MODERN MIRACLE - STONES CONVERTED INTO BREAD.

Following the Ore Through the Smelter Until the Finished Product Is Reached-This Is Known as Matte, Which Carries About 60 Per Cent. of Nickel and About 22 Per Cent. of Copper.

Copper Cliff, March & In our last letter describing the process of smelting ore we saw the important part that water plays. Your guide further informs you that two of the things which more than anything else are necessary in modern smelting are wind and water. "If I were to ask you." Black Country stands long at the forge. your guide goes on, "what is the heav- | She has to work now and again with sest thing that passes through these her child at her breast or with a sharp gurnaces, you would naturally answer eye upon the little one as it crawls "ore." But in reality there are nearly about the spark sprinkled floor. It £wice as many pounds of air blown in- makes no difference whether her hands to these furnaces through the pipes that are blistered or her body scorched with two call tuyeres as of anything else. The flying iron, she toils on and, working air serves two purposes. First of all, twelve hours a day, earns from 5 shilat keeps the coke burning, and so gen- lings to 8 shillings per week. She needs erakes heat. Then it burns the iron, no larder, for she lives from hand to or a large portion of it, which is in the mouth, and if her children can sit to ore. Just as you have seen a black- a feast of bread soaked in hot water smith hammering a bar on an anvil and flavored with weak tea they be causing the sparks and shreds of glow- | come quite epicurean. The bellows ing iron to fly around, so the air, rush- blowers, both children and old men into the furnace, burns the iron and women, turn the wheels or pull and sets it free, while the quartz rock, the bellows beams at the princely rate which you saw added, seizes this iron of threepence per day.-London Titand unites with it to form slag."

Out of the furnace at this end flows enatte and slag. Matte contains copper and nickel with a little sulphur and aron. The slag contains the rock that a bookmaker at the track. was in the ore, the rock that was added, and a little of the iron that was in the ore and was burned out. Both of these substances fall together into a Marge tank, which is called a "settler." The matte is heavier than the slag. and so sinks to the bottom. The slag which always stands on the track be- bury, according to information receivlow each furnace. The slag is carried ed at the head offices of the company out to the dumping ground. As it cools It forms good solid ground, on which it is hoped some day to erect new shops

and offices. The matte, as already explained, sinks to the bottom of the "settler." As you watch an electric crane comes moving slowly down the building, carrying an enormous pot which it carefully deunder a clay-lined spout. At the end tory, with a gang of Indian outlaws, of this spout a steel bar sticks into the three United States deputy marshals "settler" near the bottom. The furnace men pass a hook over the end of the protruding bar, and bending to their work smite it on either side with heavy mollen metal breaks from the tap hole. found frozen to death about two miles Mowly it runs at first, blood-red and south of the town Saturday. He had thick. Then it fails with force, spark- | lost his way. ting in a brilliant orange-colored cas-

As the metal falls beneath you the tapper watches it critically. "It is high grada," he says.

"How do you know that?" you ask. "Well," he replies, "if it runs out cold-looking and thick like this," and me points to the glowing stream, "that's good stuff. But if it runs out thin, and there are sparks, then it is low grade," It moes up the converted badly. And

than, you see-" He does not finish the sentence, but jumps to a sheet-iron shield which he throws across the stream in front of him. In his left hand he seizes a long aren rod, on the top of which a pointed wad of clay is fastened. Watching his chance he carefully places the wad of ciay in position, rams it home and closes the spout. Along comes the erane, drops its tentacles or hooks, swhich attendants fasten to the sides

guide informs you, is a Bessemer converter. The word, perhaps, conveys no meaning to you, but he explains that

years ago Sir Henry Bessemer discovered that if you melted pig iron and blew air through it you could burn out the impurities and turn out firstclass steel. About twenty years ago it was discovered that the same principle

The pot of molten metal, which the crane has just brought down the building, is poured into the mouth of the converter, which is a barrel-shaped steel vessel lined with quartz and clay. the work done by the crane seems trivial; but here is a vessel containing five tons of molten metal emptied into another vessel as easily as you would pour is within about eight feet of the floor, to permit a man to throw in a stick hood which fits closely over it and gathers the sparks and flame into the

"The converter," your guide informs is concerned. It carries about sixty per cent. nickel, and twenty-two per cent. copper. The rest is mainly suiphur, the iron having mostly disappeared in the smelting. In this state it is shipped to the refinery in the United States, where the copper and the nickel are finally "How much matte have you made

"Well, let us see; 22 tons last night. and 10 to 18 tons to-day, with probably two or three more before the shift changes-say, 40 tons for the 24 hours. It is not as high as has been done, but the rock is not the best. We will do better when we get into a new bed." marks; and you are tempted to answer, | inquiry.

"Yes, when you know how." Then your guide becomes reminiscent. "Yes, when you know how. But it has taken time and courage and His attitude reminded old Parliamenmoney to learn how. Three years ago | tarians of some of the successful traits there was nothing here where we stand, took money and brains to effect the change. It took more. It took faith in and perseverance to produce the nickel. extent we have accomplished the mir-

acle of turning stones into bread." So far we have been tracing the history of the successful development of the nickel industry. It is an inspiring story; but it is only part of the history of Canadian nickel. There is another story, much less encouraging, but scarcely less interesting. The woods around are full of the evidences of failure. To make the story complete both sides of it must be told. Something about the other side will be given in the articles of this series that are yet

She Mr. Borden spoke for upwards of an paid for them in Crown Bank bills, hour, in an unusually deliberate and which she carried loosely in a black serious vein, reviewing some of the leather satchel, which had been bought that afternoon from the Julian Sale Co. Detective Black and G. de C. O'Grady,

Jr., told of finding the money and jewelry in the Banwells' possession in Kingston, Jamaica. Other witnesses, employes of the bank, described how the shortage in the cash was discovered on the 11th, when Banwell failed to put in an appearance at the bank to take up his work,

Received \$1,000 With Letter. Selwyn, a brother of the prisoner, told of receiving \$1,000 and the following letter, which, he said, was in the handwriting of his brother:

"Dear Hugh,-Have done what I have often threatened-left home for keeps Incidentally I have taken some of the bank's money, so will likely be away for lo'clock this morning the warrant had

rot, they are liars. It's my own idea, and I would have done it long ago but

"As my contribution to the family are now cut off, I enclose some of my pile, which please use for mamma's benefit. But I think it would be better to tell her nothing about it. In fact, you had better not let on you heard from me at all. And for God's sake don't let there be any nonsense about tainted money, or such rot. You need the money, so may as well take it. But go canny about using it. You will probably be suspected and watched, so keep it well out of sight. I have wrapthey are by any chance. Destroy this hear of me again for some time, I hope, as we intend to vanish completely.

This money he turned over to the manager of the Home Bank, where he is employed.

Premeditated. Amongst the papers found on Banwell was a portion of a letter in his own handwriting, written to Miss Hector. It shows he had been contemplating looting the bank. It reads thus: "You must know that I am as anxious as you are. Please make every effort to come to town on Saturday, as I have a shrewd suspicion that it will be too late if we wait another week. Don't tell Muz that you WILL come-that

you are-" On the back of this was a list of the stolen moneys, and also an account of the money spent for the diamonds. In all, \$2,170 was paid for the jewelry, and it only took about half an hour to get rid of that amount of money, according

to the clerks who sold the goods. The courtroom was crowded, many present being women. Banwell, during the hearing of the evidence, sat in the dock. His wife was given a seat in front of the dock. She wore a brown suit and kept her vall down, except when asked to raise it for purpose of identification. H. B. Ardagh represented both prisoners. When the evidence was in Mr. Ardagh argued there was no evidence upon which to send Mrs. Banwell for trial, but the magistrate did not agree with him. Crown Attorney Curry conducted the case for the
