An Improved Nest-Box.

This improved nest box will close automatically when the hen gets upon her nest, and will open in the same manner when the fowl wishes to leave, whereby a setting hen such a product that will call for more than may be protected from annoyance from other fowls or animals prone to annoy hens while hatching or laying. It consists of a box, A, having one end half closed by a that they can be so easily grown. They pivoted to the inner side of the box, as

shown at c. A cross-piece, G, unites the ends of the levers, and is provided with the cow cannot separate them as she will wire rods, d, forming a grating, which from when eating at pasture. There should be no the weight of the parts in front of the pivots, kind of vegetables stored in or near a room c, falls, leaving the entrance to the box where milk is set for cream. Those which do open. The grate-rods enter holes in the not give off a strong odor may, when their strip, H, affixed to the board, B. When bacteria have worked in the cream, be quite the hen gets upon the nest in the nest-box as offensive as any. To most people there her weight causes the long arms of the is no odor from potatoes unless some of levers to be raised (the parts being propor- them are rotting, but a bushel of potatoes tioned with that object), which brings the in a cellar has been known to do far more grate-rods up, thus closing the entrance, I, damage to cream and butter than the worth and excluding the other fowls or such ani- of the tubers. Another important point is mals as are liable to give annoyance to the not to keep cream long before churning it. setting fowl. When the fowl attempts to Because it takes longer to get a churning in leave the nest she will instinctively proceed winter is one chief cause of poor winter toward the lighted entrance, and in so do-butter. Stir the cream once a day and ing her weight will be transferred to the churn at least as often as once a week. which will cause the grating to fall, and thus permit her egress. The lid of the box is hinged for the purpose of rendering the nest-box conveniently accessible to any person wishing to gather the eggs. This device is more curious than practical.

Sunlight for Butter.

Among the modern and "improved" appliances for the dairy there has been no provision made for the use of sunlight in coloring butter. Every farmer's wife who has set milk in shallow pans in a dark cellar when it was too hot or too cold to set it above ground knows that the cream is not cream and give it an old and unpleasant pal ones are public debt (including sinking flavor, but light will improve its color al. in-1, \$302,837; legislation, \$195,770; most as much as it will that of vegetal post-office, \$90,498. Under the head of growth. On this subject, Prot. Penry E. Alward, in Hoard's Dairyman, s.ys: Divide 8705,598; arts, agriculture and statistics, any lot of milk from stabled cows and put \$92,550; and miscellaneous, \$75,360.

s from which investigation has esta-50 are not crowded in a space where 25 should | ings. be ; nature's (bird) laws are not transgressed, and they thrive in health. With domestic fowls it is different; they are crowded together, become lousy, and get the "cholera," roup, canker and various soforths-none of which would they have if lice were not preying on their bodies-unless it is roup, which is caused by several

To avoid many of these troubles, watch your poultry, and the first time you see a hen moping around or refusing to eat, or one with feathers rumpled up, or comb looking dark blue at the end, pick her up and look for bugs. You will find them. Grease her well (with an ointment made of lard and sulphur) under the wings and over the vent and on the head. Perhaps if you examine the roosts in the hen-house by taking them with them. They were nestling the ends of the roosts rest on anything, you will be astonished to find the numerous little red lice congregated there. These may be termed the chinch of the hen-house, as they torment the fowls at night and return to their hiding place before the fowls leave the roosts. The roosts should be frequently washed on all sides with coal oil.

Regular Feeding.

The time of year has arrived when farm Those on the average farm soon run down in flesh under the continued pressure of full of them, and one is always likely to

board, B, and provided with a nest-box, C, are sown in the West especially on fallaffixed to a pivoted bottom-board, D, plowed land, or after corn without any vibrating on a wire rod or stud, a, having spring plowing. If the season is favorable its bearings in the side of the box. The this easily produces a good crop. But nest-box is connected by means of links, b, when we consider what the oats take from shown in dotted lines, with two levers, E, the soil, it is found that this easily-grown crop is very nearly the most expensive that the farmer can sow. Cat roots fill the soil much more thoroughly than does any other spring grain, not excepting wheat. The oat leaf is not broad, and if it were the plant is not one of the kind to extract from the air the nitrogenous elements with which the grain is filled. We do not wonder, therefore, that many Eastern farmers are dropping oatsout of the rotation. If it is not convenient for them to buy what oats they feed, they can grow enough for home use. But for most kinds of stock amixture of oil meal with ground corn furnishes the oat ration in a much cheaper form than it can be got in the oat grain. The complaint that the cream has a bit-

ter taste, and that butter made from it is poor flavored, may perhaps be due to the feed. In thin-seeded clover fields there is often a good deal of ragweed with the clover, and when both are made into hay Keeping cream cold does not prevent bacteria from thriving in it if the air surrounding it is impure, but with a well-ventilated milk room not exposed to any odors from vegetables or from cooking you ought to make good-flavored butter in winter, albeit you cannot expect the color and flavor that come from milk made by cows eating June

FROM OTTAWA.

The Estimates Brought Down.

According to the estimates just tabled by the Finance Minister, the total amount to be voted this year is \$21,815,491, which, ad ias yellow on such milk as on that fully ex- ed to that authorized by statute 213,222,posed to the light. The direct rays of the 901, makes a total of \$40,003,392, a decrease sun would in some cases partially melt the of \$4,485,521. Of hie increases the princi-

The Flight of Bees.

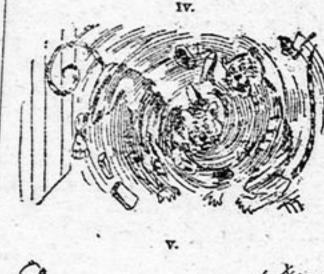

Many authors have attempted to answer this question, but none have succeeded. Theoretically, the solution has been attempted by counting the number of wingbeats per second, and from that, to guess the distance the bees fly from their hives. The results have differed widely, varying from two to twelve English miles. According to Prof. Marcy's "graphic method," the bees make 190 wing-beats per second. His

WHALEY, ROYCE & CO. 158 YONCE ST. TORONTO, ONT. In the first year in which the Aermotor Co. did galvanizing it expended \$50,000 in this work, and did not furnish galvanized goods for the entire year either. No extra charge was made for the goods into which this enormous sum was put.

an enormous quantity of goods, and good goods. The other fellow is a used-to-be, has been, or might have been, had he known, but he didn't know. It is all in the past. His bus iness is in the gone by. Ours is in the present, the future. His consolation is found in the darkey's statement: "It's better to be a has-been than a nebber was." After we have done and are doing a thing and it is known to be the only thing to do, certain little piping voices are heard saying: "We can do it if you will pay us enough money to do it."

We made the Steel Windmill Lusiness, made the model to We made the Steel Windmill Lusiness, made the model to which the best of our imitators can only hope to remotely approach and in their endeaver to approach it are still weakly experimenting at the expense of the user. But to return to our reason is this. WE EULD THE E ST WE KNOW, REGARD.

LESS OF COST, and we believe we know better than anybody. We know that this metal, exposed to the air, will not last unless galvanized, but if properly calvanized, will last scores of years. Barbed wire galvanized will last 20 years, and be practically as good as new. How long does it last painted? But the barbed wire is an eighth of an inch thick, while some of the barbed wire is an eighth of an inch thick, while some of the steel used in the varies of windmills is from a thirty-second to a sixty-fourth of an inch thick, and therefore would last only from a fourth to an eighth as long as the barbed wire, other things being equal, but they are not equal; the sheet metal has holes punched through it and is riveted to thicker The vibration of the thin parts at once cracks the paint around the rivets, and water at once gets in and rust quickly eats

every sort is filled, closed up and saturated with the molten metal and the whole 23 pieces composing the section become soldered and welded together as one piece, then you have something that is strong, enduring and reliable. It is expensive to of zinc and aluminum melted from one year's send to another, one word about the nature of galvanizing. The rilvery white coating which fills every pore and covers every portion of the it is first put on, but which, after standing for a time forms. it is first put on, but which, after standing for a time forms, with the steel, a chemical combination er alloy which cannot be The 5th advertisement in this series will show a 4-Wheel Steel The 5th advertisement in this series will show a s-wheel steel Truck, weighing 175 lbs., which will carry 2 tons, and of which we use 500 in the Aermotor Factory. It will be found almost we use 500 in the Aermotor Factory. It will be found almost indispensable on any farm or in any warehouse. For 2 copies of this advertisement, which is No. 4 in the series, and \$3.50 cash, sent in immediately after the appearance of adv. No. 5, we will branch houses, freight from Chicago added.

Where we can, we shall make liberal offers to accept copies of these advertisements in part payment for Windmills. If you of these advertisements in part payment for Windmills. If you have any thought of using a windmill this year write us of once, stating what you will need, whether Pumping or Geared, and if possible we will make you a liberal offer. The Aermotor Co. proposes to distribute \$500. CASH, IN PRIZES for the best essays written by the wife, son or daughter "WHY SHOULD I USE AN AERMOTOR I" For conditions of competition and amounts and numbers of prizes send for par-
