Here's an update on COVID-19 cases in Ontario as well as in the greater Kawarthas region.

Ontario is reporting only 745 new cases today, mainly because Toronto Public Health has a negative number of cases as a result of migrating all of its data to Ontario's Case and Contact Management system.

During the migration, the health unit identified duplicate cases and made other adjustments resulting in no new cases and an adjustment of -119 cases today. However, Toronto Public Health reported 961 new cases on February 1; removing the negative adjustment and adding these cases, the actual case count for Ontario today would be around 1,800 new cases.
