What of the nullification of law through technicality, the defeat of substantial justice through delays and quibbling, the setting up of questionable plans and defenses, the use of the "higher" sophistry to discover methods of evading and thwarting legislation imposed in obedience to general public policy? There is one canon in the proposed code which, somewhat vaguely to be sure, hints at these practices. It declares that "no client, corporate or individual, however powerful, nor any cause, civil or political, however important, is entitled to receive any service or advice involving disloyalty to the law." China's first school of forestry wil shortly be opened at Mukden. The Chinese empire is usually pointed out as the worst example, among modern nations, of forest destruction. The floods which are periodically poured down from the denuded mountains are destructive beyond comparison with any other country and the want of forests is assigned as the chief cause. Wood is scarcer in China than in al most any other region in the world, although the country is well adapted to the growing of trees.

There is the seemingly unending confusion out in the area where the President-makers are moving about before til he has watched its operation for settling into the reservations for the respective State delegations. Here's a United States Senator whose name is a household word talking to the Governor of a State who perhaps aiready has been "mentioned" as a likely candidate for White House honors "next time." There they are, as you look down from your seat on terrace or in gallery, "conservatives" and "radicals" -- patriot and self-seeker, demagogue of statesman--according to the standpoint of the faction to which you belong. Nowhere can they be seen all together in animated mixture except every four years at the national party convention.
