capillary attraction and evaporation will be partially avoided. A loose soil, if of only an inch in depth, serves as a mulch, or covering, over the surface of the ground, thus protecting the roots and assisting to retain the moisture below. the ground is cold nothing will be

gained by putting seeds of tender plants, such as beans and melods, in too early. The plant that starts, a little later in the season, and which is unchecked, will overtake in growth the earlier plant that has been subjected to cool nights and lack of warmth in the soil. By planting small trees they can be bet ter started and will be less liable to the effects with the trifling cost of con- of drought, compared with older trees. Too much top on young trees is a frequent cause

A POWERFUL PAPER BY COUNT LEON TOLSTOI-

A Beply to the Critics of "The Kreutzer Sonata"-Some New and Startling Views by the Russian Romancist and

I have recieved, and still continue to receive, numbers of letters from persons who are perfect strangers to me asking me to state in plain and simple language my own riews on the subject

COUNT LEON TOLSTOL entitled "The Kreutser Sonata." With this request I shall now endeavor to comply.

My views on the question may be succin-ctly stated as follows: Without entering into

details, it will be generally admitted that I

am accurate in saying that many people con-

done in young men a course of conduct with regard to the other sex which is incompatible with strict morality, and that this dissoluteness is pardoned principally because of supposed physical necessities. Both parents and the Government, in consequence of this view, may be said to wink at profligacy and, even in the last resort, to encourage its practic. I am of opinion that this is not right.

It is not possible that the health of one class should necessitate the ruin of another, and in consequence it is our first duty to turn a deaf ear to such an essentially immoral doctrine, no matter how strongly soci-etymay have established or law protected it. Moreover, it needs to be fully recognized that men are rightly to be held responsible for the consequences of their acts, and that those are no longer to be visited upon the woman alone. She, who is too frequently the victim of man's selfishness, is no longer It follows from this that it is the duty of unmarried men who do not wish to live a life of infamy to practice such continence in

exclusively of their own mothers and sisters. A more rational mode of life should be adopted, which would include abstinence from alcoholic drinks, from excess in eating and from flesh meats, on the one hand, and recourse to physical labor on the other. I am not speaking of gymnastics, or of any of those occupations which may be fitly described as playing at work; I mean the genuine toil that fatigues. No one need go far in search of proofs that this kind of abstemious living is not merely possible, but far less hurtful to health than excess. Hundreds of instances are known to every one. This is my first

respect to all woman as they would were the

female society in which they move made up

In the second place, I think that of late years, through various reasons into which I need not enter, but amongst which the reign of Kien-Lung. The index alone fills above-mentioned laxity of opinion in society | twelve folio volumes. and the frequent idealization of the subject in current literature and painting may be mentioned, conjugal infidelity has become more common, and is considered less reprehensible. I am of opinion that this is not

The origin of this evil is two-fold. It is and, in the second, to the elevation of this instinct to a place to which it does not rightly belong. This being so, the evil can only be remedied by effecting a change in the views now in vogue about "falling in Melbourne. Upward of 700 infants were on family influence and example, and abroad, by means of healthy public opinion, to practice that abstinence which morality and Christianity alike enjoin and to see in their animal passion foes to be conquered rather than friends to be encouraged. This is my

In the third place, I am of opinion that another consequence of the false light in which "falling in love" and what it leads to are viewed in our society is that the birth of children has lost its pristine significance, and that modern marriages are conceived less and less from the point of view of the family. I am of opinion that this is not right, These doctrines and the practices which result from them wreck not only the bodily but what is still worse, the spiritual-strength and vigor of women, and for this reason they should be avoided. The remedy is to and by the direction of the Connecticut legisbe found in that self-restraint which, rightly considered, is an essential element of man's rounds the park, and the Putnam monument dignity and what is as incumbent upon him after as before marriage. This is my third

In the fourth place, I am of opinion that the children (who in our society are either an obsticle to enjoyment—an unlucky accident, as it were-or else, if the number is within the maximum laid down beforehand as desirable, merely an enjoyment of another kind) are educated, not with a view to the problem which they will one day be called on to face and to solve, but solely with an eye to the pleasure which they may be made to yield to their parents. The consequence is that the children of human beings are brought up for all the world like the young of animals, the chief care of their parents, being, not to train them to such work as is worthy of men and women, but to increase their weight, to add a cubit to their stature, to make them spruce, sleek, well-fed and comely. They rig them out in all manner of fantastic costumes, wash them, overfeed them and refuse to make them work. If the children of the lower orders differ in this last respect from those of the well-to-do classes, the difference is merely formal; they work from sheer necessity, and not because their parents recognize work as a duty. And in overfed children as in overfed animals sensuality is engendered unnaturally

Fashionable dress to-day, the course of reading, plays, music, dances, luscious food, all the elements of our modern life, in a word from the pictures on the little boxes of sweetmeats up to the novels, the tale and the poem contribute to fan this sensuality into a strong consuming flame, with the result that sexual vices and diseases have come to be the normal conditions of the period of tender youth and often continue into the riper age of full-blown manhood. And I am of the opinion that this

It is high time it ceased. The children of human beings should not be brought up as if they were animals, and we should set up as the object, and strive to obtain as the result of our labors something better and nobler than a well-dressed body.

ODDS AND ENDS.

In Bohemia there are 2,000,000 Germans Tennyson's popularity is evidently not on the wane in England. Within a week after the publication of his new book of poems, on

Dec. 13 last, 20,000 copies had been sold. During the calendar year 1889, 109,140,917 pieces of coin were executed at the mints of

found in a Turkish library at Damascus a manuscript of the New Testament dating from about the middle of the Fourth century. The Italian government is making a persistent effort to improve the quality of horseflesh in Italy. It has just bought Melton,

Arch. Campbell.

FRUIT!

SUGARS FOR PRESERVING.

Housekeepers will now be pondering over the quantity of preserves to be made this season, and other details incidental to that important work. Right here the question "Where will you purchase your supply of Sugar" comes in. To preserve fruit Sugar is necessary, and alive to this fact we made larger purchases some months ago at an exceptionally favorable quotation. Its a sweet subject but we don't wish to enlarge upon it too much-we merely ask that when you make up your mind what quantity you will require, you will be good enough to call and get our prices. We can't be equalled in value. Nor excelled in weight or sweetening materials:
