NOTES ON SCIENCE AND INDUSTER.

The processes commonly resorted to for imparting a waterproof quality to otton cloth have proved only measurably successhesides being somewhat complicated and troublesome. The latest and most effective method, as recently described, is claimed to be free from the objections heretofore encountered, and consists, mainly, in first drying the fabric thoroughly in a dry heat and then spreading it lightly over a smooth surface. With a brush this is painted over with a thin coat of boiled oil, which, after having become perfectly dry, is treated to a second coat—and a third if necessary-plenty of time being allowed be-tween each for the effect of the operation on the fabric to become perfect. After the last coat has been applied, if the surface remains sticky, a mixture of one-fourth pound of shellac to a pint of water gently heated until near the boiling point, adding to this a small quantity of liquid ammonia. is painted over the surface. For a yellow waterproof, yellow ochre is employed, and for a black cloth, lampblack is found servceable. The coloring matter, it is said, The preservation of pictures has now be-

come in London, it would seem, as the result of some very ingenious experiments, a regular scientific proceeding, if the accounts canvas or paper, in a vacuum, thus protectwhich is so deteriorating. In carrying out this plan the picture is enclosed in a metal and projecting from the sides like an ordinary frame. In the edges of this case a plate frame, and hermetically sealed to the metal. the surface of the picture and the glass. and thus the picture is in a vacuum. It is asserted that the effect of this plan is to completely protect pictures from the action that operate to destroy paintings exposed orframed in the ordinary way.

An interesting departure in engineering land engine. Further, the new quadruplex two-crank expansion engine is twice as powerful as the triple expansion three-The popular literature of to-day contains crank engine, occupies also 30 per cent. too many love stories of a certain sert. The less room, and carries regularly 210 pounds mutual attraction of the sexes is the sole of steam; the land engine carries only 80 theme of a large majority of the books that or 90 pounds of steam, and gets one horsecome from our printing presses.
