# Canadian Farmers Profit From Wheat

LOOK FOR W. L. Dougles

name and the retail price

tamped on the bettom.

The war's devastation of European crops has caused an unusual demand for grain from the American Contient. The people of the world must be fed and wheat near \$2 a bushel offers great profits to the farmer. Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by

President O W. L. Douglas Shoo Co., 185 Spark St., Brockton, Mass.

and other lands at remarkably low prices. During many years Canadian wheat fields have averaged 20 bushels to the acre many yields as high as 45 bushels to the acre. Wonderful crops also of Gats, Barley and Flax. Mixed farming as profitable an industry as grain raising The excellent grasses full of nutrition are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent. There is an extra demand for farm labor to replace the many young men who have volunteered for the war. The Government is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or

### Government Issues Warning Against Fly Poisons

Following is an extract from "The ransmission of Disease by Files," Supplement No. 29 to the Public Health Reports, April, 1916.

"Of other fly poisons mentioned, mention should be made, merely for a purpose of condemnation, of those composed of arrenic. Fatal cases of polsoning of children through the use of such compounds are far too frequent, and owing to the resemblance of arsenical poisoning to summer diarrhea and cholera infantum, It is believed that the cases reported do not, by any means, comprise the total. Arsenical fix destroying devices must be rated as extremely dangerous, and abould never be used, even if other meas-

106 fly poisoning cases have been reported by the press within the last three years. As stated above this number is but a fraction of the real number Protect your children by using the unfo. efficient, non-poisonous fly catcher

The O. & W. Thum Company MICHIGAN GRAND RAPIDS

The Children's Poet,

In the St. Nicholas Magazine Hildegarde Hawthorne gives a sympathetic sketch of the life of Robert Louis Stevenson, whose "Child's Garden of Verses" is perhaps the most popular book of poetry ever written. His passionate attachment to children is expressed best by Andrew Lang, whom Miss Hawthorne quotes:

"There was a very pleasant trait in Stevenson's character which, per haps, does not display itself in most of his writings-his great affection for children. . . . In an early letter he writes: 'Kids is what is the matter with me. . . . Children are too good to be true.' He had a natural infatuation, so to say, for children as children . . . little boys and girls Panacea of the Home the World were his delight, and he was theirs,"

It Sounds Ridiculous Joseph H. Choate said, at a lunch-

eon in New York:

"When the Germans talk about proage more serious maladies, such as tecting little nations, freeing the seas and championing international law, it Boschee's German Syrup you can get sounds so ridiculous that it reminds me relief. This medicine has stood the test of fifty years. It induces a good

is not in use. It is a surprise how long it will look neat and stay in good shape when cared for in this manner. A box two by three by four feet high is a good size. Screw harness hooks make good hangers. A little box may be attached to the inside of the door for holding combs, brush, etc .-lowa Homestead.

### REMEDY FOR WORMY HORSES

Mixture of Nux Vomica, Genetian Root, Areca Nut, Salt and Arsenious Acid, is Good.

Werms in horses and colts are so common that if they do not thrive it is a good plan to give a worm remedy of some kind. A good mixture to use is: Two ounces of powdered nux vomicu; four ounces of powdered gentian root; six ounces of powdered ar-An ancestor of Count von Bernstorff een nut; four ounces of continon suit. the dismissed German ambassador. and two drachms of arsenious acid. fought against America in our war for Mix them thoroughly. Give a heaping freedom. The fact is brought out by teaspoonful to every 250 pounds of live passage in the "Souvenirs du Cheweight of horse morning and evening valler de Cussy," Among the acquainfor about ten days. The medicine may tances made by the chevaller in 1820, be mixed with ground feed or sprinkled when he joined the staff of the French embassy in Berlin, was the court over dampened outs or corn.

chamberlain, Count von Bernstorff, given the horse during the treatment. If too much feed is given the medidor. "Countess Bernstorff," wrote De cine is not strong enough to stupify the worms and cause them to loosen 'America.' This was bestowed on her because she was born in that country their attachments to the linings of the digestive tract. Also, the howels should be kept open so that the worms will be passed before they recover regiments hired out to the English from the effects of the medicine. A well-salted bran much will generally insure such action.

# UNIQUE FEED RACK MOVABLE

So Simple of Construction That No Bill for Material Is Given-Size Depends on Needs.

This rack is so simple of construc tion that we give no material bill for it. Hesides, the length and width will depend upon your individual needs, You can hitch a team to one end of this unique rack and easily move it.

The runners are 2 by 6, the framework of 2 by 4, and the slats forming the "V" trough are 1 by 4. The plan clearly shows how to make this feed rack.—Farmers Mail and Breeze.

# PLAN FOR FATTENING HORSES

Boiled Barley Not Necessary, as It Can Be Done With Oats and Bran-Best to Use Hay.

It is not necessary to feed hoiled barley to horses in order to make them fat, because the fattening could be done with onts and bran, with possibly the addition of a little flaxseed. as recommended for the mares, fact, the same method of feeding as was recommended for the mares would answer very well for this purpose, but it would be necessary to feed grain more liberally, and it would be better to use hay instead of straw.

# REMEDY FOR CHOKED ANIMA

White of Egg Poured Down Throat by Means of Long-Necked Bottle Will Prove Efficacious.

For an animal that has choked on an apple, potate or turnip, pour the white of an egg into a long-necked bottle, put the mouth as far back as possible in the animal's throat, elevate head, and slowly empty the contents, It will lubricate the throat all the way down and the object will generally pass on to the stomach after a few

In order to give ewes exercise it is good plan to place food and salt some distance from the fold in order that they will go to it.

System Saves Labor. It is possible to reduce live stock raising-to a system in which much of the work can be done automatically, thus saving labor.

Practice Cleanliness. Keep the swine harrel. trough and water trough clean.

HAY SUPPLY FOR DAIRY COWS

Roughages Are Relatively Cheaper Tnan Grain, but Should Not Bo Fed Exclusively.

"Because of the large hay crop and the small demand for it now, roughages should be fed to the limit of the dairy cow's capacity, says Prof. C. C. Hayden of the Ohio experiment station, "Relatively, the roughages, like hay and corn stover, are much cheaper than grains, and hay is of unusually good quality. Roughage, of course, should not be fed exclusively, as such feeding might lead to compaction and death, even in dry cows and helfers. Some grain is needed in every dairy ration." "Choice alfalfa hay at \$20 a ton is same class as alfalfa, and clover is

\$5 more than it is now quoted." proved far superior in numerous ex-

agriculture, reminds the dairymen that he must be able to answer the following questions from the prospective layer of a herd sire. Is the sire registered? What is the record of his dam? How many advance registry daughters and proved sons has his sire? And what are the records of his grandlams and grandsires? If the of the country and the manner of life breveler is selling a registered cow he of those interested, it is manifestly immust enswer: What is her record; the record of her dams and grand dams and the ability of her sire and grandsires to produce advance registry daughters and proved sons,

To answer these questions and mee! he demands of buyer the breeder of purebred dairy cattle must do official testing. This testing is under the supervision of the various state colleges of agriculture. Breeders ready to take up this work or wishing further information, should write to the dairy de instment of the college of agriculture of their respective states,

# CORK-BRICK BARN FLOORING

Non-Absorbent and Adapted to Needs of Farm Animals-Laid in Cement Over Concrete Base.

The search for a warm, non-absorbent flooring suited to the needs of horses, cows, hogs and sheep has led to the adoption of cork brick. The brick, as described in Popular Science Monthly, consists of finely granulated cork and refined asphalt, heated and theroughly mixed, and then molded under pressure into bricks nine by four hy two inches. The flooring is laid in cement moriar over a sub-base of concrete and crushed stones or ashes.

# MILK ALL COWS THOROUGHLY

Little Extra Time Required After Usual Amount Has Been Secured Will Pay Dividends.

Sufficient time ought to be taken to milk the cows thoroughly even if much other work on the farm cannot applied four times during the first seabe accomplished. A little extra time required to work

and manipulate the udder by hand after the usual amount of milk has been obtained will pay dividends and sometimes make a profit where otherwise there would have been a loss,

A Calving Ration. Have the ration for the cow that is due to calve soon cooling and slightly laxative. It will put cow and calf both in better physical condition.

Upset Calf's Digestion. Nothing will more quickly upset the digestion of the calf than feeding warm milk at one feed and cold at

attention to their care and maintenance have no object lessons or litera-The present sharp competition in ture at hand to guide them in laying

Most persons engaging in the cultivation of a home fruit garden will forms. In a majority of cases, however, the aim will be the one first men-

In order to prove a source of constant pleasure and gratification, a fruit plantation must claim the attention of its owner from early spring to late autumn; its products, too, must be so planned as to cover the greatest possible portion of the seasons between frosts. The problem presented involves a succession of fruits, from earliest to latest, as well as a combination of light-loving and shade-enduring plants. The intensive culture and the liberal feeding to be given demands that all plants be of types which bear early and heavily in proportion to their size. The question of longevity is of no moment; immediate fruit production is the object. With this view of the question, taken in connection with the great variety of conditions presented both by the extent possible to make general statements.

# **BADLY GNAWED TREES SAVEL**

Scions Cut Long Enough to Insert Into Bark Above and Below Wound Are Efficacious.

Trees that are badly knawed may he saved by bridge grafting. Cover the wound with grafting wax, after which wrap securely with burlap or cover with earth. The scions are cut long enough to insert into the bark below and above the wound. From three to five are commonly used on injured

If the injury extends to less than half the distance around the tree it is not necessary to bridge graft as the bark will grow over the wound in one or two years if the injured portion is covered and protected to prevent rot and infection.

If trees are hadly injured it will not pay to transplant them.

# BORDEAUX FOR LEAF BLIGHT

New York Station Repeats Assertion That Mixture is Effective as Trouble Preventive.

A bulletin of the New York experiment station repeats that there is no question as to the efficacy of the bordeaux mixture as a preventive of the leaf blight, which has been so destructive to strawberries in many parts

of the country. The young plants should be sprayed the first year as soon as they become established, and the mixture should be son, and at least twice before fruiting the second season.

The mixture is now prepared with only half the strength originally used, the formula being two pounds of lime and three pounds of copper sulphate, with 22 gallons of water.

Time for Thinning Apples, When thinning apples thinning should be done when the little apples are about one inch in diameter. Do not leave any apples nearer together than four luches.

Street Car Floor Forced by Conductor to Turn Over Money.

A conjurer performing at a loca theater got on a street car with two members of his company, and after a while, moved by some sudden impulse, he pretended to find sundry quarters, stooping here and there, and producing them from under the sents, on the floor, anywhere, to the amazement of the passengers, says the Toronto Mail.

His two friends laughed heartily at the Joke. Not so, however, the conductor, who came forward and sternly demanded the twelve 25-cent pieces h had "picked up," in order that he might hand them over in accordance with the regulations governing lost property found in the cars,

In vain did the "finder" protest that it was only a conjuring trick. The conductor obviously did not believe And in the end, in order to avoid a compulsory visit to the police station, he had to give up the coins.
