

protect your health and those around you. Ontarians are encouraged to get vaccinated as soon as they are eligible and monitor their health after receiving their vaccination.”

Canada reported its first case of blood clotting last Tuesday in a Quebec woman who received the same vaccine. A second person who lives in Alberta and received a version of the AstraZeneca vaccine supplied by the Serum Institute of India, developed a blood clot and “has received treatment and is recovering,” Canadian health authorities wrote on Twitter.

Blood clot formations linked to the AstraZeneca vaccine “remain very rare” according to Health Canada and Canada still believes that the vaccine’s benefits “outweigh the potential risks,” Health Canada and the Public Health Agency of Canada said.

Health authorities added that they would “continue to monitor the use of all #COVID19 vaccines closely and examine and assess any new safety concerns.”
