HEALTH.

Diseases Not Due to Microbes.

The microbic origin of infectious diseases was one of the greatest discoveries in medical history. It has largely revolutionized medical science.

There was a further advance when it was proved that the harm done by the microbes it is, besides, often not resorted to until too was not direct, but due to a violent poison late. Instead of restricting a child's conpoisons normally thrown off by the cells of limit be the power of digestion and the our tissues; and these are innocuous so long tendency to biliousness. Most children by the eliminating organs.

would cause a revolution in medical prac- and taken cold. Bread, dry toast, biscuits, tice, and enable physicians to cure patients potatoes and rice are good vehicles. Chilwith medicines which would destroy the dren well supplied with butter feel the cold

that it emphasizes the supreme importance young adults. Grown-up persons, however, of general sanitation, and that it may lead take other animal fats more freely than to extending the principle of vaccination to most children do, and are, besides, allowed most infectious diseases. But according to much freer selection as to both quality and Doctor Trouessart, of Paris, -we quote from quantity. It is not so necessary to raise the Boston Medical and Surgical Journal, - any clamor for reform on their account. pathogeny too far, and of overlooking the part that belongs to the organism.

He affirms that it will always be impossible to explain all pathology by microbes, and emphasizes the fact that the functions of the living cells themselves may he perverted or destroyed by other agents than micro-organisms. When the functions of cells are perverted, the excesses of secreted or excreted matter become real poisons, similar in their effects to those produced by

The fact is the cells of the tissues have an organization and properties similar to those proper diet and surroundings. Put the patient in the most favorable condition to Good players of the harm are said to of the microbe, and when their functions patient in the most favorable condition to are diseased become veritable parasites, which the organism hastens to eliminate by the well-known process of inflammation.

Ali poisons, whatever their origin, must be eliminated by the kidneys, the intestine or the skin. The fact that the cells and microbes are so similar in constitution and properties indicates that it is unsafe to administer remedies that would be effective against the microbes.

Pastor Kneipp's Water-Oure-

Pastor Kneipp, the famous water doctor from Worrishofen, in Bavaria, the modern place of pilgrimage of the water enthusiasts of all countries, is now in Berlin, lecturing to his followers on the wonderful effect of his water-cures. Says a Berlin letter to the London Daily News: Nearly two thousand persons assembled to hear from Father Kneipp's own lips the mysteries of his system. Pastor Kneipp makes a very sympathetic impression. His long black cassock covers a medium-sized strong body, on which rests an energetic head. Although his hair is rather gray his bushy eyebrows are deep black. From the way he holds himself and his lively movements, nobody would take Pastor Kneipp to be 72 years of age. He is a wandering advertisement for in Toronto. Two dainty creations of lace,

with water was altogether incurable. Water was the panacea for all these evils. A good remedy must be everywhere easily available, especially to the poor. It must be able to be borne, and suited to the different complaints. Herr Kneipp comes to the conclusion that hydropathy, and especially his method, unites all these advantages. He insisted that he was not a medical man. He had never read a medical work. He himself had been given up as incurable forty-seven years ago. He had cured himself with water, and his love for his neighbor had led him to apply the same cure to his fellow men. And good results had proved that his method was the only right one. Finally, Pastor Kniepp pleaded for the use of simple food and clothes, as these control of the vast territory committed to his charge ula: "I told you so." Finally a few orders to everything but the struggle to keep alive. Pastor Kneipphydropathy is the alone saving principle which can be applied everywhere. As one wants nothing but a bath, a watering can, two rough towels, and water, one hat she had put on so proudly an hour ago, It costs nothing and needs no fine building. "In my old wash-house," he said, "I re- Dora glanced at her friend's head. cently treated a minister and a general from Munich, and both would rather remain in the old washhouse than in the new bathhouse."

Tomatoes and Cancer.

One of the delusions that is prevalent in many parts of the country is that tomatoes are the direct causes of cancer, and that those who eat them are pretty sure to run the risk of developing cancerous growth at some time. So fixed is this delusion in parts of the country that people will not touch this most healthful of vegetables. .The fact is there is no connection at all British Columbia, proposes to try if sober Those who eat plenty of tomatoes are now action upon the stomach and kidneys. The chief advantages of the discovery are tend to exclude other ages, especially

Look to The Diet. The cholera increases in Russia and else where as the weather grows warmer, and we must be prepared for it in this country as the hot season approaches. We must look to our diet as never before, for in the | face of every dread disease we must consider as all important the diet, sponging, the bath and similar hygienic measures. One of the truest things about medicine to-day is resist disease and it is better than taking drugs. The truly scientific advances of medicine are based upon this. Medication covered by Guthrie, 1831, and was first emcomes in vogue as a fad or fashion, but diet | ployed in surgical operations in 1846. and sanitary surroundings are always the same. Science has stumped out of existence by hygiene the dreaded plagues that devastated vast populations, and cholera and yellow fever are prevented from sweeping across the country by quarantine, sanitary surroundings and proper diet. Small-pox no longer spreads its contagion from one community to another because vaccination sponsible for sixty-seven murders. has been used as a shield to stop it Puerperal fever that formerly threatened the life and happiness of so many thousands of homes, is now prevented by its great enemy, asepis. Cholera must be fenced in by quarantine, but everyone can help to place himself in a favorable condition by looking well to the diet. Nourishing diet is essential, and this must not be neglected for any mixture that may tempt the palate more. If our bodies are nourished well they can resist disease better. A. S. ATKINSON, M. D.

It will be seen from this that dug through the prison floor to a sewer its extremely objectionable and disagreeable by Bradley, who was armed with two revolvers. The sewer was half full of water, but the convicts swam a distance of 1,500 feet to the mouth of the sewer, which opened into a railroad freight yard. There they broke into a shed, stole all the cloth s and A Bright Englishwoman Did the Work overalls belonging to the switchmen and railroad employees and made good their escape. Some of the men were subsequently recaptured, but it is known that at least three out of the nine who beat their way out of the Charleston prison met their fate on board the ill-fated Naronic.

THESE WERE RINGLEADERS BRADLEY, Jack Conners and Daniel Mullen, all notorious crooks. "Jim" Bradley was a burglar with a long record, a notorious thief and confidence nan and was considered one of the cleverest saie breakers in the country. He was arrested for numerous Post-office robberies in New England towns and a few years ago made his escape from the Greenfield jail in Massachusetts. He broke out of the Charlestown prison twice. At the time of his first escape last July he was serving a five years' sentence for burglarizing a safe in a jewelry store in Boston. He had been in prison scarcely four months when he led a gang of nine convicts, including himself, to freedom and liberty. On the 30th of last October Bradley was arrested in New York by Detectives Aloncle and Formosa of Inspector McLaughlin's staff. He gave his name as Henry Langdon and at first stoutly protested that a mistake had been made. He was positively identified, however, and gave in when he saw the game was up. Bradley was a fine-looking fellow, slick as they make them and every inch of a gentleman in his behavior. This was on November

25. Since his second escape the police of this and other cities have been hunting high and low for him. Within the week the authorities have received information that Bradley had skipped on the Naronic's last voyage and lost his life on her.

ICELAND AND ITS PEOPLE.
