DR. POGUE, DENTIST,

Nearly Opposite Post Office

Special attention given to Children's Teeth.

HAROLD V. POGUE, D.D.S., L.D.S.

Some Remarks on Things in General

By "THE STROLLER."

There was a very amusing piece of news waffled over to us from the other side, where all these wonderful things happen. It was that some minister had prayed for rain during fair week and it rained. It seems that with that utter disregard for the day of rest, that some people have, the fair people in some New England town, persisted in working on Sunday, in order to get things in shape for the fair, this minister being of the Elijah type, and we could well wish there were more of them! We were doing, and threatened that he would pray for rain to spoil the fair, to all of which, like Ahab of old, they turned a deaf ear, and only laughed at him. However, he prayed for rain publicly in the church, and no doubt privately in the closet, with the result that it rained. And it rained, none of your measly little drizzles, but evidently such a rain as Noah prayed for and got, after he had gotten himself into the ark. Had it been merely a drizzle, the chances are the fair people would have been so worked up, that they would have wanted to tar and feather the preacher, but this downpour simply took the starch out of everybody, and they literally stood in awe, for they could not help but recognize the fact, that there was a man, who stood pretty close to his Maker, and who was very jealous for anything belonging to him, especially His day. The story may or may not be true, we hope it is true. Of one thing we are convinced, and that is that there is nothing to hinder anyone, and he need not necessarily be a minister, or for that matter a male, if he have the faith, to call down a just punishment such as this minister did on this occasion. Of course in order to do so, the person would have to possess more faith than we imagine the majority of us, in this land, have. That we have not got many with this faith, is in evidence weekly. We suppose there is hardly a day we do not sing somewhere in the outer empire, the National Anthem, which is accompanied by a prayer set to music. In it we pray God to confound the politics, and frustrate the knavish tricks of our enemies—is it ever done? One of our churches has something similar in its liturgy, which is repeated weekly, and that is only the negative side of it. Look at what every church, and church member prays for every Sunday in public! Just take one notable prayer, viz., that the time may come, and that soon, when all may know the Lord and that the whole earth may be filled with his glory. Now, if half a dozen churches were to pray that prayer, or even one Elijah, it would be quite a card to have such a man of faith here in Lindsay. It is needless to say he would not be a truly humble disposition, as all men of faith are, but when occasion is required, he would step out as boldly as Elijah. Suppose he warned the railways to desist working unnecessarily on the Sabbath, and if they persisted, prayed for something, say an accident to happen, although we do not believe a dozen accidents and all on Sunday, would make the slightest change in their movements, it would need to be greased on the rails or a plague of grasshoppers, that would make it a possibility. A public prayer of that kind with its answer, would no doubt worm its way into the otherwise impenetrable skulls of our railroad bosses, and convince them, that nothing else could be done. It is doing wrong. We would like to see a man of that kind here or anywhere.

A very concise and important report was that brought in by the commission appointed by the Government to investigate the telephone system in Toronto. The findings of the commission were well known to those who were acquainted with the inner workings of the telephone system. Now, however, the general public will know of them, and will receive this official publication. This wage or fair wage question, especially with the female portion of the community, is one that will have to receive more attention from the powers that be, than it has heretofore received. The claim that it is a matter that can and ought to be settled by the two contracting parties, the employed and the employer, and that it is nobody else's business, seems to have a good deal of logic in it, but only on the surface. The deeper we look into the matter, the more we see that one of the parties, the employee, is really not a free agent, and therefore does not stand on an equal footing in making his or her bargain with the employer. This is especially the case in female labor. As far as is known there is only one class of female labor, where the boot is on the other foot, and that is in domestic service. There is not a factory or store in town, but can get all the female help it requires, at wages that any housekeeper of the more select class (merely from a money standpoint) would gladly pay them for their board, and yet there is a deficiency in the latter, that is both appalling and appalling. The Bell Telephone Co. is one of those corporations that take full advantage of that state of matters, and through their very plausible way of putting things manage to get the cream-de-la-cream of girls looking for work. Their way of presenting things is to inform the girls making application for work that they have a very long waiting list, and that it is not every one they would take, in fact, that it is a sort of exclusive job in the up-

For Churches and Schools PEDLAR ART STEEL CEILING. Above 2,000 modern designs in every style of color scheme—adapted to any color scheme or architectural motif. Address: THE PEDLAR PEOPLE, Ottawa, Montreal, Toronto, London, Winnipeg.

irgly pay out dollars, even the poorest of us, for amusement, but grudgingly pay out cents, even the best of us, for what is of infinitely more importance and more uplifting. We came across some figures the other day that will interest every one who is interested in the progress of the British Empire. Some time ago we brought up our readers' attention, the immense strides made by both Great Britain and the U. S., the one under the reign of free trade, and the other under that of protection. When we see the figures that are put up by every nation and see the strides they are all making, we cannot but come to the conclusion that, whatever effect tariffs may have on their trade, there must be something else, that is even a more potent factor in making things hum along the way that they are doing. We would venture the opinion that the individual efforts of the citizens have a great deal to do with the success of the nation, more even than any tariff. This is being exemplified to-day, in the difference between British and German methods. As our readers are aware, Britain is working under free trade, and has the world for its market, from which it draws freely, and gets any bargains that are going. They are a nation, that other nations find it very easy to do business with, the least trouble. No other nation works under equal advantages, not even the U. S., where raw material of great variety is found within its borders. Against these advantages are to be put the influence of the tariff, which dominates most of Britain's industries. They work on the principle of doing the least they can for the most money they can extort, a system that has never been successful outside of the tariff, probably the worst feature in the whole industrial life of the nation, is the immense amount of money that is wasted in liquor, especially of the working man. We think it was Lord Rosborough, a man who never speaks unless he has something to say, who said that if the British mechanic would give up his liquor, he would guarantee him the world for his market, let him out his tariff walls as high as they chose. In Germany, on the other hand, they have protection to the hilt, but they have their mechanics trained to regular hours and habits, so that in contradiction to their British brethren, their great object is to do as much as they can for the least they can live on. Whether this will compare as they grow richer, and the world, remains to be seen. Just at present the result is, that individually and collectively, they are outpacing the British nation in proportion. It is an economic truth, that one man given the same energy and tools, can produce as much as another man with the same energy and tools. The one man only gets 50 cents for his work, while the other may get \$1.00, but the wealth produced is exactly the same, whether it is a bushel of wheat, or a ton of iron. We think that the world, remains to be seen. Just at present the result is, that individually and collectively, they are outpacing the British nation in proportion. It is an economic truth, that one man given the same energy and tools, can produce as much as another man with the same energy and tools. It is an economic truth, that one man given the same energy and tools, can produce as much as another man with the same energy and tools. The one man only gets 50 cents for his work, while the other may get \$1.00, but the wealth produced is exactly the same, whether it is a bushel of wheat, or a ton of iron. We think that the world, remains to be seen. Just at present the result is, that individually and collectively, they are outpacing the British nation in proportion. It is an economic truth, that one man given the same energy and tools, can produce as much as another man with the same energy and tools.
