Regard to Their Health.

Mrs. Martha Pohlman Chester Avenue Newark, N. J., who is a graduate Nurse from the Blockley Training School at Philadelphia, and for laix years Chief Clinic Nurse at the Philadelphia d'Iospital, writes the letter printed below. She has the advantage of personal experience, besides her professional education and what she has to say may be absolutely relied upon. Many other women are afflicted as she was. They can regain health in the same way. It is prudent to heed such advice from such a source.

Mrs. Pohlman writes : "I am firmly persuaded, after eight years of experience with Lydia E. Pinkham's Vegetable Compound, that cine for any suffering woman Martha "Immediately after my

health began to fail me. I became weak and pale, with severe bearing-down pains, fearful backaches and frequent dizzy spells. The doc-tors prescribed for me, yet I did not improve. I would bloat after eating and fre-

Compound, for I have found that it cures female ills, where all other medicine fails. It is a grand medicine for sick women."

When women are troubled with irre- present Mrs. Pinkham is the daughtergular, suppressed or painful periods, in-law of Lydia E. Pinkham, her assistant

weakness, displacement or ulceration of for many years before her decease, and the female organs, that bearing-down for twenty-five years since her advice has feeling, inflammation, backache, bloating been freely given to sick women. In her (or flatulence), general debility, indiges- great experience, which covers many tion, and nervous prostration, or are beset years, she has probably had to deal with with such symptoms as dizziness, faint- dozens of cases just like yours. Her ness, lassitude, excitability, irritability, advice is strictly confidential. Lydia E. Pinkham's Vegetable Compound Succeeds where Others Fall.

Eczema Broke Out Also on Hands and Limbs - Suffering Intense-Doctors Said Too Old to Be Cured - An Old Soldier of 80 Years Declares:

"CUTICURA TREATMENT IS A BLESSING"

"At all times and to all people I am willing to testify to the merits of Cuticura. It saved me from worse than the tortures of hades, about the year 1900, with itching on my scalp and temples, and afterwards it commenced to break out on my hands. Then it broke out on my limbs. I was advised to use salt and water, which I did, to no effect. I then went to a Surgeon, who commenced treating me with a wash of borax. This treatment did me no good, but rather aggravated the disease. then told him I would go and see a physician in Eric. The reply was that I could go anywhere, but a case of eczema like mine could not be cured; that I was too old (80). I went to an eminent doctor in the city of Eric and treated with him for six months, with like results. I had read of the Cuticura Remedies often. I was strongly tempted to give them a trial, so I sent for the Cuticura Soap, Ointment, and Resolvent and continued taking the Resolvent until I had taken six bottles, stopping it to take the Pills. I was now getting better. I took two baths a day, and at night I let the lather of the Soap dry on. I used the Ointment with great effect after washing in warm water, to stop the itching at once. I

am now cured. "The Cuticura treatment is a blessing and should be used by every one who has itching of the skin. I can't say any more, and thank God that He has given

Samathing Abaut a Great Industry As It is Seen at Copper Chiff To:day How the Forces of Nature Have Been Utilized in Converting Nature's Raw Material Into Wealth-The Refining of Cobalt Ores.

Copper Cliff, March 17.

Back in 1888 a little smelter was started in a clearing in the bushes about five miles from Sudbury. A few roast beds were laid out, and in a very small way the production of nickel in Canada was begun. The next year another smelter was added and in a few years several more. These were little old-fashioned furnaces, capable of melting 100 to 150 tons each a day. At the present time they would be regard- to carry the power to the Creighton ed very much like children's toys, but in those days they were considered both big and important. At first the Canadian Copper Co, had an agreement with the Orford Copper Co., in accordance with which the latter agreed to take all the nickel matte the former could \$850,000. That is a lot of money, but crossing on the Erie Railroad at Port produce, refine it and return the nickel. Jervis yesterday. They were driving This arrangement held for a time, but in 1900 the Orford Copper Co. decided Ross, who had charge of the electrical that it would be a good policy to have | end of the work, is an old Woodstock Little Falls, N. Y., March 19.—Ray- as much of the refining as possible boy, a nephew of Mr. A. J. McIntosh. mond Bradford, 11 years of age, while done in Canada, and so The Ontario He ranks among the best electrical enplaying on a railroad track here Satur- Smelting Works were built at Copper gineers of the continent, as Mr. Holgate day, was run over by a train and killed. Cliff to roast and resmelt the Canadian ranks among the best hydraulic and Copper Co.'s matte, and bring it up to construction engineers. 75 per cent. of copper and nickel. They built three large roasting furnaces in which the matte was roasted to remove the sulphur, and two other large furnaces in which the matte was melted down. This gave a product which carried about 75 per cent, copper and nickel, and 5 per cent. iron. This was

sent to New York for final treatment. Just as it began to appear that the problem of the successful production of nickel had been solved for the Canadian Copper Co. the smelting works took fire one winter night and burned to the ground. The Canadian Copper Co. appeared for the moment to be helpless. They could produce plenty of nickel matte, but not of the required quality. The smelting works which had taken that matte and reduced it to the proper grade had disappeared in the night. Luckily the Mond Nickel Co.'s smelter was just then closed down preparatory to some changes being made, and the Canadian company succeeded in securing a lease of it. In a short time the company was producing a higher grade of matte than had ever been possible

at the Ontario Smeker Works. The best use to make of a misfortune is to turn it into a blessing, and this the Canadian Copper Co. decided to do with the destruction of the Ontario Smelting Works. The company had learned a lesson from costly experience. It was decided to build a new plant, which should be as nearly as possible fire proof, which should be complete and self-containing, and should have facilities for bringing up the matte to the highest possible standard. This has now been accomplished.

About eighty-five per cent. of the work of refining is now done at Copper Cliff. For the final touches it is still necessary to send the matte to New Jersey. If you ark why the whole work of refining is not done in Canada, the answer given is that a very great additional cost would be entailed. We have already seen that in the process as it is carried on at Copper Cliff. quartz is largely used. If there was no quartz at Copper Cliff, and it had to be hauled a long distance, the cost of quartz would be an important factor in the cost of the refining. Now, in the final process a material is used which is a by-product of another industry. It can be had practically for nothing in is a question of ways and means, they tell you. Men are constantly at work experimenting with a view to the discovery of new ideas and new methods by which a saving may be made in the production of either matte or nickel; but up to date no improvement in the present system of producing refined nickel has been found. Dr. Mond has to send his matte to Swansea, Wales, after it has reached a certain stage, just as the Copper Cliff people have to send theirs to New Jersey. There is another consideration. There is a duty of six cents per pound on all refined nickel going into the United States; there is no duty on nickel matte. Thus it is the American market is practically reserved for Canadian nickel. Caledonia nickel is debarred by the fact that the freight rates on any but the refined article would be prohibitive. So much of the work of refining is done in Canada, and so little remains to be done-only about fifteen per cent.-that the matter is really not of so much importance as it may appear at first sight.

But to return to our story: It was decided to build a smelter that would be a credit to Canada and in all respects in keeping with the great To Manitoba, Alberta and nickel industry. Mr. David H. Browne, the company's metallurgist, and one of the brainlest of the many bright and brainy men whom one meets in connection with their nickel industry, was commissioned to learn what he could about smelters, and assist in the erection at Copper Cliff of a plant 'that would embody all the best results the experience of the world had produced. It requires something more than enthusiasm and knowledge to build melters, however. The new plant at copper Cim mas cost in the near naigh-

borhood of a million dollars. A million dollars is a good deal of money to put into a plant in a place like Copper Cliff, yet that million dollars represents only a part of the expenditure. It was found that partly owing to the freight rates and partly owing to the protective tariff the coal item was such an enormous one that it was worth while considering if something could not be done to reduce the burden. The Huronia Co. is one of the subsidiary companies of the International Nickel Co. The Huronia Co. owned and controlled a water power on the Spanish River at High Falls. The river at this point divided on either side of a beautifully wooded island, and the world such a curative. You can swept own a fall of sixty or seventy use this letter as you please. A splendid power-house has been erected at the Falls, which breaks on the view of the astonished visitor who approaches it through the wilderness at night like a scene of enchantment. The power is carried to Copper Cliff, a distance of 37 miles over six lines of wire. At Copper Cliff it is received in a power station, which is one of the largest and most perfect concrete buildings on the continent, and by means of an immense "step-down" transformer is rendered available for use for all purposes. The great and costly steam plant, which is thus supplanted, is for the present kept as a reserve. It is the intention mine, so that in a short time electric power generated by the forces of nature will be doing practically all the work that was formerly done by steam and coal. The cost of utilizing this water power so far has been about it will save a lot of coal, and will eventually be a paying investment. Mr.

WHE SET IN THEIR HANDS THEIR MAIL

One of the interesting institutions at Copper Cliff is the cobalt factory. Here a smelter has been established for the customs smelting of the cobalt ores. The company itself owns no sliver or cobalt deposits, and all the work done at the smelter is customs smelting. The process has been arrived at after many months of experimental work, and is strictly guarded, admission to the work being positively denied to anyone. This, by the way, seems to be the only secret there is at Copper Cliff. Speaking for himself the writer of these letters must say that he was cordially received, courteously treated, and hospitably entertained, and found everybody stored with information and ready to impart it. They have nothing to hide. they say; on the contrary there is much to feel proud of, and while they/do not go out of their way to seek publicity they by no means resent it. But the silver process is for the present a secret, and is carefully guarded. At present the products shipped from the Cobalt factory are silver bullion and refined arsenic. The cobalt and nicket which the Cobalt ores also contain are sent in alloy to the refiners in New Jersey to be separated there. The Cobalt ores are what the miners call "refractory." To separate the silver is easy enough, but to get the silver without sacrificing the nickel, the cobalt and the arsenic is a more difficult problem. The Copper Cliff people claim that they have solved the problem, but the solution they are keeping to themselves for the present.

Soft to the Operators But Will

ASKS FURTHER CONFERENCE Interests Involved Are So Great That United Mine Workers Are Unwilling to Take Responsibility Without Further Attempt to Bring Peace

and Working Agreement Between Opposing Coal Forces. Indianapolis, Ind., March 19.-President John Mitchell of the United Mine Workers of America, has mailed to George F. Baer, chairman of the anthracite coal operators committee his re-

ply to the committee's communications rejecting the demands of the miners' organization, saying: "Judging from the language employed in your answer to us it is perfect-By evident that we failed to make clear or that you failed to understand the

real import of the propositions submitted by us. "The interests involved are so vast that we are not willing to break off negotiations without making further efforts to reconcile our differences. "We, therefore, propose that further conference or conferences be held be-

tween now and the first of April." It can be stated as authoriatative that the officials of the United Mine Workers of America have decided to allow the Ryan resolution to be eliminated from consideration, and will act upon the assumption that the adopfion of the report of the scale committee virtually has repealed the resolution, which prevented one district from signing an agreement with the operators until all districts had come to an agreement. The report of the scale committee was: "Resolved, that We heartily endorse the policy and action of President Mitchell in this matter, and do now hold ourselves in readiness to meet ou- employers for the purpose of endeavoring to effect a

satisfactory settlement of the wage question." Put Ryan Quietly Aside. All resolutions offered to the miners' convention Saturday, which endeavorpd to effect action upon the scale or the Ryan resolution, were quietly sent to the resolution committee without comment. The position of the miners' deaders with reference to the Ryan resolution will enable the operators and miners to deal by districts, if there is a failure to make an agreement for the entire bituminous field. F. L. Robbins and other operators, who favor signing by districts even if an advance in wages is given, are greatly pleased over the position taken by the leaders of the mine workers.

Charles Tupper, Bart., has almost completely recovered from his recent severe indisposition.
