## DIPLOMAT AS WELL AS SOLDIER

Gen. Hugh L. Scott is probably most unique character in the Unit-States army. In the days of the dian diaturbances on the Western ontier he gained distinction as an dian fighter, and as remarkable as might seem, later became the Inans' friend and counsellor. He is miliar with their folklore and talks ir sign langunge.

Several years ago, when one of the went on the war path General It was sent to the scene of the disrbances and after a few days of endly negotiations succeeded in inging about peace which the armed rces of the state had been unable to complish.

After Villa's raid on American rder towns, murdering Americans d looting their homes, General Caran having gained control of the sittion and an American force having en dispatched into Mexico to run

He is now the military head of the American mission to Russia.

# **HEAD OF ARMY TRANSPORTATION**

Maj. Gen. Henry G. Sharpe, as quartermaster general in the army, in the present emergency has before him one of the greatest tasks in the entire service. His department is charged with the duty of providing means of transportation of every character. This includes the transportation of recruits to mobilization points, to concentration camps, and from there to points of embarkation, and the arrangement of transport facilities for the carrying of our armies to Europe.

At the present time the war department expects, if the war lasts, to transport armies totaling 3,000,000 to the European battle front. The transport fleet at the outbreak of hostillties was entirely inadequate to perform more than a minute portion of this task. It has been enlarged as if by magic, and by the time for shipment of the first great army General Sharpe is confident that all facilities

there are made to

be available for the speedy transportation. The feeding and clothing of ),000 men is another task which has to be performed by this department. ady food and clothing have been purchased in quantities which will have ries working continuously in turning out their products. Automobiles, mobile trucks, motorcycles, wagons, borses and mules and their equipt also have to be purchased under the supervision of General Sharpe. The one perplexing problem that inconvenienced this department was how

ouse the armies while training. When the war broke out, the quarterer general found that there was not sufficient tentage in the United States than shelter the Mational Guard. To build temporary wooden barto a pope so ved the problem, and now as fast as cantonment are located the necessary shelter is being provided.

# **ADMIRAL GLEAVES WINS HONORS**

At the beginning of our participain the greatest war of history, Admiral Albert Gleaves, comfing the convoy which piloted the fleet of transports, worked in et harmony with Vice Admiral m S. Sims, who sent out deers to furnish additional protecto our fighting men through the arine zone, with the result that implete victory was won by our the enemy scoring not even as as a hit against the American is and losing one or more subma-

## WEYLER FIREBRAND IN SPAIN

The entire kingdom of Spain is in a state of uproar and disturbance. The constitutional guarantees have been suspended, the legislature has been prorogued, the operations of the civil and criminal courts have been arrested for the moment and martial law has been decreed throughout the length and breadth of the land. All these things contribute to an impossible situation. Of course there is a moving spirit behind all these military unions. Pronunciamentos would not have been revived, after all these years, as a factor in Spanish politics without some infflative, encouragement and guidance, These have been furnished by Captain General Weyler, marquis of Teneriffe, whose name is still held in sinister memory in the New World by reason of the crucities that signafized his reign as captain general of Cuba in the days when it still formed part of the colonial empire of Spain. Weyler is of

n origin, has relatives in Germany, and has always been very proud Prussian forebears, All his sympathies have been with Germany in the t war, and he has been since its commencement in close association the German ambassador, Prince Maximilian Hohenlohe, and with ex-

# NO MAN'S LAND, DEATH'S EDGE

Birds Return to Their Wonted Tress to Roost, Unmindful of the Thunder of Shelis.

To the whole world's wanderers, the American people, whose incurable habit it is to go everywhere and see all things, there yet remains one country unexplored, says a writer in an exchange. It is a country stranger than Hamman Meskutine (where you can boil eggs in a river) more ruinous than Pompell, or the Roman city of Tingad. and more sepulchral than the tombs of the kings of Thebes; it is a few hundred miles long and narrower than Egypt, and holds more buried heroes than Westminster abbey; it is to the casual eye as desolate as the Sahara, yet on closer investigation as populous as Bond street; it is more beautiful at night than the aurora borealis and yet more ominous than a picture by Sime; It is No Man's Land. And the things that are done there

are things that have never been done before and will not be done again in this generation; it is a thing to see as one would go to see Niagara if it was certain to run dry within a year and fall no more in our time; only it is more wonderful than Niagara, noisier, more magnificent, leaving a more abiding sense in the mind of having moved amongst gigantic things.

Life is more tense there than in equatorial forests where the rhinoceros comes out of the cactus at unexpected moments; the rhinoceros is only a large form of pig, yet he is morose and vindictive and has unpleasant ways, and can be, at his worst, as bad as a better-class German.

Strange vegetation is to be seen there, too; overgrown cabbages flour-Ishing where they will, free at last of their servitude to man, trees that have met with amazing calamity in storms that had never overtaken a wood before; strangest of all, the birds going home at their wonted hour to roost in their wonted trees, undisturbed by the thunder that is shaking the hills.

And there in No Man's Land, if anywhere in the world, may liberty be dreamed of walking along the line between the flare of the rockets and the pearest edge of the night, walking and blessing the ruined hamlet of France: for where else in the world has she been invoked before with such great sacrifice of heroic lives?

Scenes In a London Fog.

The season is evidently destined to be a good one from the fog lover's point of view-if there are any fog lovers, a writer in the Westminster Gazette (London) observed recently. The specimen that developed late one recent afternoon and was in its prime a couple of hours before midnight was a particularly fine one.

In a space that a good aerodrome could have inclosed I found a chauffeur looking with a lantern for landmarks, so that he could discover in which direction his car was bending; I saw a telegraph messenger fall off his bicycle in the middle of a quiet road, apparently from sheer perplexity; and I found three motor buses that came to rest with their bonnets close together in such a way as to suggest that each had been charging the other two and had only stopped just in time.

In the small hours of the morning I found another bus standing helpless by the roadside with the driver slumbering within, but the driver of a motor bus is a remarkable man lu many Ways.

Only Woman Jailer in World. Switzerland possesses the only woman failer in the world. She is governor and warder in the prison of Aigle, in ago she married the chief warder the prison and soon proved to be helpmate indeed, for, being a strongbuilt woman, and with proper notions of discipline, she made as good a jailer as her husband, and more than once dld his work when he was away. When he died the authorities asked her to take his place permanently, and she accepted. All the year round the Aigle prison contains from twelve to twenty male prisoners, sentenced to terms of imprisonment ranging from three months to three years, and although the woman-jailer has no assistants she has never had any trouble with the prisoners. Strict disciplinarian though she is, the woman-jailer has the kindliest of hearts, and takes great interest in her "guests," as she calls them. Many a prisoner has been set on the straight path again by her wise and kindly advice.

Styles of Trenches.

According to the description of German officer, the Germans divide their trenches into four different classes. There are, first, the rifle pits -shallow excavations dug by the soldier lying down under fire, about four feet long and two feet wide, with a low earth parapet pushed up in front second, the kneeling trench, a simple ditch about three feet wide; third, the standing trench, which has a shelf-like terrace running parallel with the bottom, where the men may stand and shoot; and last, the improved or permanent trench, wide and deep, with a trench "street" running along the lowest level, and a first shelf or terrace two feet higher for the trench garrison, and a second terrace two feet above the first and five feet below ground level where the men may mount to shoot.

Laboratory Equipment Costly. In a well-equipped laboratory for original research the various platinum dishes, crucibles and stirring rods have an aggregate weight of about 2,600 grams and an approximate value of \$5,000. The largest vessels are 21/2 inches in diameter and 1% inches in depth, weigh 40 grams each, and are worth about \$80 each. A single stirring rod may cost more than \$100.

Not Like Other Babies. "Mother!" "Yes, my son."

"Did you ever see a baby snake?" "Oh, yes; my boy." "Well, how does it amuse itself; 4t has no feet to play with?"

Now Systematically Straightened and Restored.

Defects Which Necessitate Removal and Replacement Develop in Eight to Fourteen Years-90 Per Cent Renewed.

It is not generally known that worn rails are now systematically straightened, the worn ends sawed off, and the whole rail restored to service condition. A plant in Illinois where this is done is described in the Railway Maintenance Engineer by John Reiner. All rails in main-line service, Mr. Reiner thinks, will ordinarily develop defects which necessitate removal and replacement in eight to fourteen years. These defects are buttered ends and worn fishings and, in curved track, flangeworn heads on the outside rails and crushed heads on the inside rails. Fully 90 per cent of these removed rails may be fitted for further service by appropriate treatment, Mr. Reiner assures us. He says in substance:

### Methods of Reclamation.

"There are two methods of reclaiming rails quite generally recognized as being efficient-one is to bent and reroll them, reducing the section and theoretically producing a new rail of the original length but of lighter section. The other is to assemble the rails at a centrally located point for inspection, classification, straightening, cropping worn ends, and reboring for splice-bars.

"From the writer's observation the process of rerolling rails after a service period is successful in that it prolongs their ultimate life over that of simply cropping battered and worn ends. The process, of course, is muc more costly than simply cropping the ends at a home plant, and unless the rerolling plant is in fairly close proxfinity to the road owning the rails, the auxiliary train line pipe in order to re cost is prohibitive.

"The desired effect of any method ! to get the largest possible return from the rails recovered, either in money or in service, which latter ultimately means money, but the value of which in money cannot, for want of data, be so defined in all cases

"At the plant under the writer's furisdiction the cost per ton for reclaiming rails during 1915 was 49 cents. In the Rhone valley. A good many years | the operations of this plant there were | Invention of Ohio Man is improvement reclaimed from scrap condition 2,443 tons of rails, 2,080 tons of which went for ordinary track service and 365 tons for the manufacture of frogs,

"Estimating the salvage value of serviceable rails recovered from serap at \$9 per ton, the operation of this plant shows a clear demonstrable gain

### Working on Rails. "Rails passing through the reclaim-

ing plant for resawing are pulled broadside on to the straightening machine (a home-made hydraulic press) hy a rope and a helt-drive drum handling from eight to twenty rolls at one time, After straightening, the rails are pulled broadside on to the saw table or carriage by means of a horizontal air-hoist manipulated by the straightener.

"After removing the rail from the saw-table, the chippers remove the fins or burrs raised by the saws and pass it broadside on to the drills, four of which are in service (two at each end). manned by four men and placed in staggered position so that four rail-

ends are drilled at one time. "Before the rails pass out of the mil to the sawed stock piles a man applies a template to the head of each raf marked by the sawyers as a main track or second quality rail to classify them according to depth or thickness The rollers leading out of the mill are manned by four men who distribute the rails and pile them in stock piles, Warning Siren Is Operated During or load them on ears direct, as de-

"Sorting the rails for condition and uniform thickness of head is of much value in obtaining good track results railroad crossings would be set in ac and economy in maintenance cost. The tion by the blast of the locomotive rails classed as sawed main-track ralls whistle some distance off. It is claimed are calipered for thickness of head and that by accurately co-ordinating the make as good track joints as new rails vibration pitch of the signal receiver if new or unworn joint fastenings are with the note of the locomotive whistle applied. The rails classed as second the system is quite practical, and that quality rafts are as safe as main-track it will not respond to other loud noises rails. They are more or less worn, but which are not correctly pitched. The will give good service in branch-line inventor would use the vibration of the main track. The ends will match up to receiver to close an electric circuit, an even surface as the heads are call- which would pass the current to pered the same as the heads of the warning siren in daylight and to a searchlight stop signal at night.

## Private Control of Reads.

Private control of railroads in England is a thing of the past. Government control was adopted as a war measure in August, 1914. It has worked so well that the principle will be retained when peace returns.

Raise Wages of Shopmen Federated shopmen on the Boston & Maine railroad have raised wagen two cents an hour for all crafts and secured a Saturday half holiday during fuly and August without less of pay

Make About Price.

Was Glad He Stopped Bullet Whiel Might Have Hit Driver of Car Loaded With Wounded.

In the course of the battle of the Marne, the Germans fought a stiff rear-guard action at Priez. At its height, Mr. Frederic Coleman, who narrates his experiences in his book, "From Mons to Ypres," found himself and his automobile involved in the proceedings.

One of the Sussex men, says Mr Coleman, came running back with the news of a general retirement. Rifle fire in front, rifle fire from our left, and shrupnel everywhere, made us wonder whether retirement was not less wise than staying where we were. But orders are orders; so we headed down the slope for the village, where had left the automobile.

Presently we reached a 50-foot gap in the bank at the roadside; that part of our journey must be taken in full sight of the enemy. Two soldiers rushed at it, only to fall before they had got across. While we paused, a herd of some twenty cows galloped, bellowing, down the hedge side in the field beside us. Blessed with an inspiration, we sprinted down the road in the lee of the barrier thus providentwhich the retention of a railroad wagon tally provided.

street, Brooklyn, N. Y., the Scientific druve up. "Yes," I answered, "All but one and I turned to look back at him.

"I stopped one, coming up the bill, he said, with a grin. "I stopped one proper, I did!" And he opened his tunte and showed me a blood-soaked side. "Might have got you if I hadn't been there," he added, "so perhaps it was just as well. I couldn't have brought the others back in this thing." And he grinned again.

"Good tuck, son," I said, with a lump In my throat

His teeth were set as he was horne away by two orderlies, but the corners of his mouth twitched in another half emile, and he said

"Thanks, Don't you worry about me,

I'm all right, It's nothing!" I have often thought of him since, and hoped that he came through in good shape. His spirit was so very very fine! - Youth's Companion,

## High Standards for Air Schools.

High standards of scholarship are to he maintained in the six governmen schools in military aeronautics which have recently been opened at the universities of Illinois, Ohio, Texus, Callfornia, Cornell and Massachusetts Institute of Technology. As a special incentive, those who attain a certain grade will be awarded a certificate marked "Passed With Honor." During the first eight weeks of the course, while the pupils remain on the ground, they will study such subjects as the care and operation of engines for air craft, the theory of flight, cross-country and general flying, including metearology, astronomy and photography, as well as gunnery and bombing, signaling and wireless. Each student will he required to pass a written examination before he graduates.—Popular Mechanics Magazine.

The story of a man's extraordinary bravery in jumping into the mouth of a blast furnace to rescue a fellowworkman was told at an inquest at Cleveland, Yorkshire. A man fell from the top of the furnace and was lying unconscience on the "hell" on which the iron ore is tipped before it is discharged into the furnace. George Welford, who is a chargeman, at once sprang a distance of five feet into the midst of a deadly gas fumes and intense heat, at the peril of his own life. He lifted the unconscious man-who was so hadly burned that he died af terwards-to the top of the furnace and then scrambled out, almost over come with the heat and fumes.

Risked Life for Another.

# Diseases of Teeth.

The use of gold as a substitute for lead or bone as a filling was perfected in 1855 by Dr. Robert Arthur of Baitimore, while in 1884 Prof. A. D. ler of Berlin, in his discovery of the bacteria origin of diseases of the teeth and of the large part played by lactic acid, opened the way to avenues of research which may ultimately lead to the total extinction of the dentist.

The Girl Knew.

"You know my eyesight has never been very good, and it's getting worse, "Well, I thought as much. You know my daughter always wants you for s

Nora McMurtry had p heard the story of Ruth She know the New Ter well, and she could have Adam and Noah were more or sponsible for the human race. in all, she delved very little into mysteries of literature, biblica otherwise. The past had little cance; what Nora cared about the present. For she was in love wi

Tommy Lyons. Tommy was twenty-one and No eighteen. To look at Tommy's are on would imagine that he was a rather than a plumber; and to look a the wealth of Norah's golden hatr we to gaze upon a treasure invaluable Tommy was six feet three, and Now was five feet two.

Possibly there was in Nora's action just the hint of the clinging-vine type of girl, but to Tommy it meant only loyalty. There was something about Nora which called for protection, and Tommy was perfectly willing to be the protector so long as he was sure "his giri." And he felt in his heart of hearts that Nora was his "forever

to have and to hold." They had been waiting for a year when one night in the early spring Tommy reached the McMurtry flat almost an hour before his usual time. "I didn't think you'd come so soon,

she announced. "But I'm glad you did. anyway. It means another hour to-

She seated herself at the top of the rather rickety steps and looked into Tommy's eyes, Tommy returned the look unwaveringly for a moment of two, and then guzed rather though "Girlie," he asked suddenly, "How

into the front sents, on the folded top would you like to go away from "I'd die if I had to live anywhere else," Nora answered instantly. "I've

lived in this town all my life." The light suddenly went out a Tommy's eyes. "Oh!" he said. "Then It's all off."

"What's all off?" "What I was going to "What was it?"

Tommy shook his head wearily. "Why do you like this town so?" "Why, I was born here," "In that any reason why you couldn't go away?"

"Go away where?" "Well, to a farm, for instance; up the slope became less steep, I overtook In the mountains, with green grant and cows and chickens and

"Oh!" Nora drew back impulaivaly "I'm afraid of a cow."

Tommy laughed rather shortly, "You're just like any other city girl. You don't know what it is to wake my at five o'clock in the morning and be the sun come up over the bills. Tou'l afraid of a cow which wouldn't hur even a kitten, and you don't sven

know that a duck lays eggs." There was a wietful light in the depths of Tommy's eyes. He was Hying for the moment his own box "I thought you liked it here," she

"I do like it a little, but that's only because you are here. Otherwise I

wouldn't stay another minute." "What would you do?" "I'd go back to the country." "Could you get a job up there?"

"Yes." "Is that what you were going to tell

"Yes?" "What kind of a job?" There was something in Nora's

voice which made Tommy suddenly glad again. "I got a letter from Nick Phillips this morning," he explained slowly. "Nick says that old man Glenwood is looking for a man and his wife to take over his farm for the summer. It means sixty dollars a month and all expenses, and the job has been offered to me. It's only open to a man and his wife. I thought perhaps that you

you won't leave the city." "Does it mean we can get man

might be willing to go. But you say

ried?" Nora asked softly. "Yes, it means just that." For a moment Nora was silent, Shrill cries of children playing in the street came to her; from the next block sounded the rumble of the street cars. Just for a few seconds she hadtated, and then her small hand crapt suddenly into Tommy's large one. Had she been a student of the Bible she might have said: "Entreat me not to leave thee or to return from following after thee; for whither thou goest, I will go; and where thou lodgest, I will lodge; thy people shall be my

people, and thy God my God." But being only Nora McMartry, with a big here in her heart for the man

beside her, she said simply: "Take the job, Tommy; I'll be the wife, and we can go together."

(Copyright, 1917, by the McClure Newspa-Obliterating Class Distinctions.

Modern and cultured persons, I believe, object to their children seeing kitchen company or being taught by woman like Peggotty. But surely it is more important to be educated in sense of human dignity and equ than in anything else in the world And a child who has once had to respect a kind and capable woman of the lower classes will respect the lower classes forever. The true way to over ome the evil in class distinctions is not to denounce them as revolution denounce them, but to ignore them as children ignore them. G. K. C.
