Finish up as you Go. There is a satisfaction and a feeling of latent Strength in the breast of a man who Starts a thing-and Finishes it. You will find this true if you do it. The most important task is always the task at hand. Complete it. Make it stand square and clean when you leave it. Look it over and be sure no Ragged Edges remain.

Finish up as you Go. Make Thoroughness one of your Masters. Searchingly note the trifles. Get them together and know them. For out of them comes-

Perfection. Finish up as you Go.

AN OUNCE OF MEAT

An ounce of edible meat-lean mea fat and lean, suct or fat trimmed from steak, chops, or roast-seems hardly worth saving.

Mickle Makes

Many households take just this view of the matter-do not trouble to put such an insignificant scrap into the icebox or soup pot-do not bother to save for cookery a spoonful or two of drippings or a tiny bit of suct or fut.

Yet if every one of the 20,000,000 American families on the average wastes each day only one ounce of Half of the Women Will Be edible meat or fat, it means a daily waste of 1,250,000 pounds of animal food-456,000,000 pounds of valuable animal food a year, according to statisticians of the United States department of agriculture.

At average dressed weights, it would take the gross weight of over 875,600,-000 steers, or over 3,000,000 hogsbones and all-to provide this weight of ment or fat for each garbage pail or kitchen sink. If the bones and butcher's waste are eliminated, these figures would be increased to 1,150,000 cattle and 3,700,000 hogs.

Or, again, if the waste were distributed according to the per capita consumption of the various ments (excluding bones), it would use up a combined herd of over 538,000 beef autmais, 291,000 calves, over 625,000 sheep and lambs, and over 2,132,000

Millions of tons of feed and hay. the grass from vast pastures and the labor of armies of cuttlemen and butchers also would be scrapped by this meat-waste route.

Waste of ment or fat is inexcusable, way the government experts. Every bit of lean ment can be used in soups, stews, or in combination with cervals; every spoonful of fat can be employed to cookery; every hit of drippings and gravy can be saved so easily and used to add flavor and nourishment to other

# Australia at Arras.

The Australians in the fighting round Arras maintained the reputation for desperate bravery they wen on the Gallipoli peninsula. They seem to fear shells no more than summer rain, and they have a habit of clinging to positions they have taken as long as there is breath in their bodies. Ac- mushrooms. Melt two tablespoonfuls

the Antipodes, and they chafe in idleness, says the Philadelphia Public Ledger. Their temperament is not that of many of those with whom they fight. They pity the "Tommy" because it does supply more starch and fat. they think he is "builled." They believe The unbolted corn meal, which is of themselves every whit as good as their | good flavor and is preferred by many, officers, and they loathe the "Bull has more tissue-building material, as Ring" (their name for the drill ground). This restless independence wheat flour. is the natural result of a lifetime largely spent in ranging the unfenced posed to be contracted through eating spaces in a lonely self-reliance. But corn meal. Scientific investigation has the Hindenburg line has learned that when these "bear-cats" are turned loose they are not to be stopped until ties. they are shin.

## Supporting Themselves in 1940, Pastor's Prediction

Rev. Dr. Waldo Amos of Hoboken, N. Y., predicts that by 1940 half the women in the country will be self-supporting, and that marriages will gradually decrease in number.

"It is a startling fact that young women are not marrying today," he said, according to the New York Evening Journal. "Hundreds of thousands are going into business. The supreme mission of women in life should be to become mothers and to make homes, The objection that many have to being married is that they become depend-

Doctor Amos sald that all through New England there are many villages which are known as "she villages," The men have left for the large cities in the hope of gaining wealth.

"Men are inrgely responsible for the failure of women to marry," he said. "Many men are too busy making money to marry, or refuse to marry on small salaries. This has forced

women into business. "Statistics show that in 1900 one out of every five women was self-supporting. By 1925 one out of every three, and by 1940, one out of every two will be self-supporting."

Use wide-necked bottles with paraf-Occasions arise where words of clear-headed, far-seeing guidance fin seals for putting up fruit and prefrom men of knowledge and judgment would be helpful to all of us. serves; use glasses or crocks for jellies rightfully look for this from prominent men who ought always to be puband jums; use bottles and jugs corked and sealed with paratin for fruit licists. But in our inconsiderate haste we insist on immediate declarajuices, catsups and other liquid prodtions of opinion from those whom we are accustomed to follow. Not only must their views be given instantly, but they must also be sharp and

Thus those who should be the leaders of public thought too frequently become panderers to public impatience. They are too often competitors for publicity. They strive to get on the front page of the first edition of the newspapers. To do this, speeches and interviews even on the gravest and most complicated questions are prepared with frantic precipitancy and in lurid language. That necessary delay required by gathering and mastering data and carefully working out the problem which it presents would make out of date the publication of the conclusions thus formed; while cool and balanced language would lack that sting and eccentricity at present so attractive to our taste. We require that the outgivings of our public men shall be full of "pep" and "punch;" otherwise they are rejected by a public palate which has become accustomed by no means so unreasonable now as says Mrs. Van Zile. Although the bolt- to high seasoning.

Thus our public discussion is peculiarly heated, spasmodic and charged with error. Instead of a full statement of facts, they are often given only in part and with prejudiced ardor. Extravagant catchwords more and more frequently take the place of careful reasoning; and explosive epithet rather than clear argument is made the weapon of serious controversy. So it is that public opinion, lashed by inconstant winds, whirls in eddies, now about this point and now about that, instead of flowing in full and constant current.

The papers of the statesmen of our formative period, and indeed of no danger from eating ordinary quanti- the more powerful ones down to recent times, when compared with many produced today, disclose the change in the manner of thinking of public men and their expression of it. Those of recent years appear to be immature, hastily prepared and overemphasized when read in parallel with those of our early and middle history.

Yet those calmer and simpler papers dealt with problems as weighty as any that ever confronted the mind of man, and were written at times when popular passions raged ungovernably. The others discussed questions no greater and appeared at times no more perilous. They indicated that we have indeed acquired the harmless "punch" of extravagance, but have lost the deadly "punch" of moderation. In gaining velocity we seem to have impaired our sense of direction.

#### \*\*\*\* The Gift of Organization.

Before the war we used to hear good deal about the value of the particular person called a business man, in the art of governance. No doubt there are more sorts of business men than the one; but during the war the business man has been given his opportunity; and the result is not unnaturally a certain sense of disappointment. There is, in fact, no mystic virthe in bastness, which may mean any thing from operating on the stock exchange to selling goods across a counter. The quality chiefly required in administration is the gift of organization, which is frequently possessed

by men who know little of commerce. -London Mail.

# Making Eggs Count.

It is not such a hard job to market eggs so that one gets the best prices and so that none of the eggs spoil. One poultry raiser offers these simple precautions for improving the egg, brey, it will be a love match,
