—Mrs. Matthews, of Halifax, is visiting her parents, Dr. and Mrs. Gross, Victoria-ave.

—Mr. H. C. Taylor, of Toronto, was registered at the Simpson house today.

Weather Forecast by Prof Hicks

Storms Predicted for a Part of the Month of November

The following is the forecast for November of the weather by Prof Hicks.

A regular storm period covers the first six days of November. The moon is at first quarter on the 1st, at perigee on the 4th, and on the celestial equator on the 5th. By the 1st, the barometer will begin to fall in western sections, the temperature will rise and by the 2nd to 3rd storms will gather and start on their eastward march from west to east. On touching Thursday, Wednesday and Thursday, the 3rd, 4th, and 5th, rain and thunder storms will pass most parts of the country, with rising barometer, westerly winds and change to much cooler pressing close behind the storm centres, the change to cool or colder appearing in the west-northwest about the 3rd and passing quite over the country to the eastward by the 7th. Frosts, with some freezing northward, will result during the passage of this high-barometer and cool waves.

A reactionary storm period is central on the 8th, 9th and 10th. The moon falls on the 8th, increasing the probabilities of storm conditions on that date. Low barometer, rising on temperature and rain storms in temperature and rain storms will be transited from west to east, will be

Wood's Peppermint Cure

The Great English Remedy. Tones and invigorates the whole nervous system, makes new blood in old veins. Cures Nervous Debility, Mental Weakness, Emissions, Spermatorrhoea, and Effects of Abuse or Excesses. Mental and Nervous Torpor, Deformity, and other ailments. Price 25c per bottle. Sold by all druggists or mailed in plain packages. The Wood Medicine Co., Toronto, Ont.

the natural order on and touching the 8th to 10th. The 6th to the 10th is a probable seismic period. We repeat our urgent request that all readers of this Almanac watch the world's telegraphic news, and make clippings of all despatches reporting storms and seismic disturbances. Do this habitually all the year round, tabulating them into dates and comparing them with our forecasts. In spite of the fact that the moon is moving to extreme north declination, a high barometer, west winds and change to much colder will come down from the northwest and spread over the country generally from about the 8th to the 12th.

A regular storm period begins on the 13th and extends to the 18th, being central on the 15th. The moon is at last quarter on the 15th and in arctic on the 16th. Falling barometer, change to warmer, southerly winds and autumnal rains will pass over the country from west to east on and touching the 15th, 16th and 17th. There will be but little time for reaction to antistorm conditions between this and the on-coming storm period. Possibly change to cooler may break in about the 17th and 18th.

A reactionary storm period is central on the 19th, 20th, and 21st. The moon crosses the celestial equator veering southward on the 19th. Change to much warmer, falling barometer and autumnal thunder storms will appear about the 19th, and run, their course eastward on the 20th and 21st. The influence of the approaching Venus disturbance, as seen in the November storm diagram, will be felt at this reactionary period, the period coming in with high temperature and winding up with change to much colder and spurts of early snow in northern parts of the country. The probabilities of severe and dangerous gales over all the northern lake regions are decidedly strong at this and all the November periods, especially from the 15th to the end of the month. Navigators and shippers on the great lakes, who ignore these probabilities will take desperate chances of paying expensive forfeits.

A regular storm period extends from the 23rd to the 28th, having its centre on the 26th. New moon falls on the 23rd within two days of extreme south declination on the 26th. This period is under the full perturbing influence of both Venus and Mercury, being intensified by the conjunction of the moon with earth and sun at the very beginning. Abnormal warmth, rapid fall of the barometer and clouds of threatening portent will mark the entrance to this period. From about Wednesday the 25th to Saturday 28th, autumnal storms of wide extent and of unusual energy will make their transit across the country from west to east. Rain wind and thunder will dominate in southern parts of the country, while sleet, snow, and an early cold wave may be expected northward. The high barometer, following the storms of this period will push very low temperatures for November far into the southern parts of the country. The moon being at extreme south declination in the crisis of this period, will facilitate the flow of boreal currents from the northwest, bringing a real dash of winter to most parts of this and other countries in the northern hemisphere. All who fail to house or protect out-door perishable products before the on-coming of this storm period will have missed golden opportunities and may count their losses and coddle their regrets.

The 23rd of November is the centre of a seismic period - say, from the 21st to the 25th. We mean by this that such phenomena are much more liable on and touching the 23rd. See if reports of earthquakes do not get into current telegraphic news at this period, although the Saturn and Jupiter periods have about spent their force. It will be found that the seismic disturbances take on milder forms and grow less frequent in the absence of these great perturbing forces; at the same time a combination of the Mercury and Venus equinoxes, as is the case at this period, are known to quicken the seismic gales of our terrestrial globe, especially when the conjunction of the moon and earth and sun adds its electric tension to the strain of a combined Venus and Mercury period. Let us all, especially northward, watch and see how far "Thanksgiving Thursday" will miss an old-fashioned sleet and snow storm in 1908. We wrote this forecast June the 3rd, 1907. Friday, Saturday and Sunday, the 26th, 27th and 28th, will tell the story in sleet and snow and cold. November rains. The month will merge into December in the midst of cold, mercurial cloudiness, with wintery aspects prevailing over all northern to central parts of the country. Be ready for it! A few words of caution about December will not be amiss.

The great drought that has prevailed over most parts of the country for several months practically remains unbroken. A number of readers have written to us, expressing great surprise that "nothing concerning the drought can be found in the almanac." If such readers will recall what we have said, over and over, for the last thirty years concerning "drouths during the Jupiter period," and then if they will read our forecasts carefully for July, August, and September, 1908, they will be surprised that they were taken unawares by the "shortage in general, diffused rains." St. Louis, October 14th.

Nearly Drowned in the Otonabee

Fishery Inspector Watt Saves a Little Lad From a Watery Grave

Fishery Inspector Watt of Peterboro, was successful in saving a little lad from drowning in the Otonabee on Saturday. Mr. Watt was paddling around the C.P.R. bridge, when he heard a splash. At first he paid no attention, but almost immediately he heard calls for help. He hastened up the river towards the slip back of Rogers' boathouse, where the C.P.R. spur line crosses, and there found a youngster struggling in the water. Mr. Watt succeeded in getting him into the canoe and then on to the land.

It seems two youngsters had been playing in the spur line and were running across the trestle work to get away from an approaching train when one little fellow went through. He would have been drowned had not Mr. Watt arrived when he did.

The Field of Sport

RUGBY.

In an exciting game of rugby football Lindsay defeated the strong Y.M.C.A. team of Peterboro on their own grounds on Saturday afternoon, by the score of 9 to 6. The game was one of the most exciting ever seen on the Peterboro field, and the large crowd went fairly wild during the game. The Y.M.C.A. has a very strong team, and kept the Lindsay boys hustling all the way. In fact Peterboro was ahead until within a short time of the close.

When the Lindsay boys went on the field they seemed rather stage frightened, and all through the first half they did not play up to their regular form.

In the first quarter Peterboro got going, and in very short time they landed a touchdown. This, however, made the locals play all the harder, and Peterboro could not score again. After half time Lindsay boys came on fresh and strong, and it was not long before it was seen that the second half would be a hummer. Gradually Lindsay worked their way up towards Peterboro's line and "Duke" Cotton landed a nice drop kick across the line. This counted four, and the score was now only 5-4 in favor of Peterboro.

The Lindsay boys now took heart, and in very short order they scored a rouse which tied the score.

Peterboro spectators now began to look serious, and when Conway made a dash for the line with the ball their eyes opened with wonder and surprise. When near the line, however, he slipped and was pounced upon by a Peterboro man. It was not long until another drop kick landed across the line, and Lindsay was ahead at last. Peterboro was now playing hard, and for many minutes they threatened to make a touchdown. A rouse was all they got, and the score stood 9-6 in favor of Lindsay until the end.

A small shower was falling throughout the game, which made the ground wet and slippery, besides making the ball very heavy and soggy. Both teams played up well, and the return game will be awaited with interest. Lindsay team took down a good crowd, who thoroughly enjoyed themselves. Rugby in Lindsay is now under way, and it is up to the people to patronize their team.

Dr. McPherson umpired the game, and gave entire satisfaction.

SCORE.

Lindsay—
2 drop kicks 4
1 rouse 1
Total 5

Peterboro—
1 touchdown 5
1 rouse 1

Lindsay Ont.

Weak Women

To weak and ailing women, there is at least one way to help. But with that way, two treatments, must be combined. One is local, one is constitutional, but both are important, both essential. Dr. Shoop's Night Cure is the local.

The former—Dr. Shoop's Night Cure—is a topical Dr. Shoop's Restorative, which is an internal treatment. The Restorative reaches throughout the entire system, seeking the repair of all nerve, all tissue, and all blood elements.

The "Night Cure," as its name implies, does its work while you sleep. It soothes sore and inflamed mucous surfaces, heals local weaknesses and discharges, while the Restorative, using nervous excitement, gives renewed vigor and ambition, builds up wasted tissues, bringing about renewed strength, vigor, and energy. Take Dr. Shoop's Restorative—Tablets or Liquid—asa general tonic to the system. For positive local help, use as well
